THE
EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

VOL. LVIII.

From January to December 1905.

LONDON:
FRANCIS HODGSON, 89 FARRINGDON STREET, E.C.

1905.

LONDON:
PRINTED BY C. F. HODGSON & SON,
2 NEWTON STREET, HIGH HOLBORN, W.C.

INDEX.

ARTICLES, &c.

Adams, Prof., on the Sunny Side of Egotism, 141.
 Adamson, Prof., on the Map in the Class-Room, 478.
 Alden, P., on a Visit to Danish High Schools, 427.
 American National Education Association, 394.
 Amsterdam — British - Dutch - Danish Summer Meeting, 427.
 Anson, Sir W., on Secondary Schools, 484.
 Anthropometric Survey, 134.
 Appointments and Vacancies, 19, 70, 140, 183, 215, 256, 296, 333, 390, 434, 496, 512.
 Arminjon, M. P., on a Visit to a Mohammedan University, 264.
 Assistant Masters' Conference, 437.
 Birmingham and University Ideals, 254.
 British Association — Educational Subjects, 396.
 Carpenter, Miss, Retirement of, 300.
 Chaos and Contradiction in Educational Thought, 259.
 Classical Study, 77.

COLLEGE OF PRECEPTORS:—

Evening Meetings: see below.
 General Meetings, 72, 334.
 Meetings of Council, 30, 76, 144, 188, 218, 258, 301, 336, 430, 470, 515.
 Pass Lists:—
 Teachers' Diploma Examination.—Christmas, 1904, 151; Midsummer, 1905, 471.
 Certificate Examination.—Christmas, 1904, 97, 152; Midsummer, 1905, 351, 429.
 Professional Preliminary Examination.—March, 1905, 188; September, 1905, 459.
 Lower Forms Examination.—Christmas, 1904, 110; Midsummer, 1905, 361.
 Certificate of Ability to Teach.—February and May, 1905, 301;
 Colonies, Technical Education in, 428.
 Consultative Committee's System of School Certificates, College of Preceptors on, 23.

CORRESPONDENCE:—

Angle, Definition of—E. Budden, 20.
 Education in Northern Europe—J. S. Thornton, 514.
 Evolution, Teaching of the Principles of, in Schools—J. A. R., 329.
 Inexact Sciences in the Schoolroom, Elementarius Olim, 258.
 Predicament of the Specialist—P. Cassé, 329.
 Registration of Teachers—G. C. Chambers, 79.
 Scotland and British Patriotism—D. Macrae, 292.
 Teachers for South Africa—J. O. Bevan, 514.
 Teachers' Register—Emeritus, 292; J. O. Bevan, 328.

 Danish High Schools, 427.
 Davis, R. F., on Four-Figure Logarithms, 188.
 Dewey, Prof., and Primary-School Methods, 395.
 Dewey, Prof., As to the Teacher, 133.
 Edson, A. W., on St. Louis Exhibits, 215.
 Education and Physical Conditions, 439.
 Educational Ladder, 327.
 Efficient Secondary-School Teacher, 216.
 Endowments, 18, 70, 140, 182, 214, 256, 296, 332, 389, 433, 476, 512.

EVENING MEETINGS at the College of Preceptors, Papers read at:—

Method of French Instruction: F. B. Kirkman, 26.
 Sunny Side of Egotism: Prof. J. Adams, 141.
 Teaching of Geography in Higher Classes: Prof. Lyde, 185.
 Science Teaching: T. Percy Nunn, 221.

Chaos and Contradiction in Present-Day Educational Thought: F. H. Hayward, 259.
 Sir Joshua Reynolds: Prof. Findlay, 298.
 The Map in the Class-Room: Prof. J. W. Adamson, 478.
 To Whom shall we teach Latin and Greek?: F. Storr, 517.

Findlay, Prof., on Sir Joshua Reynolds, 298.
 Fixtures, 17, 69, 139, 181, 213, 255, 295, 331, 289, 433, 475, 512.
 French Instruction, Method of, 26.
 Furness, Sir C., on Technical Education, 132.
 Geography, Teaching of, 185.
 Gorst, Sir John, on Education and Physical Conditions, 439.
 Gray, J., on Anthropometric Survey, 134.
 Halsbury, Lord, on Classical Study, 77.
 Halsbury, Lord, on University Ideals, 254.
 Harvard Memorial, 257.
 Hayward, F. H., on Chaos and Contradiction in Educational Thought, 259.
 Honours, 18, 69, 139, 182, 214, 256, 295, 331, 389, 433, 476, 512.

P., 272; Beard, W. F., 39, 40, 88, 89, 273, 344; Bell, A. H., 308, 345, 492, 493; Bickerdike, C., 236, 492; Biddle, D., 40, 156, 307, 447, 448; Blaikie, J., 88, 156, 197, 236, 272, 345, 447, 492, 531, 533; Blythe, W. H., 40, 236; Booth, W., 236; Brill, T., 533; Carson, J. H., 308; Catalan, Prof., 271; Cave, Frances E., 88, 89; Chartres, R., 89, 157, 196, 236, 346, 449, 492, 534; Christie, R. W. D., 196, 271, 272, 308, 309, 405, 447, 492, 532; Cochez,

Prof., 89, 533; Cotterill, T., 405, 406, 493; Crofton, Prof., 271, 308, 404; Cullen, J., 87; Cunningham, Lt.-Col., 39, 41, 87, 155, 156, 196, 197, 236, 271, 308, 448, 491, 493, 532; Davis, R. F., 39, 87, 88, 155, 156, 196, 197, 237, 271, 308, 309, 345, 492, 533; Dennis, T., 195, 271; Deprez, Prof., 235, 447; Dick, Hon. G. R., 404; Dolbbs, W. J., 345, 404, 491, 532; Droz-Farny, Prof., 155; Edwardes, D., 156; Emmerich, Prof., 89; Escott, Prof., 87, 156, 196, 492; Fletcher, W. C., 447; Ganguli, S., 404, 447; Genese, Prof., 156, 344; Gould, S. C., 235; Greenstreet, W. J., 492, 532, 533; Hardy, G. H., 235; Hatton, J. L. S., 273; Haughton, Prof., 87; Hillyer, C. E., 40; Holm, A., 196, 448, 493, 532; Hudson, Prof., 88, 195, 346; Isserlis, L., 406, 449; J. A. C., 448; Jackson, F. H., 344, 404; Johnston, J. A. H., 196, 235, 271, 273, 307, 309, 344, 406, 533; Knowles, R., 273; Lampe, Prof., 493, 533; Lauvigny, Prof., 308; Little, H. L., 492; McKenzie, E., 87; Marks, Constance I., 196, 533; Mayers, F. N., 271, 308, 345, 405, 532; Meissner, O., 491; Menon, A. V. K. K., 87, 155; Middlemass, E. W., 447; Murphy, A. J., 491; Nanson, Prof., 39, 40, 87, 89, 155, 156, 236, 272, 346, 405, 406, 448, 493; Nesbitt, A. M., 87, 89, 309, 404, 406, 449, 533; Neuberger, Prof., 39, 40, 156, 196, 273, 404, 406, 448, 449; O'Hara, C. W., 307; Orchard, Prof., 89, 236, 406, 447, 532, 533; Patrachan, K. S., 155, 307, 492; Ramachandran, T. B., 308; Rao, R. K., 532; Rau, K. D., 406, 447; Rau, B. H., 195; Reeves, F. W., 155, 406, 447; Riddell, H., 532, 533; Roach, T., 533; Ross, C. M., 41, 88, 89, 155, 157, 159, 236, 272, 273, 308, 404, 406, 448, 492, 533; Sanjana, Prof., 40, 41, 89, 155, 156, 197, 236, 237, 271, 272, 273, 308, 309, 404, 406, 532; Sastri, M. V. A., 87, 88, 448, 492; Scott, G., 39, 157; Scrimgeour, W., 155, 308; Searle, C., 236; Segar, H. W., 309; Seshu, P. V., 156; Sircom, Prof., 89; Sleigh, W. A., 345, 406; Sylvester, Prof., 196, 346; Taylor, H. M., 533; Thomas, R. A., 271; Tipple, E. F., 236; Tombe, A. S., 41, 156; Towusend, R., 237; Trachtenberg, H. L., 236, 532; Tucker, R., 40, 89, 155, 156, 159, 196, 197, 307, 308, 345, 492; Wallis, B. C., 344, 493, 533; Webb, H. A., 235; Webster, H. W., 345, 533; Weir, J., 156; Whitehead, R. F., 237, 271; Whitaker, R. J., 492, 533; Whitworth, Prebendary, 308; Wiggins, T., 41, 308; Williams, C. E., 533; Youngman, C. E., 39, 87, 344, 491, 533; Zerr, Prof., 157.

Mohammedan University, 264.
 National System of Education, 470.
 Natu, V. R., Education in India, 392.

NEW SCHOOL ARITHMETIC. By CHARLES PENDLEBURY, M.A. With or without Answers, 4s. 6d.; or in Two Parts, 2s. 6d. each.

* * The New School Arithmetic is to a great extent a new book, and not merely a revision of the present work. The original Arithmetic will also be kept in print, and will be revised and kept up to date with each new edition, as hitherto.

NEW SCHOOL EXAMPLES IN ARITHMETIC. Extracted from the above. With or without Answers, 3s.; or in Two Parts without Answers, 1s. 6d. and 2s.

ELEMENTARY ALGEBRA. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Revised Edition, 4s. 6d. Also in Parts. PART I. 2s. 6d.; or with Answers, 3s. PART II. With or without Answers, 2s. 6d.

Teacher's Edition, with the Answers to each set of Examples printed opposite them. Two Parts, 5s. net each.

EXAMPLES IN ALGEBRA. Extracted from the above. With or without Answers, 3s.; or in Two Parts without Answers, Part I., 1s. 6d.; Part II., 2s.

EXAMPLES IN ALGEBRA. By C. O. TUCKEY, M.A. Fourth Edition. With or without Answers, 3s.

These Examples are intended to provide a complete course of Elementary Algebra for classes in which the book work is supplied by the teacher.

A NEW TRIGONOMETRY FOR SCHOOLS. By W. G. BORCHARDT, M.A., and the Rev. A. D. PERROTT, M.A. 4s. 6d. Also in Two Parts, 2s. 6d. each.

The author's hope that this book will supply the need felt for a Trigonometry based on *four-figure Logarithm Tables*, the authorities responsible for the various Cambridge Examinations, Army Entrance Examinations, &c., now dispensing with seven-figure Logarithms. The book lays stress on the more *practical parts* of the subject. *Squared paper* is freely made use of, and 600 Miscellaneous Examples are provided.

ELEMENTARY GEOMETRY. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Complete Third Edition, Revised, 4s. 6d. Also in Parts. Books I.-III., Seventh Edition, Revised, 2s. 6d. Books I.-IV., Fourth Edition, 3s.

Also published in the following forms:—

Book I., 1s. Books I. and II., 1s. 6d. Books II. and III., 1s. 6d. Books III. and IV., 1s. 6d. Books II.-IV., 2s. 6d. Book IV., 1s. Books IV. and V., 2s. Book V., 1s. 6d. Books IV.-VII., 3s. Books V. and VI., 2s. 6d.

From Ginn & Company's History List.

BY E. P. CHEYNEY.

Professor of European History in the University of Pennsylvania.

A Short History of England.

Admirably adapted for use in Higher Secondary Schools. The earlier period is treated in some detail, with a view to a clearer understanding of the later story of events in the life of the nation. The book is illustrated with about one hundred and fifty original pen drawings, and some forty maps. 695 pp. ... 6 6

BY J. H. ROBINSON.

Professor of History in Columbia University.

An Introduction to the History of Western Europe.

Clear and interesting account of all important movements, customs, institutions, and achievements of Western Europe since the German Barbarians conquered the Roman Empire, the utmost pains having been taken to bring out the spirit and permanent results of each event and movement. 714 pp. Illustrated ... 7 6

"The work is very able and satisfactory."—*Educational Times.*

"The only satisfactory book known to me which includes mediæval and modern history within a single pair of covers."—J. S. LINDSEY in *School World.*

Readings in European History. Vol. I.

Selections follow chapter by chapter the history given above, and are culled from all sources—chronicles, memoirs, letters, as well as State papers, thus giving the liveliest sense of reality to current events and personages. 551 pp. ... 7 0

"The perusal of the book will make history more living, and the study thereof by our teachers and elder scholars will go far to give them a knowledge of history and, above all, a desire for more."—*School World.*

"This is the first adequate source-book of general history."—J. S. LINDSEY in *School World.*

BY P. V. N. MYERS.

Recently Professor of History and Political Economy in the University of Cincinnati.

Ancient History.

151 pages devoted to study of Eastern Nations from Antiquity to 527 B.C.; 230 pages to Greece; and 221 to Rome. Revised. 617 pp. Illustrated ... 7 6

General History.

For High Schools and Colleges. Complete outline of World's History from Eastern Nations to present time. Half leather. 759 pp. Illustrated. Maps ... 6

"The book is well written, well illustrated, conveniently divided, and, above all, it has the right perspective. The teacher likes the book to teach from; the boys like it to learn from, and use it freely for historical essay subjects. I have never hesitated to recommend it."—J. L. PATON, High Master of Manchester Grammar School.

History of Greece.

For Advanced Pupils. Emphasizes permanent elements of Greek History. Bibliographies after each chapter. 577 pp. Illustrated ... 6 0

History of Rome.

FROM WILLIAMS & NORGATE'S LIST.

Eugène's The Student's Comparative Grammar of the French Language, with an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises. By G. EUGÈNE FASNACHT, late French Master, Westminster School. 22nd Edition, thoroughly revised. Square crown 8vo, cloth, 5s. Or separately, Grammar, 3s.; Exercises, 2s. 6d.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern as well as of ancient languages. . . . The rules and observations are all scientifically classified and explained. . . . Mr. Eugène's book is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

Eugène's French Method.—Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. 17th Edition. Crown 8vo, cloth, 1s. 6d.

Roget (F. F.).—**First Steps in French History, Literature, and Philology.** Specially prepared for the Universities, Local, Army, and other Examinations, by F. F. ROGET, of Geneva University, and late Lecturer on the French Language and Literature and on Romance Philology in the University of St. Andrews. 3rd Edition. With Map. Crown 8vo, cloth, 5s.

"This manual will be a boon to many who have neither time nor inclination to work through a large volume on the history of French literature, but who yet desire to obtain a knowledge sufficient to enable them to pigeon-hole their reading of French prose and poetry."—*Educational Times*.

Delbos.—**The Student's Graduated French Reader,** for the use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., late of King's College, London. 12th Edition. 166 pp. Crown 8vo, cloth, 2s.

Delbos.—**The Student's Graduated French Reader.**—II. Second Year: Historical Pieces and Tales. 180 pp. 6th Edition. Crown 8vo, cloth, 2s.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

Boiëlle (Jas.) **French Composition through Lord Macaulay's English.** Edited, with Notes, Hints, and Introduction, by JAMES BOIËLLE, B.A. (Univ. Gall.), Senior French Master, Dulwich College, &c., &c. Crown 8vo, cloth, 3s. per Volume.

Vol. I. Frederick the Great. 2nd Edition. 3s. Vol. II. Warren Hastings. 3s. Vol. III. Lord Clive. 3s.

Victor Hugo. Les Misérables.—Les principaux Episodes. Edited, with Life and Notes, by J. BOIËLLE, Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s. 6d.

"May be pronounced a success. The selection has been made with judgment, and the notes are good."—*Athenæum*.

"A worthy addition to our stock of French reading-books which will be welcomed by numberless masters. . . . M. Boiëlle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.

Victor Hugo. Notre Dame de Paris.—Adapted for the use of Schools and Colleges by J. BOIËLLE, B.A., Senior French Master, Dulwich College. 2 Vols. Crown 8vo, cloth, each 3s.

"His notes abound in good renderings of sentences and phrases, opportune remarks on the proper meanings of words, and historical information necessary to elucidate the text."—*Athenæum*.

Weisse's Short Guide to German Idioms; being a Collection of the Idioms most in use; with Examination Papers. Cloth, 2s.

Complete School Catalogue post free upon application.

WILLIAMS & NORGATE 14 HENRIETTA STREET, LONDON, W.C.

BLACKIE & SON'S LIST

New Secondary School Catalogue post free on application.

Little French Classics

"The idea is an excellent one, and admirably carried out."—Prof. SAINTSBURY.
"A considerable boon to teachers and taught."—SPECTATOR.
"These little books supply a great want."—Dr. W. H. ROUSE.

This New Series, which is produced under the most competent editorship, embraces all classes of French Literature—Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama—so graduated in difficulty and so varied in matter as to be suitable for boys and girls of all ages. Many authors hitherto unobtainable in a suitable form for class reading are represented, as, for example, Bossuet, Balzac, Stendhal, Rousseau, and Pascal.

Price 4d. each Book. Complete Lists on application.

Little German Classics

Price 6d. each Book.

This New Series is uniform in aim and general appearance with the well known Series of "Little French Classics," which received so instant a welcome from teachers and pupils.

Goethe—Hermann und Dorothea. German Songs with Music. Kotzebue—Der gerade Weg der beste. Schiller—Select Ballads. Heine—Die Harzreise.	Heine—Select Ballads. The Nibelungenlied. Parts I. and II. Körner—Select Songs. Poems for Recitation. Goethe—The Road to Italy.
--	---

Little English Classics

Price (with a few exceptions) 2d.; cloth, 3d. each.

BLACKIE'S LITTLE ENGLISH CLASSICS contains some of the best-known and most representative Selections from Standard Authors. Poetry for the Young

ENGLISH POETRY FOR THE YOUNG.

Edited by S. E. WINBOLT, M.A.

Just published. Clearly printed. 264 pages. Price 1s.

The poems in this new book of verse will particularly appeal to young people, and are worthy to be printed in their memory. The patriotic vein has not been neglected. All the pieces by their subject-matter make a direct appeal, are vigorous in their expression, and in their moral tone tend to exalt the best instincts of human creatures. The chronological arrangement adopted cannot fail to give some sense of the historical development of English poetry.

New English Texts

Edited by W. H. D. ROUSE, D.Litt.

Messrs. BLACKIE & SON have commenced to issue, under the above title, a New Series of English Texts for School use. The Series will include specimens of all the acknowledged masters of English, each number being complete in itself, of a convenient size, well printed in clear type on good paper, and issued at a low price. Each book will have a brief introduction, but no notes. Price 8d. each.

Defoe's Plague Year.	Napier's Peninsular War.
Irving's Columbus.	North's Plutarch; Alexander.
Hawkins's Voyages.	Capt. J. Smith's Virginia.
Dickens—Christmas Carol.	Macaulay's Second Chapter.
Erasmus's Essays.	Gibbon's Fifty-first Chapter.
Essays from De Quincey.	Cook's Voyages.
Lamb's Essays.	Perry's Voyage to the East Indies.
Macaulay's First Chapter.	Raleigh's Discovery of Guiana.
Tales from the Decameron.	Tales from Arabian Nights.

Warwick Shakespeare

Edited by Prof. HERFORD, Litt.D. The best and most widely used edition of Shakespeare for School purposes. Prices 1s. and 1s. 6d.

The Series is in use in the following leading Schools, among very many others:—

Eton College.	The Charterhouse.	Wellington College.
Harrow School.	Newnham College.	Liverpool College.
St. Paul's School.	Girton College.	Dulwich College.
Rugby School.	Marlborough College.	Stonyhurst College.
King's College.	Rossall School.	Haileybury College.
Clifton College.	Malvern College.	Reading School.
Merchant Taylors'.	Winchester College.	Repton School.
City of London School.	Shrewsbury School.	Bradford Grammar School.

SELECT LIST OF SUITABLE TEXTS.

JULIUS CÆSAR. 1/- Ed. A. D. INNES, M.A.
(Warwick Shakespeare.)

"We have encountered few better works of the kind, and we heartily commend it on the score of common sense as well as of scholarship."—Speaker.

JULIUS CÆSAR. 1/- Ed. with Notes, &c.
(Picture Shakespeare.)

"The volume before us is not far from being an ideal school edition of Shakespeare."—Schoolmaster.

JULIUS CÆSAR. 8d. Ed. W. DENT.
(Junior Sch. Shakespeare.)

"It is a great gain to have such a cheap edition prepared by no mere hack-writer."—University Correspondent.

THE MERCHANT OF VENICE. 1/6 Ed. H. L. WITHERS.
(Warwick Shakespeare.)

"One of the best small editions that we have seen. . . . We heartily recommend this edition."—Journal of Education.

THE MERCHANT OF VENICE. 1/- Ed. with Notes, &c.
(Picture Shakespeare.)

The Athenæum says: "'The Picture Shakespeare' is decidedly attractive, the illustrations maintaining a high level throughout."

THE MERCHANT OF VENICE. 8d. Ed. G. H. ELY, B.A.
(Junior Sch. Shakespeare.)

KING LEAR. 1/6 Ed. D. N. SMITH, M.A.
(Warwick Shakespeare.)

"The editorial work is well done, and the student should be well equipped who has taken advantage of it."—Literary World.

GALLIC WAR. III., IV., V. 1/6 Ed. Prof. BROWN, M.A.
(Illustrated Classics.)

Book III. 1/6, IV. 1/6, V. 2/.

"By far the best edition of the third book that we have come across."—Practical Teacher.

HORACE—ODES III. 1/6 Ed. STEPHEN GWYNN.
(Illustrated Classics.)

"A useful piece of work, showing scholarship and taste, and the power of selecting what is necessary."—Spectator.

AENEID. BOOK III. 1/6 Ed. Prof. SANDFORD.
(Illustrated Classics.)

"We heartily commend this attractive text-book to the notice of teachers."—Academy.

ANABASIS I. 2/- Ed. C. E. BROWNRIGG.

ANABASIS II. 2/- Ed. Rev. G. H. NALL.

"Lucid in expression, marked by accurate scholarship, and as rich in matter as it is desirable for an elementary treatise to be."—Journal of Education.

The Educational Times.

The Proposals of the Consultative Committee.

THE Board of Education have taken to kite-flying. They have issued a set of Proposals as to examinations drawn up by the Consultative Committee, and have asked various teaching and examining bodies for criticisms upon them. The occasion for this attempt to recast the examination system which has gradually grown up in the country was a letter from the Head Masters' Conference pointing out the inconvenience caused by the multiplicity of examinations and by the varying demands made by professional bodies on aspirants to their ranks.

It is worth while to inquire how far the grievance is a serious one. No doubt there are hard cases, and there always will be, as long as the range and general curricula of schools are not exactly defined, and as boys are not placed *ab initio* in schools laid out for their future careers or compulsorily transferred to them at a later stage. In many large schools the difficulty is met by the formation of sides or departments—a plan which can be successfully adopted only where the numbers are considerable. But, after all, the complaint comes chiefly from classical schools called upon to send forth boys of fifteen or sixteen in a condition to undertake professional studies or to enter a house of business—required, in fact, to turn out a comparatively finished article in the middle of a curriculum only half completed. With this grievance before them on the one hand, and on the other with the knowledge of the German *Abiturientenexamen* and similar tests in Scandinavian countries, the Committee felt bound to work out some authoritative test covering the preliminary training expected of all aspirants to professional study or to a higher industrial or commercial career.

Two obvious courses were open to them—either to accept the existing system of independent examinations on a large scale, to co-ordinate them, and to fix approximately the relative value of their certificates, or to institute a State certificate examination of the same kind which would eventually swallow them up. The latter course would, they saw plainly, add, at any rate at first, to the number of examinations the multiplicity of which was denounced.

Other considerations came in. There exists in many quarters a distrust of examinations, especially of such as seem unduly to control the course of study and to encourage "cram." Further, the re-organization of the London University has introduced special examinations for "internal" students in which their teachers take part. Such examinations have been invented to meet the anomalous condition into which the University had drifted and to form an artificial substitute for the give-and-take of Oxford and Cambridge common-rooms, the members of which are, to adopt Lord Bowen's famous remark to his brother judges, "conscious of each other's imperfections."

Again, the doctrine of *Lehrfreiheit* is making considerable progress. Originality and initiative on the part of the teacher are at a premium. Not only do young lady teachers compile elaborate history lectures of doubtful quality in preference to following a good text-book, but it has been urged by good authorities, as must be familiar to those who have followed recent discussions on geometrical method, that every teacher should construct his own syllabus of geometry. In official quarters, too, the old system of "payment by results" is quite discredited in the field of elementary education, and the *ipse dixit* of the inspector has come to the front. All these influences may be traced in the proposals at which the Committee eventually arrived.

The foundation of these proposals is laid on regular inspection, such as is contemplated in the case of the schools seeking to earn grants under the new Regulations for Secondary Schools. For them inspection will probably be gratuitous, as it is already for elementary schools. But other schools, including all private schools, which are *ipso facto* ineligible for grants, must pay for inspection. Thus, at the outset, the benefits of the proposed system are to be confined to a comparatively small number of schools. To the system itself there are obvious objections. It postulates a separate set of papers for each school, to be drawn up by the external examiners after communication with the teachers. Nothing could be better for the estimation of the efficiency of a school and for the guidance of its teachers, but it involves a great deal of expense for the composition and printing of papers, an expense which none but a wealthy school could bear. In fact, the saving of such expense has been one of the causes which have fostered the growth of the examinations of the

Joint Board, the University Locals, and the College of Preceptors. When we come to the award of certificates, further objections arise. According to the Proposals, not only do the teachers supply their several syllabuses to the external examiners, but they co-operate with these in examining the papers, and the school career of each candidate is to be taken into account. It is at least doubtful whether the public will attach much value to a certificate in the award of which the teachers have a share. The cry of "branding your own herrings" is sure to be raised, however unreasonably. The external examiner, too, is placed in an awkward position. He has no longer the advantage of seeing the work of a large number of candidates so as to fix his standard of success and failure, but he is expected to make up his mind from the six or eight sets of answers produced by a single school. Most examiners would prefer the sweet simplicity of a large aggregate examination.

In face of all these difficulties it is to be hoped that the Board of Education will hesitate before adopting a revolutionary policy, and confine themselves to the simpler task, adumbrated in some of the "Proposals," of co-ordinating the examinations already in existence. It would certainly be the most English way of dealing with the question.

NOTES.

THE Association of Head Mistresses has been inquiring into "the true cost of education," and has issued a leaflet on the salaries of assistant mistresses, for the edification of the public generally and of the Education Committees particularly. The calculation is based on (1) the expense of equipment for the work—the capital invested—and (2) the cost of efficient living. Tables of the cost of living for educated women are exhibited in detail for salaries of £100, £120, and £150. While one would hesitate to reduce any of the figures, one could readily suggest the importance of increase in some of the items. The Association considers that a fully qualified teacher (with a degree, or its equivalent, and professional training) "should receive for her probationary year a salary of not less than £105 to £120," and for her second year "at least £120, rising to £150." "There should, however, be several higher posts in the school, at least three with salaries rising to £200, and in a fairly large school about four more at salaries rising to £180. In general, the senior classical, mathematical, and science mistresses should receive salaries rising to £180 or £200." The claim throws us back upon fees and endowments. In any case, "it is all-important that at this crisis in educational affairs the new Authorities should be in possession of all available facts," and liberality to teachers—that is, in point of the minimum salary—undoubtedly means more efficiency.

A TRENCHANT article by Mr. J. Horace Round in the *Monthly Review* for December upon the well worn subject of "The Bayeux Tapestry" illustrates once more the exceeding difficulty of establishing securely the truth of history in the face of tradition, prejudice, and loose scholarship. Mr. Round demolished Freeman's famous "palisade" at Senlac,

but now he champions Freeman against M. Marignan, who "challenges the authenticity of the Bayeux Tapestry as a contemporary and unique record of the life of the Conqueror's day." He finds that M. Marignan's work (a translation of which was published in English by Messrs. Bell half a dozen years back) is, in essential arguments, historical and archaeological, but "an instance of that power of self-deception possessed by the writer who sees facts in the light only of his own theory, and who makes them fit that theory whether they support it or not." Another persistent perversion still appears in some English histories for schools—the assertion that King John "signed" Magna Carta, not unfrequently clinched by a full-page illustration. John "sealed" the Charter; but where is the evidence that he did, or could, "sign" it? Once more: the picturesque remonstrance of King Robert Bruce with Randolph at Bannockburn, about a rose having fallen from his chaplet, continues to obscure the real significance of the military situation. And, by the way, how is it made out that Randolph was Bruce's "nephew"?

THERE is always interest, if not also profit, in seeing ourselves as others see us, even though their sight may be a little imperfect. Mr. Frank Pierrepont Graves, of the Teachers' College, University of Missouri, contributes to the November number of the *School Review* (Chicago) an unpretentious and pleasing description of "The Recent Commemoration at Oxford." We are gratified to learn that Lord Goschen "bears the stamp of Nature's nobility upon his face, as clearly imprinted as is his patent from the late Queen"—"a dignified, fine-looking man, with all the glory of old age and much of the vigour of youth"; and that Dr. Merry "fully lived up to his previous reputation" as "the only man in England that can cause an audience to ripple with laughter at Latin jokes." It must have been really more than "a trifle disappointing to see that our Howells was so little known." The applause, indeed, "was distinct and cordially given," but "it did not last long: the *Atlantic Monthly* and 'The Rise of Silas Lapham' must as yet be but names to many of our Oxonian friends." The young barbarians will have to attend Prof. Raleigh's lectures and learn something of the virtues of the famous Luminous Paint. Mr. Graves himself, however, is not quite perfect in the history of the distinguished men whose degrees he chronicles. If Dr. Monro is no more to him than "a distinguished Latinist," still Mr. Graves should know how to spell his name; and his description of the late Vice-Chancellor's "appearance"—well, it savours not of Oxford, but of the freedom of the Wild West.

MANY are the puzzlements of County Court judges. At Southend the other day arose the question of a witness's expenses, the witness being a schoolmaster, and claiming on the scale allowed for "gentlemen." Now, is a schoolmaster "possessed of some special knowledge and refinement, although without the advantage of any University education" a "gentleman" in the eye of the law? The judge decided in the negative. A legal contemporary has industriously rooted out Sir Thomas Smith's venerable

tome, "The Commonwealth of England," dating three centuries ago, and quotes from it (as Blackstone does) as follows:—

As for gentlemen, they be made good cheape in England. For who-soever studieth the lawes of the realme, who studieth in the universities, who professeth liberall sciences, and, to be shorte, who can live idly and without manuell labour, and will beare the port, charge, and countenance of a gentleman, he shall be called master, for that is the title which men give to esquires and other gentlemen, and shall be taken for a gentleman.

If "gentlemen" be "goode cheape in England," what of the non-university schoolmaster? But really, what is the law coming to if County Court judges, with equity jurisdiction, consider themselves bound to flout common sense under the letter of a text-writer of the Dark Ages?

UNFORTUNATELY we do not know the specific reasons that prevailed with the learned judge. The *Law Times*, with laudable thoroughness, has looked up the precedents. It finds that a buyer of silks, a solicitor's clerk out of regular work, a commission agent, and an audit office clerk have failed to qualify for the description while a person following country pursuits (a somewhat wide description) and sleeping partner in some businesses, a medical student, a dismissed coal agent out of work, and a person living on a parent's allowance have all been held to be "gentlemen" in law. There is no difficulty in seeing how all these decisions may be squared with Sir Thomas Smith's definition. If, however, we look at the table of Precedence, we find that the grades lower than gentlemen are yeomen, tradesmen, artificers, and labourers; and it seems still more difficult to range our schoolmaster in any of these four classes. It comes to this, then, that the poor man is nowhere—that, as "gentleman" is a name of "worship" (not of dignity), non-university schoolmaster is a name of no "worship." Truly, as Sir Edward Coke sagaciously remarks, "the law of England is a very particular thing."

SUMMARY OF THE MONTH.

THE London County Council have extended their system of County Scholarships from 600 to some 2,500, at an annual cost of £275,200. The essential change lies in the Junior County Scholarships. They are to be open to all such children of the age of eleven to twelve living within the administrative county as have been attending a public elementary school for at least two years; give free education up to fourteen; and are renewable for two years more. Where the parents' income is under £160, the scholars receive also £6 a year under fourteen, and £15 a year between fourteen and sixteen. Where the parents' income is over £160 and under £300, the scholars receive no money grants under fifteen, but £10 a year over fifteen. Whatever the parents' income, all scholars that enter into an agreement to become teachers receive £15 a year.

THE London Teachers' Association has sent to every member of the L.C.C. Education Committee a memorandum stating that the great blot in the whole scheme appears to be the desire to secure candidates for the teaching profession rather than to improve the general education of the children of London.

"This is shown," says the Association, "by (a) the selection of twice as many girls as boys—a great injustice to the latter; and (b) the restrictions on the continuance of the scholarships after fourteen, unless a bond to become teachers has been entered upon." The memorandum continues: "If the scheme is intended to induce girls to enter the teaching profession, it is admirably conceived; but, if it is to help us in our competition with foreign nations, it is obvious that more scholarships should be given to boys than to girls. Moreover, the parents of the poorest, and, in many cases, the most deserving,

scholarship holders will not be able to enter into a bond that their children, then fourteen, shall become teachers at sixteen, and enter a training college at nineteen, for they are often, as stated in the report, 'dock and other labourers, porters, carmen, charwomen, needlewomen, &c.' Whether intended or not, the suggested regulations will have the effect of depriving some of the poorest children of the advantages to which their intelligence and industry fairly entitle them, and which they have hitherto enjoyed."

The Association urges that the question of selecting pupil-teachers should be dealt with quite apart from the ordinary scholarship scheme.

At the suggestion of the Bishop, Lady Londonderry called a meeting of women of Durham (December 1) with the object of collecting funds for the local Church schools. In a long address, she discussed the position of elementary education under the Act of 1902, urged her hearers to band themselves together "and do all in our power to preserve our Church schools," and contended that "the great danger ahead of us is, not whether the children should be taught the tenets of this or that denomination, but whether they should be Christian at all." Lady Londonderry has subscribed £100 to the central fund.

At the annual general meeting of the Association of Principals and Lecturers in Training Colleges under Government inspection (December 19) the following resolution was adopted:—

That the supply and training of teachers is a matter of national importance, and as such should be dealt with by the Board of Education as the Central Authority, which should organize and direct local effort under a comprehensive scheme.

At the winter session of the General Medical Council (November 26) a report was considered from the Education Committee on the proposals for a school certificate submitted to the Council recently by the Board of Education. After discussion it was decided to inform the Board of Education (1) that any well considered plan which would tend to a diminution in the number of examinations in preliminary subjects of education, and to the unification of standard of those which remain, would meet with the hearty approval of the Medical Council. (2) That, if the standard of the examination contemplated in the scheme were such as to be generally accepted for matriculation by the universities, the Council would be prepared to recognize it as qualifying for entrance on a course of professional study. (3) That, pending the general adoption of a uniform system of unification of educational tests, the Council would welcome the establishment under the Board of Education of a central board for the purpose of classifying examinations according to standard and arranging for the mutual recognition of certificates; and, further, that they regard the establishment of such a board as highly desirable from an educational point of view.

THE Conference of Head Masters of Public Schools, at Christ's Hospital, Horsham (December 22-23), approved of the policy of providing that candidates for pupil-teacherships in public elementary schools should receive a substantial portion of their education in public secondary schools. The recommendations made by the Consultative Committee of the Board of Education for establishing a system of school certificates was referred to a committee with instructions to obtain in writing the opinions of every member of the Conference on the various points. The Conference passed, by a large majority, a resolution disagreeing with the proposals of the Syndicate of Cambridge University respecting Greek in the Previous Examination. They expressed a hope that the scheme for qualifying certificates in the examinations for Woolwich and Sandhurst will be so amended as to encourage the study of Latin. A prolonged discussion took place on the advisability of making membership of the cadet corps compulsory on boys in public schools. A few members, while desirous of promoting the spirit of patriotism, were afraid of the spirit of militarism: they thought conscription should not have its first start in the public school. Ultimately the whole subject was referred to a committee. The committee was asked to consider the Board of Education's syllabus on teaching English literature. It was also resolved to make a strong protest to the War Office against Latin being made only optional at Woolwich and Sandhurst examinations, and to ask for an amendment of the qualifying scheme.

A DEPUTATION from the Association of Chambers of Commerce

of the United Kingdom submitted the following resolution on commercial education to Lord Londonderry:—

That, in order to retain our industrial position and to introduce into this country such further industries as may be profitably developed, it is absolutely necessary to establish or acquire public secondary schools of the highest standard, and to provide sufficient inducements by bursaries, exhibitions, scholarships, or otherwise to make the efficient boys stay long enough to take full advantage of the provisions made for higher technical and higher commercial education.

Lord Londonderry in reply said that the establishment of secondary schools lay, not with the Board of Education, but with Local Authorities, on whom pressure should be brought to bear: the Board could ensure direction, but not supply. It was essentially a matter for co-operation between the public and the Government.

THE scholarships at King's School, Canterbury, have been awarded as follows:—Entrance Scholarships: D. H. Cowie (Miss Hardie, Folkestone, and King's School), P. G. E. Chave (Mr. Pearce, Ripley, and King's School), C. F. M. N. Ryan (Mr. Pulling, Kensington Preparatory School), C. J. Galpin (Junior King's School), G. C. W. Harker (Mr. Watson Willis, Eastbourne), for Mathematics, H. Nevill (Rev. R. J. Martin, St. Leonards), C. F. Freeborn (Mr. Jelf, Folkestone, and King's School), J. C. M. Leech (Mr. Faulkner, Purley), H. Parsons (Mr. Olive, Wimbledon, and King's School).—House Scholarships: C. M. Sutton (Mr. Pearce, Ripley), W. S. Barroll (Mr. Wallis, Westgate), A. N. I. Lilly (Mr. Watson Willis, Eastbourne).—Junior Foundation Scholarships: H. Townshend (for Mathematics), E. B. Hosking, A. R. Bellars—all of King's School.—Probationer Foundation Scholarships: D. H. Cowie (Miss Hardie, Folkestone, and King's School), C. F. M. N. Ryan (Mr. Pulling, Kensington Preparatory School), E. B. Nelson (Mr. Reynolds, Southbourne, and King's School), F. L. Goad (Junior King's School), D. A. Fardell (Junior King's School).

DR. FREDERIC ROSE has sent over from Stuttgart another instructive report, on German art-trade schools. Having traced the history of the rise and growth of these schools, he writes:

The general aim of the art-trade schools is briefly the application of art to industry, the endeavour to impart the methods and develop the facilities for the utilization of the graceful and harmonious in Nature in the production of the ordinary practical objects of trade and daily use. To durability and serviceability, the two cardinal principles necessary in the production of goods, are to be wedded grace of form and harmony of colour. The art-trade worker must not be a mere mechanical producer of useful wares, but must imbue his work with the sense of the beautiful drawn from the measure of his own talent and his contemplation and interpretation of the great book of Nature. The art-trade schools stand on a higher artistic level than the combined art-trade and artisans' schools. They stand in closer connexion to pure art, and endeavour to train technical artists (*technische Kunstler*), not art-skilled artisans (*kunstfertige Handwerker*). The art-trade schools also endeavour to give their instruction in the daytime to full-time pupils, whilst the combined art-trade and artisans' schools lay greater stress upon evening instruction.

HAVING explained the organization, curricula, and conduct of several of the schools, Dr. Rose sums up thus:

It is scarcely possible at present to utter a definite expression of opinion upon the relative merits and failings of the German art-trade schools, as many of them are of too recent origin, and others have only lately been reorganized. The movement in favour of art-trade instruction seems to be still in an experimental and tentative stage, and some time must yet elapse before anything like uniformity is attained in the methods of instruction or unanimity arrived at regarding the cardinal principles of art involved in art-trade instruction. Taken as a whole, with some exceptions, the art-trade schools have not attained the high-water mark of efficiency occupied by technical schools. A weak point is the paucity of instruction in workshops and the insufficient equipment and accommodation of those already installed. This has been caused by the lack of the necessary funds and by the failure to grasp the important rôle played by such workshops in art-trade instruction. These defects, however, are being rapidly remedied; the best proof of this being the large sums voted for new buildings and extensions and the considerable annual subsidies granted by Governments and Municipal Authorities for purposes of maintenance. The art-trade products of Germany show much that is desirable and praiseworthy, beside much that is wholly undesirable. But it is beyond reasonable doubt that the production of the former has been influenced by the art-trade schools, and that the production of the latter is due partly to manufacture solely for purposes of profit and partly to the indifference of an

undiscriminating public. However, good taste and superior manufacture, the fruits of the spread of art-trade instruction, are gradually, but surely, prevailing.

WE regret to note the death of the Rev. T. Roach, M.A., who was a contributor to our mathematical pages. Mr. Roach, son of a Gloucestershire parson, was educated at Marlborough and Cambridge, and held masterships at Lincoln, Repton, and Clifton. He took orders, but an infirmity of speech was against his success in the Church. Latterly, he settled in Hampshire, where he came into some note by his defence of the right of way in a lane by which William Rufus's body was brought to Winchester. The County Council took up the case and won it; but next day Mr. Roach had notice to quit from the baffled landlord. He died at Twyford.

ANOTHER ex-schoolmaster, the Rev. J. D. Williams, Vicar of Bottisham, has recently died at Barnwood Asylum at the age of seventy-five. He was an exceptionally brilliant scholar, still remembered by Cambridge men of his time. After an assistant mastership at Sherborne, he became for a short time Head Master of Christ's Hospital, London, then of Christ's College, Brecon. Unfortunately his talents were not fitted to stand the strain of practical life, and for many years he had been in painful seclusion; forgotten by those who still profit from his collaboration in Liddell and Scott's Dictionary.

WE deeply regret to record the premature death of Mrs. Brownrigg, wife of Mr. C. E. Brownrigg, Head Master of Magdalen College School and an esteemed contributor to our columns, after a severe illness of several weeks. "Deep and widespread sympathy," writes the Oxford correspondent of the *Times*, "is felt both in the University and in the city with Mr. Brownrigg, who is well known to both, and who loses thus prematurely one whose bright and happy disposition and devotion to the boys of the school had won her much esteem and warm affection."

Mrs. Brownrigg belonged to a well known Scotch family. She was Adolphine Mary, eldest daughter of the late William Arbuthnot by his marriage in 1855 to Margaret Rosa, daughter of John Campbell of Kilberry, Argyleshire. Mr. Arbuthnot's grandfather was Sir William Arbuthnot, who was Lord Provost of Edinburgh at the time of George IV.'s visit in 1822, and was created a baronet by the King in person. Sir William was of Aberdeenshire descent, and his mother belonged to the ancient Urquharts of Cromarty, who were for many centuries of great prominence in the North. A noted laird of this family had no fewer than twenty-five sons, seven of whom were killed at the battle of Pinkie. His grandson married the heiress of the Setons, of Meldrum, Aberdeenshire, and the descendants of this union now represent the house of Urquhart, the elder branch of Cromarty having died out. It will be remembered that the late Major Urquhart, of Meldrum, was killed in action at the battle of Atbara in 1898, when the estates passed to his sister. The most remarkable of the family, however, was Sir Thomas Urquhart, who took part in the risings in favour of Charles II. after the execution of Charles I. Being taken prisoner by Cromwell, he at once proceeded to show why his life should be spared by publishing an exhaustive account of his lineage, tracing the family descent from Ourqhartos, who married the Queen of the Amazons and was fifth in descent from Noah! After this it is hardly surprising to learn that Sir Thomas showed himself to be 153rd in succession from Adam. This fantastic and eccentric personage, however, achieved genuine distinction by his admirable translation of Rabelais, accomplishing one of the most perfect pieces of work of the kind ever executed. Sir Thomas's death, which took place abroad, was caused by an uncontrollable fit of laughter on hearing of the Restoration in 1660!

UNIVERSITIES.

Oxford. At a meeting of Congregation (November 29) the statute promulgated to exempt candidates for Honours in Mathematics and Natural Science from Greek in Responsions and in the Holy Scripture Examination, and to allow them to substitute French and German, was *non-placeted* by a majority of 36—200 to 164.

(From our own Correspondent.)

Cambridge. As the greatest changes are generally introduced with the least opposition, perhaps no member of the Senate has realized the revolutionary character of the Regulations for the new Diploma in Geography. Put shortly, the examination for the new Geography Special (on

which a candidate who has previously passed the General can proceed to the B.A. degree) becomes the first part of the examination for the Diploma, while the second part deals with more advanced subjects. Candidates who have already passed the first Diploma Examination shall be deemed to have passed the Special, and *vice versa*. Now, suppose a man has passed the General in his fourth term, having previously taken Part I. of the Diploma Examination: he is in the happy position of having nothing to do for the next five terms but wait till in due course of time he takes his B.A. degree. Surely the diploma which does not necessitate residence will compare rather favourably with the B.A. degree.

The Diploma of Public Health and the Tropical Medicine Certificate are other examples of a similar process. Undoubtedly examinations are an evil, and, if they have to be, it is better that they should be in the hands of competent and impartial bodies. In the case of mining studies, a somewhat similar position arises, and a Syndicate has dealt with the matter in a very thorough and satisfactory manner. The Colliery Act of 1903 enables the Secretary of State to issue certificates to candidates who have had three years' practical experience of mining (instead of five, as formerly) provided such persons have spent two years at a college or institution where mining science is taught. A Diploma in Mining Engineering may be obtained by candidates who reach the Honours standard in Chemistry and Geology in the special examination papers on Structures, Heat-Engines, and Electricity. So far the University examinations are utilized. Three months must be spent in practical mining (a very useful way of employing a Long Vacation); and, after the candidate has obtained a certificate of having done this practical work, he has further to qualify in subjects connected with the application of science to mining. We shall not, it is hoped, see Cambridge men any more going to various institutions to learn the elementary principles of mechanical science as applied to mining.

Prof. Woodhead has been agitating for the creation of a Lectureship in Special Pathology. The Professor is nothing if not original: he has obtained almost the whole of the endowment from his friends in Huddersfield, and the name of that town is to be associated with the new lectureship. This excellent example might, with advantage, be followed. Leeds, Halifax, Bradford, Nottingham, Newcastle could all be accommodated with appropriate subjects.

Mr. F. F. Blackman, of St. John's, has been appointed to the vacant Readership in Botany. The gentleman in question knows a good deal about men and music, and has tried to find out several things about pictures and plants. For several years he has been carrying on research work entailing visits to his workshop at short intervals during the day and night. He is probably better known than any other person to the police on night duty in Cambridge. He has plenty of ideas and no enemies.

The Greek discussion has now passed its first stage. The debate was admirably arranged by the Vice-Chancellor, the genial Master of Trinity Hall, whose tact and humour throughout the proceedings kept the ball rolling to the very end. With few exceptions the speeches were disappointing, being generally tirades against Greek as a compulsory subject or panegyrics of the subject from those who defended the *status quo*. For the promoters the honours were shared by the President of Queens' and the Master of Trinity, while two Emmanuel men, Dr. Adam and Dr. Giles, stood out pre-eminently as the ablest exponents of the pro-Greek arguments. Unfortunately, neither side had much to say on the actual proposals of the report to make Greek an optional subject in the Little-Go. Hardly any of the speakers realized that, if Greek departs from the Little-Go, it must of necessity be lost to the General; yet almost all those who spoke in favour of the report used as an argument that the present requirements pressed unduly upon the Honour men in science and mathematics, and would like the relief limited to the cases where the evil is most felt.

Now, suppose the new proposals are carried: it is absolutely certain that Greek will disappear in all the secondary schools which are not of the highest rank, and the poll man will either have to start Greek as a new subject, or, if alternatives are allowed in Cambridge, will have to learn the language for his ordination if he contemplates taking Holy Orders. Doubtless the amended report will put the issues more clearly before the Senate; but at present, if the voting had to be on the report Aye or No, it would be impossible to satisfy anybody. One speaker, who confessed that he was in a quasi-Athanasian position, deplored

the fact that the University was trying to suit the convenience of the schools instead of taking its courage in both hands and laying down what it thought right. Dr. Jackson, with happy phrasing, described the additional subjects of the Little-Go as the vermiform appendix; while another speaker, in reply to an insinuation that the report reeked of commercialism, remarked that he had no objection to commercial men, but had grave objections to the commercial mind, especially when animating a learned body. Paper war will begin next term.

The politicians have been busy. Sir John Gorst has been solemnly given notice to quit by a majority of 46 to 4, but is resolved to fight, being persuaded that he is a victim to those wicked tariff reformers. Unfortunately those who were the leading parties in the movement are known to be free traders. If a Cabinet Minister is willing to accept the invitation to stand for the University, we shall see a pretty fight between a member of the Government and a nominal supporter of the same, with a possible *tertium quid* in the shape of a Radical candidate.

The football match ended, as was foreshadowed in these notes, in a victory for Cambridge, which shows the immorality of betting in general, and of laying the odds of 3 to 1 on the worse team in particular.

REGULATIONS and courses of instruction in military London. subjects during the coming session have been issued. Colonel H. A. Sawyer, P.S.C., will commence courses on (1) Military History and Strategy and (2) Military Topography, January 16; and a course on (3) Military Engineering on January 19. Lt.-Col. F. N. Maude, P.S.C., late R.E., will commence two courses on (1) Military Law and Administration, on January 18, and (2) Tactics, on January 19. Each course will consist of twenty lectures. All the courses will be delivered at the University, South Kensington.

It will be remembered that last spring Trinity Dublin. College, Dublin, offered its *ad eundem* degrees to women who have passed examinations at Cambridge and Oxford which would have entitled them to degrees had they been admitted to membership of their University. In connexion with this, the Clothworkers' Company, which for more than twenty years has generously given a scholarship to each of the women's colleges at Oxford and Cambridge, has further shown its interest in the cause of education by offering an honorarium of £10 to each of its women scholars past and present, to enable them to defray the cost of taking the Trinity College, Dublin, degrees. It is understood that the offer of the Trinity degrees to women who have not studied in Dublin will not remain open after 1907.

Trinity College has also passed a decree establishing scholarships for women similar in all material respects to the foundation scholarships which, by the statutes of the college, are tenable only by men: the value is £30 a year for five years. It has also passed a decree establishing six entrance scholarships of £20 a year for two years, and six of £15 a year for two years, to be awarded to male and female students who shall have been most successful in the Senior and Middle Grade Examinations of the Board of Intermediate Education in Ireland—a very important reform, introducing for the first time the principle of co-ordination between university and secondary education in Ireland.

CURRENT EVENTS.

THE Half-yearly General Meeting of the members of the College of Preceptors will take place on Saturday, January 28.

THE first of a course of twelve lectures to teachers on "The Psychological and Logical Foundations of Intellectual Education," by W. E. Johnson, M.A., Sidgwick Lecturer on Moral Science in the University of Cambridge, will be delivered at the College of Preceptors on February 9.

PUBLIC Newmarch Lectures, on "Vital Statistics," will be delivered by Mr. Yule at University College, London, on January 20 and 27, at 5.30 p.m.

THE Incorporated Association of Head Masters will hold their annual general meeting at the Guildhall (London) on

January 11, 12; the Incorporated Association of Masters in Secondary Schools, at Mercers' School, Holborn, W.C., on January 4, 5; the Private Schools' Association (Incorporated), at the College of Preceptors (probably), on March 3, 4; the Incorporated Association of Assistant Mistresses in Public Secondary Schools, at Dr. Williams's Library, Gordon Square, W.C., on January 14; and the Public Schools Science Masters' Association, at Westminster School, on January 14.

* * *

THE third annual meeting of the North of England Education Conference will be held in St. George's Hall, Liverpool, on January 6 and 7.

The subjects of discussion on January 6 will be: Leaving Certificates, Manual Training and its place in an Educational Curriculum, the Teaching of Geography, and Child-Study; on January 7, Scholarships (with special reference to the co-ordination of Education), the Teaching of Domestic Science, School Games (with special reference to Day Schools), and the Teaching of English. An exhibition of geographical appliances, prepared and lent by the Geographical Association, will be open in the Hall of the Central Technical School.

* * *

A CONFERENCE of the Incorporated Society of Musicians will be held in Manchester, January 2-7. Addresses of special interest and practical value are expected from Sir F. Bridge, Mr. W. A. Cruickshank, Mus.B. Oxon., Mr. James Dawber, Mus.B. Cantab., and others.

* * *

THE National Diploma Examination in Agriculture will be held at the Yorkshire College, Leeds, in the week commencing May 8, and the Dairying Examination will commence at Reading on September 18, and at Kilmarnock on September 25. Entries must be made by March 31 and August 31 respectively on forms obtainable from the Royal Agricultural Society, 13 Hanover Square, London, W., or the Highland and Agricultural Society of Scotland, 3 George IV. Bridge, Edinburgh.

* * *

THE Oxford University Dramatic Society will produce "The Clouds" of Aristophanes in March. Evening performances, March 1, 2, 3, 4, 6, 7; *matinées*, March 2, 4, and 6. The music has been specially composed by Sir Hubert Parry, Bart.

THE Nobel Prizes (140,858 kroner, about £7,825, each) have been awarded as follows:—
Honours. for Physics, to Lord Rayleigh; for Chemistry, to Sir William Ramsay, K.C.B., Professor of Chemistry at University College, London; for Medicine and Physiology, to M. Pavloff, Professor at the Military Academy of Medicine, St. Petersburg; for Literature, to M. Mistral, the Provençal poet, and Don José Echegaray, the Spanish dramatist, jointly. The Nobel Peace Prize has been awarded to the Institute of International Law.

* * *

THE University of Glasgow has conferred the honorary degree of LL.D. on Princess Louise, Duchess of Argyll; Lord Ailsa; Dr. James Thomson Bottomley, F.R.S., Arnott and Thomson Demonstrator in Experimental Physics in the University for twenty-four years from 1875; Dr. James Donaldson, Principal of the University of St. Andrews; Admiral Sir John Charles Dalrymple-Hay, F.R.S.; the Very Rev. Dr. John Marshall Lang, Principal of the University of Aberdeen; Mr. Guglielmo Marconi; Mr. Andrew Graham Murray, M.P., Secretary for Scotland; the Hon. Charles A. Parsons, F.R.S.; and Sir John Ure Primrose, Lord Provost of Glasgow.

* * *

THE University of Dublin has conferred the honorary degree of M.D. on Sir Frederick Treves; and the honorary degree of D.Sc. on Major Ronald Ross.

Endowments and Benefactions.

THE University of Chicago has received 2,500,000 dollars from its munificent benefactor Mr. J. D. Rockefeller, to found a School of Engineering. Mr. Rockefeller will also provide buildings.

* * *

THE late Mr. G. T. B. Wigan bequeathed to the University of Cambridge £9,000, the interest on which is to be devoted to the promotion of scientific education and research.

* * *

A SCHOLARSHIP of £80, tenable for three years at Christ's College, Cambridge, by a student of the McGill University, Montreal, has been provided by anonymous donors.

* * *

THE Salters' Company has given £250 to the Institute of Medical Sciences Fund of the University of London.

* * *

MR. RICHARD PEYTON has given £10,000 to endow a Chair of Music in the University of Birmingham; and Sir John Holder, a member of the University Council, has offered £1,000 towards the purposes of the Chair.

* * *

UNDER the will of the late Mr. Francis McClean, F.R.S., the University of Birmingham obtains £5,000 for the Department of Physical Science.

* * *

SIR DONALD CURRIE has given £25,000 to the University of Edinburgh, mainly for the remuneration of a staff of lecturers. The University appeal for funds has brought in some £15,000 more for laboratories and research.

* * *

AN anonymous donor has offered £5,000 to Trinity College, Dublin, towards the new scheme of entrance exhibitions.

* * *

UNDER the will of the late Mr. William Knox, grain importer, Aberdeen, the University of Aberdeen obtains £1,500 for Divinity bursaries, £1,500 for Medical bursaries, and £2,000 for a scholarship in Arts; and the Aberdeen Free Church College obtains £4,000 for Theological scholarships. The bequests are subject to a life rent.

* * *

PROF. GAILLOWAY has presented to Cardiff University College a valuable collection of lantern slides, diagrams, and apparatus for the use of the Mining Department.

* * *

AN appeal, headed by the Warden (the Bishop of Rochester), is made for £13,000 to extend and complete the buildings of Lady Margaret Hall, Oxford. Contributions to Mrs. Arnold Toynbee, 10 Norham Gardens, Oxford, Hon. Treasurer.

* * *

MR. CARNEGIE has founded two scholarships entitling the holders to free tuition for three years at the Guildhall School of Music. Mr. Carnegie is an honorary freeman of the Musicians' Company.

* * *

MESSRS. WERNHER, BEIT, & Co. have contributed £150 to the fund of the London Chamber of Commerce for the promotion of educational work.

* * *

THE Mill Hill School Centenary subscription list has been opened with an anonymous gift of £10,000.

* * *

EARL COWPER, Chairman of the governing body of Hertford Grammar School, proposes to endow the school with a sum yielding £120 a year.

Scholarships
and Prizes.

JESUS COLLEGE, OXFORD, offers various scholarships and exhibitions, without restriction as to age. Examination begins

January 17. Particulars from the Senior Tutor.

* * *

THE King of Siam has contributed £100 to the fund for Scholarships in Oriental Literature intended to commemorate the work of the late Sir Edwin Arnold.

Appointments
and Vacancies.

MR. JOHN STRUTHERS, M.A., First Assistant Secretary in the Scotch Education Department, succeeds Sir Henry Craik; and Mr. George Todd, M.A., takes Mr. Struthers's place as Head of the Department in Edinburgh.

* * *

DR. NORMAN MOORE, M.D., F.R.C.P., Chairman of the Board of Advanced Medical Studies of the University of London, and representative of the Royal College of Physicians on the General Medical Council, has been appointed a member of the Consultative Committee of the Board of Education, in room of Dr. Windle, who has resigned his membership on appointment as President of Queen's College, Cork.

* * *

MR. THOMAS CASE, Waynflete Professor of Moral and Metaphysical Philosophy, Oxford, and Fellow of Magdalen, has been elected President of Corpus Christi College, in succession to the late Dr. Fowler.

* * *

PROF. H. S. HELE-SHAW, LL.D., F.R.S., of Liverpool University, has accepted the post of Principal of the Transvaal Technical Institute and Organizer of Technical Education in the Transvaal for one year. This has involved his resignation of the Professorship of Engineering which he has held for nearly twenty years.

* * *

PROF. ARTHUR ROBINSON, of King's College, London, has been appointed to the Chair of Anatomy in the University of Birmingham, in succession to Prof. Windle.

* * *

SIR EDWARD ELGAR, Mus.D., has accepted the Professorship of Music in the University of Birmingham.

* * *

MR. J. CHURTON COLLINS, M.A., has been appointed Professor of English Literature in the University of Birmingham.

* * *

MR. JOHN WARDELL, M.A., Reader in History, has been appointed Professor of Modern History, in Trinity College, Dublin, in succession to Prof. Bury.

* * *

MR. EMIL ALPHONSE WERNER, Assistant to the Professor of Chemistry, has been appointed to the new Professorship of Applied Chemistry in Trinity College, Dublin.

* * *

MR. J. H. HOPKINSON, Lecturer in Greek in Birmingham University, has been appointed Warden of the Hulme Hall in the University of Manchester.

* * *

MRS. JESSIE WHITE, D.Sc. Lond., has resigned the Vice-Principalship and Head Mistress-ship of the Home and Colonial School Society's Training College and High School for Girls, Highbury Hill House, and will retire at the close of the Spring term.

* * *

MISS MARY MORTON has been appointed head of the Training Department for Secondary Teachers in Bedford College for Women.

MR. D. A. WYNNE-WILLSON, M.A. Oxon., modern language master, St. Edward's School, Oxford, has been appointed assistant master at Gresham's School, Norfolk.

* * *

MR. L. W. R. MERMAGEN, Stevenage School, has been appointed assistant master in Aylesbury Grammar School.

* * *

MR. ALBERT EDWARD PEATFIELD, B.Sc., goes from High Wycombe to the High School, South Shore, Blackpool.

Literary
Items.

APART from general matter, the *Geographical Teacher* for October gives a compact account of the Eighth International Geographic Congress at New York (September 13-14), with pointed abstracts of papers, a list of recent geographical works (supplementary to that given in Dr. H. R. Mill's "Hints to Teachers"), an outline of the geographical courses in the universities and university colleges of the United Kingdom in the current session, and a continuation of "A Regional Bibliography of the United Kingdom." Most useful for reference.

* * *

MESSRS. LONGMANS promise immediately a new edition of the recent Report of the Director of Education in the Transvaal and Orange River Colony for November, 1900, to February, 1904.

* * *

THE Gresham Publishing Company announce a comprehensive work on "Modern Electric Practice" in six volumes, profusely illustrated, under the editorship of Magnus Maclean, M.A., D.Sc., Professor of Electrical Engineering in the Glasgow and West of Scotland Technical College. There will be some three dozen contributors, experts in special departments.

* * *

THE Christmas number of *Occasional Papers* is a worthy effort to foster the taste for a higher class of periodical literature. Mr. A. Acland Allen, L.C.C., shows how London deals with "The Care of Feeble-minded Children"; and a fine reproduction of the Madonna della Sedia of Raphael is given as a supplement.

* * *

THE *Educational Review* (New York) of December contains the most interesting oration delivered by President Butler (October 31), in commemoration of the 150th anniversary of the foundation of King's College, now Columbia University.

* * *

THE *Independent Review* for January has three important articles on home policy—"Finance and the Drink Traffic," "The Unemployed," and "The Army and the People"—with the usual complement of various interests. "The Ideas of Anatole France" should attract literary students.

* * *

DR. JOACHIM, with the assistance of Prof. Andreas Moser (one of his former pupils), is preparing an account of his method of teaching and its results, in three volumes. The first volume will be published presently by Mr. A. Lengnick, of Berners Street.

* * *

A SPECIAL feature of interest in Messrs. Williams & Norgate's "International Book Circular, 139"—an extremely helpful list of current foreign literature—is a series of twenty portraits of contemporary foreign chemists of eminence, with an article by M. O. Forster on the more recent advances they have made in the study of the subject.

* * *

THE Westminster Play, the "Andria" of Terence, was performed with marked success.

TEACHERS' REGISTRATION COUNCIL.

IMPORTANT NOTICE.

THE attention of teachers in secondary schools is specially called to the impending expiration of the "grace" clauses of the Regulations for Registration in Column B.

Applications under Regulation 5 (2) *b* (ten years' service clause) must be received at the Council's offices, 49 and 50 Parliament Street, S.W., on or before March 5, 1905.

Applications under Regulation 4, under which clause training is not obligatory, must be received on or before March 5, 1906.

Copies of the Regulations and forms to be filled in may be obtained on application to the Registrar.

CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

THE DEFINITION OF "ANGLE."

To the Editor of "The Educational Times."

SIR,—Whilst thanking your reviewer for his notice of my "Elementary Pure Geometry," may I point out that the following statement may be misleading to some readers, viz.:—"The first definition of an angle as a *figure* ignores the idea of an angle as formed by two lines one of which revolves, an idea which is not only nearer the true connotation, but has been found practically to give rise to less confusion in the beginner's mind than any other suggestion."

This implies that *figure* is one suggestion which has been tried but found wanting. Now, as a matter of fact, the "rotation"

idea of angle replaced "inclination" or "opening," but *not* "figure," which is quite new (first used, I believe, by Messrs. Godfrey and Siddons, though I had adopted it independently). And whilst a "rotation" angle is meaningless without the figure of two lines, an angle of two lines (*e.g.*, two edges of a page) can exist as a figure without rotation. Figure is thus fundamental to the concept of an angle, and is, therefore, the proper definition. The conception of *magnitude* in the figure of an angle is easily supplied by folding, and by use of the protractor.

The definition completes the series of rectilinear figures thus: one line, straight line; two lines, angle; three, triangle; and so on.

The difficulty of defining "angle" would never have existed had we had originally a separate name—*e.g.*, "gonth" for the concept of angular magnitude, as we have "length" for linear magnitude. Unfortunately, the earliest definitions—"inclination," &c.—of angle as magnitude have obscured the question, and the rotation definition belongs to the same class as these. No one wishes to define "straight line" as length.—I am, Sir, &c.

E. BUDDEN.

[The definition of an angle as a figure is, as Mr. Budden says, new; therefore, I never intended that it had already caused confusion, which, however, I anticipated that it would cause. Whether it will or not is a matter of opinion. Let the external examiner of Mr. Budden's beginners decide.—THE REVIEWER.]

THE HERTFORDSHIRE BIBLICAL SYLLABUS.

To the Editor of "The Educational Times."

SIR,—I am very glad that Dr. Hayward should find himself in agreement with us. It is perhaps the more satisfactory as I had never seen his book, nor (I believe) had Dr. Whitehouse. If others hold these views of Biblical education, possibly we may have it put on wiser lines in many parts of England.—I am, Sir, &c.

T. C. FRY.

Berkhamsted School, Herts.

November 30, 1904.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ.

Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.**

Annual Income, **£398,982.**

Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT
NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopalian Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Granddaughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (See Prospectus.)

MACMILLAN & CO.'S LIST.

By H. S. HALL, M.A., and F. H. STEVENS, M.A.

AN ELEMENTARY COURSE OF MATHEMATICS, comprising Arithmetic, Algebra, and Geometry. Globe 8vo, 2s. 6d.

AN INTRODUCTION TO THE CALCULUS. Based on Graphical Methods. By GEORGE A. GIBSON, M.A., F.R.S.E., Professor of Mathematics in the Glasgow and West of Scotland Technical College. Crown 8vo, 3s. 6d.

AN ELEMENTARY TREATISE ON GRAPHS. By GEORGE A. GIBSON, M.A., F.R.S.E., Professor of Mathematics in the Glasgow and West of Scotland Technical College. Globe 8vo, 3s. 6d.

New Works on Geometry to meet the New Requirements.

A NEW GEOMETRY FOR SCHOOLS. By S. BARNARD, M.A., Assistant Master at Rugby School, late Fellow and Lecturer at Emmanuel College, Cambridge; and J. M. CHILD, B.A. Cantab., Lecturer in Mathematics, Technical College, Derby. Crown 8vo, 4s. 6d.

A NEW GEOMETRY FOR JUNIOR FORMS. By S. BARNARD, M.A., and J. M. CHILD, B.A. Cantab. Crown 8vo, 2s. 6d.

** This volume contains all the Practical and Theoretical Geometry required for a pass by Junior Candidates in the University Locals.

A NEW GEOMETRY FOR SENIOR FORMS. By S. BARNARD, M.A., and J. M. CHILD, B.A. Crown 8vo, 3s. 6d.

PART IV. JUST PUBLISHED.

THEORETICAL GEOMETRY FOR BEGINNERS. By C. H. ALLCOCK, Senior Mathematical Master at Eton. Parts I., II., III., and IV. Globe 8vo, 1s. 6d. each.

PRACTICAL GEOMETRY FOR BEGINNERS. By V. LE NEVE FOSTER and F. W. DOBBS, Assistant Masters at Eton College. Crown 4to, 2s. 6d.

PRACTICAL EXERCISES IN GEOMETRY. By W. D. EGGAR, M.A., Assistant Master at Eton College. Revised Edition, with Answers. Globe 8vo, 2s. 6d.

SHAKESPEREAN TRAGEDY. Lectures on Hamlet, Othello, King Lear, and Macbeth. By A. C. BRADLEY, LL.D., Litt.D., Professor of Poetry in the University of Oxford. 8vo, 10s. net.

HOOPER and GRAHAM SERIES. New Vols.

SPANISH COMMERCIAL PRACTICE connected with the Export and Import Trade to and from Spain, the Spanish Colonies, and the Countries where Spanish is the recognized Language of Commerce. By JAMES GRAHAM and GEORGE A. OLIVER. Part I. Crown 8vo, 2s. 6d.

FRENCH COMMERCIAL PRACTICE connected with the Export and Import Trade to and from France, the French Colonies, and the Countries where French is the recognized Language of Commerce. By JAMES GRAHAM and GEORGE A. S. OLIVER. Part I. Crown 8vo, 2s. 6d.

GERMAN COMMERCIAL PRACTICE connected with the Export and Import Trade to and from Germany, the German Colonies, and the Countries where German is the recognized Language of Commerce. By JAMES GRAHAM and GEORGE A. S. OLIVER. Part I. Crown 8vo, 2s. 6d.

MODERN BOOK-KEEPING AND ACCOUNTS. By WM. ADGIE, F.C.A. Crown 8vo. Complete in 1 Vol., 5s., or Part I., 1s. 6d., Part II., 2s., Part III., 2s. 6d. KEY to Parts I., II., and III. 2s. 6d. net each.

LITHOGRAPHED MODEL WORKED EXERCISES. Elementary, Intermediate, and Advanced. 6d.

PARTS I.-VI. NEARLY READY.

A SCHOOL GEOMETRY.

By H. S. HALL, M.A., and F. H. STEVENS, M.A. Crown 8vo.

This work is based upon the recommendations of the Mathematical Association, and will be found to satisfy the requirements of University, Local, London Matriculation, Army, Navy, and other Examinations. In particular, the suggestions recently proposed by the Cambridge Syndicate have been carefully considered.

Parts I.-VI. (containing Plane and Solid Geometry, treated both Theoretically and Graphically). 4s. 6d.

Parts I. and II.—Part I., LINES and ANGLES, RECTILINEAL FIGURES. Part II., AREAS OF RECTILINEAL FIGURES (containing the Substance of Euclid, Book I.). 1s. 6d.

Part III.—CIRCLES (containing the Substance of Euclid, Book III., 1-34, and part of Book IV.). 1s.

Parts I., II., and III. 2s. 6d.

** This volume exactly suits the requirements of the New Syllabus for the King's Scholarship Examination.

Part IV.—SQUARES and RECTANGLES, GEOMETRICAL EQUIVALENTS OF CERTAIN ALGEBRAICAL FORMULÆ (containing the Substance of Euclid, Books II. and III., Props. 35-57). Sewed, 6d.

Parts I.-IV. 3s.

Parts III. and IV.—Containing the Substance of Euclid, Books II. and III. and part of Book IV. 1s. 6d.

Part V.—Containing the Substance of Euclid, Book VI., with additional Theorems and Examples. 1s. 6d.

Parts I.-V. 4s. 6d.

Parts IV. and V.—Containing the Substance of Euclid, Book II., Book III., 35-37, and Book VI. 2s.

Part VI.—Containing the Substance of Euclid, Book XI., 1-21, together with Theorems relating to the Surfaces and Volumes of the Simpler Solid Figures. 1s. 6d. Parts IV., V., and VI. 2s. 6d.

AN UNWRITTEN CHAPTER IN THE HISTORY OF EDUCATION. Being the History of the Society for the Education of the Poor of Ireland, generally known as the Kildare Place Society, 1811-1831. By H. KINGSMILL MOORE, D.D., Principal of the Church of Ireland Training College. Extra crown 8vo, 7s. 6d. net.

FLORILEGIUM TIRONIS GRAECUM. Simple Passages for Greek Unseen Translation, chosen with a view to their Literary Interest. By RONALD M. BURROWS, Professor of Greek in University College, Cardiff, and W. C. FLAMSTEAD WALTERS, Professor of Classical Literature in King's College, London. Crown 8vo, 4s. 6d.

ÉMILE ET HÉLÈNE. A French Primer. By Mrs. J. G. FRAZER. Grammatical Exercises by M. L. CHOUVILLE. Globe 8vo. [Shortly.]

PART I. NOW READY.

NEW FRENCH COURSE FOR SCHOOLS. Based on the Principle of the Direct Method, combining the Practical Use of the Living Language with a Systematic Study of Grammar. By CHARLES COPLAND PERRY, New College, Oxford, Dr. Phil. Marburg, Prussia, and Dr. ALBRECHT REUM, Oberlehrer am Vitzthumschen Gymnasium, Dresden. Part I., with an Introductory Chapter on French Pronunciation. Crown 8vo, 1s. 6d.

CAMBRIDGE UNIVERSITY PRESS.

NOW READY, PRICE 3s. 6d., A NEW TRIGONOMETRY BY PROFESSOR LONEY.

Intended for the use of Students commencing Trigonometry.

THE ELEMENTS OF TRIGONOMETRY. By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College (University of London), sometime Fellow of Sidney Sussex College, Cambridge. Extra foolscap 8vo, 3s. 6d.

BY THE SAME AUTHOR.

PLANE TRIGONOMETRY. Sixth Edition. Crown 8vo, 7s. 6d.; or in separate Parts. PART I. An Elementary Course, excluding the use of Imaginary Quantities, 5s. PART II., Analytical Trigonometry, 3s. 6d. Solutions of the Examples, 10s. 6d.

CAMBRIDGE ENGLISH CLASSICS. *New Volume.*

ROGER ASCHAM.—ENGLISH WORKS—TOXOPHILUS; Report of the Affairs and State of Germany; The Scholemaster. The Text edited by W. ALDIS WRIGHT, M.A., Vice-Master of Trinity College, Cambridge. Large crown 8vo, 4s. 6d. net.

CAMBRIDGE GREEK TESTAMENT FOR SCHOOLS AND COLLEGES. *New Volume.*

General Editor: F. H. CHASE, D.D., Norrisian Professor of Divinity.

THE EPISTLES TO THE THESSALONIANS. Edited by the Rev. GEORGE G. FINDLAY, D.D., Professor of New Testament Language and Literature at the Wesleyan College, Headingley. With Map, Introduction, and Notes. 3s.

Extract from Editor's Preface: "This is substantially a new work, designed for the Greek Testament student, as the previous volume from the same hand, in the Cambridge Bible for Schools and Colleges (1891), was written for the student of the English Bible."

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

New Volume. Subject for Oxford Local and College of Preceptors' Examinations, 1905.

VERGIL.—AENEID, BOOK III. Edited, with Introduction, Notes, and Complete Vocabulary, by A. SIDGWICK, M.A., Reader in Greek in the University of Oxford. 1s. 6d.

A SYSTEM OF SCHOOL CERTIFICATES.

VIEWS OF THE COLLEGE OF PRECEPTORS.

IN our August number last year (page 326) we mentioned that the Board of Education had issued a Report, presented to them by the Consultative Committee, containing proposals for a system of school certificates, and that they had circulated it to the English universities, to professional bodies, and to individuals interested, with a request for an expression of views upon it; and we outlined both the history of the inquiry and the proposals of the Consultative Committee. We now print the remarks that the Council of the College of Preceptors have addressed to the Board of Education in response to their invitation; and, as these remarks naturally follow the several clauses of the Proposals, we preface them with the text of the Proposals in full for the convenience of our readers.

PROPOSALS OF THE CONSULTATIVE COMMITTEE.

The Consultative Committee are of opinion:—

(1) That, with the object of diminishing the multiplicity of examinations affecting secondary schools, and of providing a test of adequate general education which may be widely accepted, a general system of school certificates is desirable.

The well-known term "Leaving Certificate" has been purposely avoided because it is to some extent misleading and is not unfrequently misunderstood.

(2) That it is not desirable that examinations for such certificates should be conducted by means of papers set for the whole country from a single central organization.

This clause must be read together with clause (6). It will be found that it is not the intention of these proposals to ignore the influence of the State in the supervision of a general system of examinations. On the other hand, it is important to prevent the evils which would almost certainly arise from the State having the sole responsibility in the matter. The desirability of bringing the examining body into closer relation with the teacher being recognised, it is obvious that, in dealing with a population of more than 30,000,000 and a large number and great variety of schools, this object can only be effectively attained by the establishment of more than one examining body. The success of the Scottish and Welsh systems seems to be largely due to the limited number of schools with which they have to deal.

(3) That such examinations should be controlled by a recognized examining body, which should be either (1) a University, or (2) a combination of Universities, or (3) an Examination Board representative of a University or Universities and of the Local Authorities which are prepared to co-operate with them. It is desirable that, whatever the examining body may be, teachers of schools should, where possible, be represented, and with regard to (3), that every such Board should contain a large academic element.

The proposal to form in some cases Boards representing local authorities and teachers in the schools as well as Universities may afford an opportunity for making an important new departure. Those local authorities especially which aid the schools and may perhaps pay the examination fees may be glad to be associated with a neighbouring University. There is further a growing body of public opinion in favour of associating the teachers in the schools with duties of this kind.

No general rule can be laid down requiring a school to be examined by a particular examining body. It may often be desirable that a school should be examined by the University or Board of the district in which it is situated. On the other hand a school may prefer to preserve or to create a connexion with one of the Universities of Oxford, Cambridge or London. It is recognized that it would not be desirable, if it were possible, to disregard the non-local character of these Universities, or the position which their examinations occupy all over the country. The proposals are based on the assumption that it will ultimately be best for the secondary schools which are maintained or largely aided by local authorities to look to provincial examining bodies for the organization of their examinations, and it is not improbable that local authorities may prefer their doing so; but in any case there will be a period of transition during which the new system and the existing University examinations will run side by side for all classes of schools, and the higher secondary schools will doubtless always retain complete liberty in the choice of their examining body.

(4) That recognition of these examining bodies should mean recognition by the Board of Education, acting on the advice of the Consultative Committee.

(5) That the following conditions should be required from schools which present candidates for school certificates:—

(a) Periodical Inspection. Whether this inspection be conducted by officers of the Board of Education, or by a University or other organization recognized under Section 3 of the Board of Education Act, 1899, the report of the inspection should be communicated to the examining body.

(b) The communication of the course of studies pursued in the school to the examining body.

That an examining body should be at liberty to decline to examine a school if the result of the inspection has not been, in their opinion, satisfactory; or if the course of studies is such as they are not able to approve.

It is considered that in this connexion inspection and examination should be treated as complementary one to the other. Inspection is required, in the first place, to enable the examining body to judge whether a school is fitted to be admitted to the benefits of the system; but it is also required to enable the examiners to understand the aims and characters of the different schools, and so, on the one hand, to prevent the examination from becoming mechanical and rigid, and, on the other, to check any tendency in the school to direct its efforts too exclusively to success in the examination.

(6) That a Central Board should be established for England (excluding, for the present, Wales and Monmouth), consisting of representatives from the Board of Education and from the different examining bodies, whose duty should be to co-ordinate and control the standards of these examinations, to secure the interchangeability of certificates, and to consider and as far as possible to adjust the relations of the examining bodies and their spheres of external action.

Although absolute identity of standard between examinations conducted by different bodies and in different places may be an impossible ideal, practical equivalence can probably be secured. Further, more than one combination of subjects may be held to represent a good general education. It will be the duty of the Central Board to see that a sufficient minimum standard is maintained in each subject, so that certificates including these subjects, wherever given, may possess a generally recognized and interchangeable value, and further, that these certificates represent in each case a good general education.

(7) That the Board of Education should constitute this Central Board, as soon as, in their opinion, a sufficient number of recognised examining bodies have signified their willingness to be represented thereupon, and should take all steps that may be necessary to procure the acceptance of the certificates by the professional bodies.

(8) That, since an examination held with the co-operation of the school in which a scholar has been taught is more likely to lead to a just estimate of the knowledge which he possesses than one held entirely by an outside body, the examination should be conducted in each school by external and internal examiners, representing respectively the examining body and the school staff.

(9) That the course of the work pursued by a scholar during his school career should be recorded and reported on by his teachers, and that this school record and report should be available for reference in deciding his fitness or unfitness to obtain a certificate.

The suggestion here is that an examiner, in any case in which he desires to do so, should be able to judge of the character of a candidate's school career. The school records and reports need not be of uniform pattern. What is required is that such materials shall be accessible as will enable an examiner to judge whether the scholar's school career has been satisfactory or not. These materials will include, at the least, the curriculum of all the classes which a candidate has attended, a note of the time he spent in each, and periodical reports of his industry, regularity, and progress.

(10) That the head master or head mistress of the school should certify that the candidate has received instruction during the necessary period, and is, in his or her opinion, fit to enter for the examination.

(11) That the external examiner or examiners should have control of the examination, and should have a veto on the passing of any candidate.

(12) That the papers should be set by the external examiner after consultation with the internal examiner.

This consultation does not necessarily involve a series of personal interviews previous to the examination. Full information as to the courses of study pursued by the candidate would in the first instance be supplied to the examining body for the information of the external examiner. The books read, whether in English, classical, or foreign literature, and the courses of history or geography studied, the practical work done, &c., would thus be reported. The internal examiner, also, would suggest series of questions, or indicate points upon which, in his opinion, questions should be set; and in general the two examiners would correspond on the subject-matter of the examination paper. The paper should, however, be finally made up by the external examiner on his own responsibility.

(13) That the allocation of work in reading and marking papers should be determined by the examining body, provided that papers which are near the minimum pass mark should be considered by both examiners.

(14) That oral and practical examinations should be conducted by the external and internal examiners acting in concert, who

should, subject to section (11), jointly assess the mark for each candidate in this part of any examination.

(15) That in language examinations no special books should be prescribed, but that passages should be included from the books used in the school as well as unseen passages. That an oral examination should always be held in the case of modern languages.

(16) That there should be a senior certificate for pupils who have received not less than four years' instruction in a school or schools accepted for examination under section (5).

That there should be a junior certificate limited to pupils under sixteen years of age who have received not less than three years' instruction in a school or schools accepted for examination under section (5).

With reference to the number of years of instruction required, it will be desirable at first to give some latitude to the Central Board.

(17) That no certificates for honours or marks for special distinction should be given, but that it should be open to the examiners to recommend the award of scholarships within a school or group of schools, when called upon to do so.

(18) That scholars who are in a school which, in the opinion of the Board of Education, is unable to conform to these regulations might be allowed to enter for the examinations under special regulations approved by the Central Board.

REMARKS OF THE COUNCIL OF THE COLLEGE

ON THE PROPOSALS OF THE CONSULTATIVE COMMITTEE.

The Council have carefully considered the proposals of the Consultative Committee for a System of School Certificates, a copy of which has been sent to the Council, together with a copy of a letter from the Secretary of the Consultative Committee and a circular letter from the Secretary of the Board of Education inviting the expression of the views of the College on these proposals, and beg respectfully to submit the following remarks:—

I. The Council observe that the function of the examinations dealt with is twofold—(1) to test the efficiency of schools, and (2) to furnish individual pupils with certificates which shall be accepted by the Recognizing Bodies* and by the public.

Looked at as a means of appraising the teaching and organization of a school, the scheme outlined in the constructive Proposals, with some modifications suggested by practical considerations, seems to the Council worthy of trial as an experiment in school examinations. But until the existing general examinations† have been shown to be insufficient or unsatisfactory and incapable of adaptation to new conditions, there appears to be no reason why these examinations should be superseded by a new scheme.

With regard to the second function, the Council are of opinion that there are serious objections to the issue of certificates under the proposed system.

II. The Council offer the following remarks on the several clauses of the proposals:—

(1) This clause suggests the consideration of the following points:—(a) the position of the existing examinations, (b) the difficulty caused by multiplicity of examinations, and (c) the question whether the establishment of the proposed system is likely to effect a reduction in the number of examinations.

(a) The four most widely used agencies for testing proficiency in schools are the examinations held by the Oxford and Cambridge Joint Board, and the Local Examinations conducted by the Oxford Delegacy, by the Cambridge Syndicate, and by the College of Preceptors. Taken together, these may fairly be said to form a system which provides for the whole field of secondary education. Difficulties arise in certain cases: for example, when a boy in the middle of a school whose sixth form works for the Joint Board Higher Certificates desires, at the age of sixteen or seventeen, to qualify for entrance to the medical profession, or for a clerkship in a bank, or for the lower grades of the Civil Service. But there is little or no reason to think that the majority of teachers are so dissatisfied with the above mentioned examinations as to wish to change them for a totally different system.

It should be mentioned that the present system is not one that has been imposed on schools by authority, but that it is a natural growth arising out of the needs of teachers, of pupils and their

* Bodies which control access to professional study or to employment, and which recognize the passing of certain examinations as evidence of general education sufficient for their purposes—the Board of Education, the General Medical Council, the Law Society, the Pharmaceutical Society, Banking Companies, &c.

† The examination of schools conducted by the Oxford and Cambridge Joint Board, by the Oxford Delegacy, by the Cambridge Syndicate, and by the College of Preceptors.

parents, and of the public at large. What was originally aimed at in these external examinations was (1) for the head of the school an opportunity of placing on record the results of efficient teaching, (2) for the parents of the pupils an impartial test of their children's progress, and (3) for the pupils themselves a healthy stimulus to exertion. After a time the certificates of the several Examining Boards were accepted by the public and by professional bodies as affording trustworthy evidence of attainment, and so they came to be used as Leaving Certificates.

The Scheme of Local Examinations instituted by the College of Preceptors was, from the first, intended to apply not to individual pupils, but to whole classes in a school—to afford a test of general proficiency not only at the end of a pupil's school career, but at various stages of that career, beginning with a time when it was judged that his work could be fairly subjected to a written test, and closing with the completion of the ordinary school course. As might be expected in a scheme framed by an association of teachers, it possesses features which make it peculiarly serviceable to schools. Among these may be mentioned the practice of furnishing to principals of schools complete statements of the marks awarded to their pupils, the provision of written reports on the work of whole classes, and the permission to schools to offer for examination the books in Scripture history, English literature, Latin and Greek, the periods in English history, and the special areas in geography, included in their ordinary schemes of study. The various Certificate Examinations are freely used as school examinations; whole forms are sent in, and reports from the examiners are given. Thus the examinations serve not only to give Certificates to those who deserve them, but to arrange pupils in order of merit for purposes of promotion, and to give a useful estimate of the work of a school.

(b) In the letter of the Secretary of the Consultative Committee reference is made to the "grave inconvenience and waste of time caused by the multiplicity of examinations for entrance into professions." For schools which make a practice of preparing their pupils for one or other of the four great Certificate Examinations—and the majority of secondary schools do so—the multiplicity complained of can hardly be said to exist. The work of the school is arranged with reference to the examination chosen, which, in its turn, is modelled so as to suit the requirements of the various types of schools which submit their pupils to the test, and the Recognizing Bodies mostly accept Certificates granted on the results of these examinations. Whatever difficulty exists appears to arise mainly from the diversity of requirements of certain recognizing bodies, and the Council consider that the extent of this difficulty has been somewhat exaggerated, and can be met by arrangements suggested in Section 6.

(c) The subjects prescribed by the four Recognizing Bodies* which collectively deal with the largest number of candidates are English, Arithmetic, Algebra, Geometry, Latin, and either Greek or a Modern Foreign Language. These subjects form part of the curriculum of the majority of secondary schools; but, so long as they are insisted on, the Proposals now under consideration will not assist pupils in schools which do not teach all the above subjects to satisfy the requirements of the bodies concerned, and the existing examinations must still be made use of. Another fact which must be taken into account is that, while large numbers of pupils, who do not proceed to professional studies, qualify for admission while they are at school, a large proportion of those who actually enter the professions do not qualify till long after they have left school. It would be difficult to meet the case of such persons otherwise than by the existing examinations.

It will be seen from the above considerations that the proposed system does not fully provide for existing conditions, and that it is not likely to effect any great reduction in the number of examinations.

The Council venture here to offer the suggestion that a remedy for any evils which may arise from diversity of schemes of examination or of the requirements of the Recognizing Bodies is to be sought, not in the addition of new examinations to the list of those already in existence, but rather in the periodical conference of the Examining Boards with each other and with other bodies interested in the matter. For this purpose they would welcome the establishment of a Conference Board consisting of representatives of the Board of Education, of the Examining Boards, of the Recognizing Bodies, and of Associations of Teachers.

(2) Most school subjects lend themselves readily to papers emanating from central organizations. Such organizations are

able to command the services of competent examiners, and to secure efficient revision of the papers. At present, schools are able to choose among Examining Bodies, all working on a large scale, and the Council are of opinion that this is better than the supersession of the present system either by a single State Examination or by a separate organization for the examination of each school.

(3) The Council approve, generally, the proposed constitution of the Examining Bodies, but they would strongly urge that the position of the College of Preceptors as a Chartered Corporation concerned with Secondary Education, and the work* that it has carried on for more than fifty years, entitle that body to be included as an alternative constituent of the Examining Bodies named in this clause, and they trust that the College may be allowed to take part in any scheme of examination that may commend itself to the Board of Education.

[The Council of the College of Preceptors, which controls the examinations conducted by that body, has always consisted, with few exceptions, of teachers or ex-teachers of schools, both public and private, and in appointing Examiners the Council generally insist on experience in school teaching as a necessary qualification.]

(5) (a) The Council recognize very fully the advantages of inspection by a sufficient staff of competent Inspectors; but they fear that the requirement of periodical inspection (in addition to examination) would weigh heavily on private and proprietary schools, as it would presumably involve considerable expense to the schools if the burden were laid upon them. It appears that gratuitous inspection is likely, in the immediate future, to be limited to schools eligible for grants under the new Regulations for Secondary Schools, which expressly exclude private and proprietary schools.

As to the concluding paragraph of (5), it seems to the Council that individual pupils through exceptional industry or intelligence might attain to the standard prescribed by the Recognizing Bodies, even if the school as a whole fell short of the requirements of the Inspecting Body, and it does not seem desirable that such pupils should be debarred from submitting themselves to the examination test. According to the Proposals provision for such pupils is possible only under exceptional conditions (Section 18).

(6) This proposal appears to the Council to be an excellent one in intention; but, in view of the number and diversity of constitution of the Examining Boards, and of the arrangements contemplated in Clauses 8, 9, 12, 13, and 14, the Council do not see how it will be possible to secure a reasonable amount of uniformity of standard.

The Council would suggest that the Central Board should include representatives of associations of teachers and of the Recognizing Bodies.

(8), (12), (13), (14) While recognizing the importance of adapting examinations to the peculiarities of the schools examined, the Council would point out several difficulties connected with the Proposals.

(i.) It is doubtful how far, under the conditions of English education, a Certificate in the award of which the teacher has a share would command the confidence of the public.

(ii.) The composition and printing of special papers for each school would involve considerable expense, far beyond what private schools and many endowed schools could bear.

(iii.) It is comparatively easy to draw the line between success and failure when an examiner or a board of awarders have before them a large number of sets of answers to identical papers. The Proposals throw this responsibility on a single person with a very limited number of sets of answers before him; and with the collaboration of teachers whose advice, whether in favour of their pupils or against them, can scarcely be expected to be wholly impartial.

It may interest the Board of Education to know that more than fifty years ago the College of Preceptors carried on for a few years examinations of schools on a plan which in its essential features bore considerable resemblance to the scheme now brought forward by the Consultative Committee.† It is to be observed.

* The College of Preceptors has been the pioneer in the professional training and examination of teachers in secondary schools, in efforts to secure the registration of teachers, and in the examination of pupils in schools. During the past ten years the College has examined 5,598 teachers and 154,422 pupils. Of the latter 11,021 entered for the Senior Grade, 50,494 for the Junior, 65,237 for the Third Class, and 27,670 for the Lower Forms Examination.

† The following are extracts from the Report of the Examination Committee of the College of Preceptors, published in *The Educational Times* for November, 1850:—
"II. (2) That the Examinations be conducted chiefly by the Principal of the School or his own Assistant Master (unless he desire the contrary), the College

* The General Medical Council, the Royal College of Veterinary Surgeons, the Pharmaceutical Society, and the Institute of Chemistry.

however, that the Council of that day do not appear to have contemplated the use of the Certificates granted on the results of these examinations as passports to professional study or employment. The scheme was superseded by the existing plan of examination by identical papers. Some years later the Universities of Oxford and Cambridge decided to take part in the examination of pupils of schools, and it is perhaps not without significance that they chose not the original plan that had been tried and discarded by the College of Preceptors, but the later method of examination by identical papers.

(9), (10), (11) While the Council approve generally these proposals in connexion with the testing of the work of a school as a whole, they are of opinion that, if a satisfactory record of conduct and progress during the school career is to be allowed to compensate for deficiency under the examination test, the value of the Certificate will be obscured for the purposes of the Recognizing Bodies and of the public.* On the other hand, it does not seem reasonable that misconduct, in the school sense, should deprive a pupil of whatever merit attaches to proved intellectual attainment. In this connexion, they would point out that the case of entry on professional study differs somewhat from the procuring of employment.† In the latter case a prospective employer would, of course, insist on satisfactory evidence of good character and of other qualities which seemed to him desirable.

(10) would be likely to lead to much dissatisfaction on the part of teachers. A teacher who had certified to the fitness of a pupil to enter for the examination could hardly be expected to acquiesce in an unfavourable verdict.

(15) In the Examinations of the College of Preceptors no books have at any time been prescribed in modern foreign languages, and for many years provision has been made for oral examination in these languages. With regard to the proposed supersession of prescribed books, the Council would point out that it might possibly have an injurious effect on the systematic reading of classical works in schools.

(16) In this proposal the idea of a Leaving Certificate is evidently implied, and the limitation of age for the lower grade, which has been practically done away with at the University Local Examinations (except in the award of Honours), would, the Committee consider, prove impracticable, if a respectable standard is to be maintained.

The coexistence of two separate Certificates for pupils of different ages should involve the construction of two separate curricula in a given school, which would involve great practical difficulties.

(17) The Council think it desirable that special proficiency in the Examination as a whole, as well as in individual subjects, should receive recognition in accordance with the present practice of Examining Boards. Such recognition affords a valuable stimulus to exertion on the part of the pupils, and is also useful in assisting employers in the selection of applicants for employment. Without some such stimulus there is danger that the work of pupils of ability may fall to a mere "pass" level.

THE MARY DACHELOR TRAINING COLLEGE (Camberwell) for secondary teachers records a very successful year. Four students of the Junior (or academical) Division, who took their B.A. (Lond.) in October, two of them in the First Class, now enter the Senior (or pedagogical) Division, which is largely composed of university graduates, and which carried off last July three out of the eight First Classes in educational theory awarded by the Cambridge Training Syndicate for their Teaching Diploma.

Examiners adding such questions and exercises, and taking such steps as they consider requisite to ensure a *bona fide* examination, and to discountenance any attempt at *crum*."

"III. . . . In order that the particular views of Teachers may be respected, and that no interference may be made by the Examiners with reference to the system pursued, the manuals and text-books employed, or any other matters of detail, Principals shall fill up a Form, to be transmitted to them for that purpose by the Secretary, which Form, when returned, shall serve for the guidance of the Examiners in the performance of their important, delicate, and trustworthy office."

* Take, as a concrete instance, the case of a boy entering a counting-house. It is obvious that, while his ability to perform arithmetical calculations intelligently, quickly, and correctly will be of service to his employer, his previous performance at approved courses of arithmetic lessons will, in itself, be of no value whatever. It is the attainment, not the preparation, that is of practical concern to the employer.

† The plan recently adopted for admission to Osborne in preparation for the Navy really deals with candidates for employment in a branch of the Public Service.

METHOD OF FRENCH INSTRUCTION AFTER THE FIRST STAGES.

At the Members' Meeting of the College of Preceptors on December 14, Mr. FRANCIS STORR in the Chair, Mr. F. B. KIRKMAN, B.A., gave a lecture on "Method of French Instruction after the First Stages."

The lecturer began by making a distinction between instruction in and after the beginners' stage. In the beginners' stage an element was present which dominated the method of this stage. He referred to the teaching of correct pronunciation. Unless a phonetic transcript were used from the start, it was necessary in the interests of pronunciation to make the oral lesson the centre of instruction. After the first stage, pronunciation fell into the background, and the reading book or reader became the centre of instruction. It was only the reader as centre that the lecturer proposed to consider. His remarks applied to readers of any difficulty, to classes of any age, and, speaking generally, to any modern language taught. The word French appeared in the title because it was from this language that he proposed to take his illustrations, and because, as far as details of method were concerned, what applied to French did not necessarily apply to other languages.

In considering the use of a reading book one had to recognize the claims both of the language and of its subject-matter. Hence a double aim—(1) to teach skill in the use of the language, and (2) to ensure that some of the knowledge it conveyed should remain the possession of the pupil. The latter aim raised the whole question of the principle to be adopted in choosing a reading book, a question that had not yet received adequate attention. It did not properly come within the scope of a lecture on method, and could therefore only be accorded brief and somewhat dogmatic treatment.

Speaking for himself, the lecturer said he would require a French reader to fulfil one of two conditions: it must either possess high literary merit or have reference to France and the French. Referring to the first condition, he said that the creation in the mind of the pupil of a permanent interest in at least one great literature besides his own was by common consent recognized as one of the chief aims of modern language instruction. The aim was seldom realized, the interest even when created not always proving permanent enough to endure after the school period. Among other causes, this failure was due to the practice of prescribing books for public examinations. A set book ceased to be a classic and became a text of so many pages to be got through. The reading of it ceased to be a joy and became a commercial transaction—labour in exchange for so many marks. Not until they stirred the literary conscience of examining bodies (assuming they had one), would the foreign classic have a fair field in English schools.

Turning to the second condition, the lecturer said he did not suppose that the reading of French history, or information about the modern French, would of necessity break down insular prejudice and create international sympathy. It would help, and it would supply material for direct lessons on what ought to be our mental attitude towards foreign countries. But this instruction fell more properly under the head of civics. In the very limited time given to French, the first business of the teacher was to teach French, not civics.

The preceding statement of the principles of selection referred only to French as part of a general education. In technical schools, in so far as they were literally technical and not merely upper elementary schools under another name, the selection of subject-matter was determined by the special needs of the pupils, whether scientific, industrial, or commercial.

What should be required in the way of knowledge of subject-matter? Not less than a brief summary of what was of value in the subject-matter of the text. It should be given in French, not necessarily, of course, in one breath, but in answer to a series of questions. Experience had shown that this was realizable.

Passing from subject-matter to the language itself, the lecturer held that ability to read with ease must always remain the paramount aim. It was only a small proportion of their pupils that ever required to write French, or to speak more than the negligible amount needed for touring purposes. But the power to read was essential, whatever the purpose in view, be it literary, scientific, commercial, or industrial. When serious reformers insisted on the value of the oral method or conversation, they were thinking of it, not as an end itself, but as a means.

There was a third general aim to be taken into account in French instruction after the first stages. It might be called the

æsthetic—the cultivation of the power to appreciate a French literary masterpiece, not primarily for the sake of its subject-matter, but simply as a work of art. This should be a natural result of an advanced knowledge of the language, and need not be further considered.

When the question of method of realizing the above aims was reached, one principle in particular demanded prominence, not only on account of its importance, but also because of its almost total neglect in the past. This was the principle of unity. When applied to the curriculum as a whole, it was familiar as the principle of concentration or of correlation of studies; but, whatever the name, and whether applied to a curriculum, a particular study, or a particular lesson, it involved the central idea of an organic whole, freed from all that was non-essential. This, indeed, was the principle that, consciously or unconsciously, underlies the making of any work of art. And a curriculum, a course of lessons, and even a single lesson, were, if perfectly made, works of art fit to rank with, if not above, the greatest artistic masterpieces the world had produced.

The principle of unity was ignored by the old method as commonly taught. This was seen in the complete separation of the grammar and exercises from the reading book. From the start the reformers had insisted that the whole of the instruction should be based upon the reading book. The advantages of thus unifying the instruction were obvious. In the first place, it concentrated attention on a limited word matter, taught this from every point of view, whether of meaning, inflexion, or construction, and sought to fix it in the mind as a whole, closely interdependent in all its parts. Secondly, it ensured that what was important should be taught. The words and the grammatical points that occurred most often in the reader were the most important, because they occurred most often. In this respect the old method showed a fine impartiality. It taught *nous parlâmes* with as much emphasis as *je suis*.

Taking the reader, then, as the centre, they had next to consider the various steps in the method of using it. These fell conveniently under five heads:—(1) establishing the meaning of the portion of text required for the lesson; (2) questions in French on the text to be answered in French, the answers taken together supplying a brief summary of the contents of the prepared page or pages; (3) groups of words based on the summary; (4) grammar practice based mainly upon the summary; (5) written tests.

Each lesson thus became an organic whole, and the final summary, in the case of a continuous text, preserved the unity of the complete course of lessons. Supposing, then, a text in the hands of the class, the first step was to make clear the meaning of the selected portion. This could be done by pointing to objects or pictures, association with known words, translation into English, and, in many cases, by explanations in French. No attempt was made to avoid translation: it was regarded as *one* of the legitimate means of making clear the meaning of new words, and often no other means was possible. On the other hand, there was no attempt to translate merely for the sake of translating. It was French, and not English, they had to teach in the French hour.

The work of establishing the meaning was, in the opinion of the lecturer, best done in the class-room, when time permitted, and not at home. If left to prepare the text by himself, the pupil relied too exclusively on translation, and was also tempted to depend overmuch on editorial notes, dictionary, and weak parents. The old superstition that a boy should be left to "hammer it out" by himself meant in practice licence to the lazy boy to do the reverse. When the preparation of the text was done in the class-room, there was no escape for the lazy boy, as he could be taken in hand and compelled to grapple with difficulties.

When the meaning of the selected portion of the text was clear, the teacher proceeded to the second step, the questions on the text. The idea of some of the earlier reformers was to take a few lines and turn these few lines, so to speak, inside out and upside down by every variety of question and answer. A limited amount of this exercise was no doubt useful, but, if facility to read was the paramount aim, it was necessary to cover the ground much more rapidly. This was done by taking two, three, or more pages as the basis of each lesson, the preparation of the prescribed amount requiring perhaps more than one period of time. On these pages just enough questions were asked to provide the briefest possible summary of their contents. The questions were asked in French to be answered in French (1) from the text, (2) with the text shut. A column of words was

then written on the board, each word taken from and representing each of the answers. By the aid of these recall-words the pupils were gradually led to give the series of answers as one continuous answer, this answer constituting the summary. The summary need not, of course, be in the exact wording of the text, and in the case of an advanced class considerable variety might be introduced, provided always that the teacher was sure of the accuracy of his French.

The summary formed the basis of the remainder of the lesson, the third, fourth, and fifth steps. It was studied first with a view to enriching the pupils' vocabulary (third step). This was done by selecting the common words from the summary, and, with the addition of related words or idioms, forming them into groups. For instance, the word *guerre* might occur, and to this *guerrier* would be added. *Mari* might occur, to which would be added *femme, époux, épouse, épouser, se marier, marier*, and so on. The meaning of the new words would be made clear by association, object-lessons, or translation. The method of practice was, wherever possible, by question and answer in French, *e.g.*: "Comment s'appelle celui qui a épousé une femme? Celle qui a épousé un homme? Qu'est-ce qui marie un homme et une femme? Comment s'appelle l'acte de se marier?" &c. Or inversely: "Qu'est-ce qu'un époux? épouse?" &c. There seemed no limit to the varieties of this form of practice. It was done in French in order to bind the French expression direct to its meaning. Translation, legitimate as a way of making clear the meaning of words, was, of course, strictly excluded whenever possible, from the *practising* stage in this or any other step of the method.

So far the word-matter had been learnt in the form of a summary composed of more or less stereotyped sentences, generally in the third person (second step), and it had been enriched by the addition of new words (third step). In the fourth step, the summary and groups were re-studied from the point of view of inflexion and construction; feminine was given for masculine, or plural for singular, first person for third person, past tense for present tense, infinitive for subjunctive, one construction for another, and so on, or other examples of a construction or inflexion were supplied. It was a process of repetition with variety, the result being to make the pupil master of the word-matter in as many contexts as possible. Looked at in this way, it was evident that grammar could not be dispensed with: in fact, it was absolutely necessary to mastery of the language.

The method in all cases where no rule had to be formulated was nothing but practice by question and answer in French, the end being the instinctive unhesitating use of the right inflexion or construction, and not the ability to patter off examples and exceptions. Forms of practice for each part of speech were easily found. A good illustration was provided by a passage in the "Roi des Montagnes," chapter iii., which described Schultz setting out from his lodgings in Athens on the excursion which was to end so fatally: "Je descendis la rue d'Hermès jusqu'au carrefour de la Belle-Grèce, et je pris la rue d'Eole . . ." The pupil, as a result of the second step in the method, would be able to give an account of this in the third person of the past tense. In the grammar step the teacher might want to have the future tense practised in all its persons. He would begin by having the future inflexions of each verb practised in the ordinary way, *e.g.*, "Je descendrai, tu descendras, il descendra," &c. Then, writing the recall words on the board, he would begin: "Je suis Schultz, je descendrai la rue d'Hermès . . ., je prendrai . . ." &c. Then, to one of the pupils: "Vous êtes Schultz. Qu'est-ce que vous ferez?" And so on with the other persons. "Nous sommes avec Schultz," &c. The same words could, for the sake of further experience, be practised in different contexts, *e.g.*: "Je descendrai la rue; je tournerai à droite; je longerai le Musée Britannique . . ." &c., an imaginary street plan being drawn on the board. Numberless examples of the same kind could be given, for almost any passage of a text would supply ample verb-drill of the most thorough description. Such, at least, was the lecturer's experience. If pupils taught on so-called reform methods proved weak in verbs, it was emphatically not the fault of the oral method.

Turning to syntax, the lecturer pointed out that, whereas the old method began with the rule, the new began with the example. The method he adopted, in common with many others, was as follows. A few simple examples, in part taken from the summary that formed the basis of the lesson, in part made up of words known to the class, were written on the board to illustrate the rule it was required to teach. Over these sentences a question was written. The answer to this question, *i.e.*, the rule, the

class was expected to find out and formulate after careful comparison of the examples. Sometimes aid was needed, sometimes not. The teacher was generally able to tell which pupils had discovered the answer by the change in the expression of their faces. Only when a fair number appeared to have reached a conclusion was the rule asked for, and it was then, with the aid of their comrades, wormed out of the pupils who were still in the dark. Speaking for himself, the lecturer said he never permitted the rule to be written down. He held that it was only of use if in the head of the pupil: if not there, it mattered little where it was. The best way of getting it back into the pupil's head was to repeat the process of induction. But there was no necessity to do this when once the pupil was able to use the correct construction covered by the rule instinctively and without hesitation. When the pupil was able to do this, the rule of course had served its legitimate purpose and might safely be forgotten. Indeed no one could be said to possess a language till he could throw away the grammar, as the halt become whole threw away his crutch. Unfortunately, the rule had also to serve an illegitimate purpose by order of examining bodies, which continued to permit papers to be set in which rules were asked for. Such questions imposed a vicious method on the teacher, amounting often to mere cram, and they could not be condemned too severely.

The formulation of the rule was followed by the inevitable practice conducted wherever possible by means of question and answer in French. Speaking of his own experience, the lecturer said he had always found that the grammar lesson was the one most appreciated by his classes. They were interested because they were finding something out for themselves, they were Cooks—not the modern, but the elder of that name—making discoveries in unexplored linguistic fields. The mental process involved provided, moreover, an excellent training in scientific method. Boys, like men, were often ready to generalize from insufficient particulars. When the teacher quietly put his finger on an example which upset the too hasty generalization, the boy began to understand what was meant by scientific inquiry. It was extraordinary that teachers had ever given up a method which was known and practised in the days of Ascham, merely to commit the enormity of exacting parrot repetition of printed rules. The lesson ended with written tests, of which a large variety, including translation and free composition, were recognized by reform teachers.

The lecturer concluded by remarks on a few detached points. (1) Each lesson, he said, should as far as possible be conducted in French. The necessary directions were taught when required for use, and were learnt without any difficulty. (2) Owing to the unfavourable conditions of modern language instruction in many schools, he recognized that the above method might in particular cases require modification. One had often to be content to teach by mutilated methods. (3) He claimed no originality for most of the details of the method described. They were, or ought to be, familiar to all reform teachers. If he claimed any originality at all, it was for the particular "blend" of methods he had adopted. (4) He was far from believing that the last word had been said on the methods of instruction. The more they studied the subject, the greater the number of unsolved questions that confronted them. What was required was careful accumulation of the results of observations and experiments conducted on strictly scientific lines. Hence absolute liberty to experiment along different lines of inquiry to a common end was necessary, it being, of course, understood that liberty did not mean licence to teach badly. Above all it was necessary to cherish an open mind. (5) There was not one reform method, but many—some worse than the worst of the old. If any one of his hearers chose to declare that his was not among the worst, he would not contradict him. But he recognized that his method was far from perfect, and he would be grateful of their help in making it better.

The CHAIRMAN wished to emphasize the statement of the lecturer that the method he had propounded to them was by no means to be regarded as the only possible one. This method was distinctively intended for the second stage in French, but he would like to be informed as to the period of school life to which it was intended to apply—whether from the second year to the end, or to some other period. Again, he could not conceive of such a lesson based upon a work of art such as a play of Victor Hugo or "Les Lettres Provinciales"; but he was glad to hear denounced the heresy which found favour even with some examiners, that conversation was the very *acme* of French teaching. Very few hours of an Englishman's Continental holiday were spent in speaking French or German, whereas the hours spent in reading in those languages at home were very many. The aim of modern

language teachers was to inspire a love of literature, and induce such a familiarity with the language that it could be read with ease and appreciation. He thought, however, that the lecturer's experience of the girls' school whose pupils discussed critically in French a fable of La Fontaine must be an exceptional one. As to vocabulary, there was a difficulty in choosing books. Very often excellent books, like "Life on a Barge," or a military story, abounded in technical words, and words that could not be considered common. Mr. Nasmyth had found it necessary to take elaborate means to tabulate French words according to the frequency of their occurrence, in order that the really common words should be learned first. He quite agreed that Herr Walther's method of dealing exhaustively with every word was apt to be tedious, but he thought that under the lecturer's method the full benefit of the reading was not secured, there being a tendency to pass over the idioms, or all but the simpler ones. He contended that a blend of the two principles should be aimed at. All would concede that grammar should be based upon the reading. Yet he thought there were certain paradigms which must be acquired by a method more nearly approaching the old, and he ventured to differ somewhat as to the mode of studying syntax also. He knew no more excellent practice in simple logic than for a pupil to see how, of a number of examples, one will illustrate the rule, and another will be a real, or a seeming, exception to it. Further, he would like to know whether the lecturer approved of the questions and written tests being done in advance for the teacher, or of each teacher doing it for himself. The most popular type of French book was one in which there were short sentences at the end of every chapter. His own preference was for the plain text, and he thought two books should be proceeded with simultaneously, the one a short book, which should be read very thoroughly, and so as to compel pupils to know their work *au fond*, and the other a longer work, to be read rapidly, with the intention of enabling the pupils to gain a fair knowledge of the general drift of it. There were certain easy books which it was advantageous to go through in that way, because they gave pupils a feeling of confidence, from the knowledge of their ability to read a French book for enjoyment. It might be hoped that a satisfactory percentage of modern language pupils so taught would continue after they left school to read French or German of their own accord. His own experience went to show that there would be no such danger as had been apprehended by some in the recent controversy, that education would be brought to a lower level through the substitution of modern for classical languages. He considered that unseen French or German without a dictionary was quite as severe a test as unseen Greek with a dictionary, and far harder than the present set book in Greek.

Mr. SAVILLE remarked that nothing had been said about composition or translation into French, as required of pupils in upper forms. What kind of translation did the lecturer favour? Was it to be absolutely new translation, or translation based on the text? In the second place, was the reader to consist of a story so constructed as to illustrate the grammar of the language, and, if so, were they to rely for the study of grammar on taking instances as they arose, or were certain points only to be taken up according to a prearranged scheme? Thirdly, he desired to ask, what was to be the nature of the reading of which so much had been said? Was the lecturer of opinion that a French classic might be read in class in the upper forms, or not? He did not regard word-for-word translation as reading at all, and a boy instructed in this way would never read French on his own account. Reading, as he understood it, meant that the French word should at once suggest the idea it represented without the intermediary of English; and a boy in the fifth or sixth form should be capable of this with but little assistance. Fourthly, would the lecturer recommend use of intelligent "snippets," such as descriptions of beautiful scenery or vivid pictures of events, as a means of securing a wider vocabulary than could be obtained from a single book? And, finally, might he ask the lecturer to make it clear how he would begin an ordinary lesson? Would he put on first one boy to read six lines or a paragraph and then another, and so on?

Mlle. PAQUIER said that a dull class should first translate with every necessary aid it was possible to give them, whether in French or in English, while a good class would not need to translate first. It was also her experience that, with young teachers especially, it was far better that questions should be supplied at the end of the text-book than that they should go on asking questions at random, and she stated that her own students in training had been very grateful for this kind of assistance. If the oral lessons in the early stages had been conducted intelligently, conversation would come naturally in the later stages; though she, of course, agreed that conversation was not the one and only end in view.

The LECTURER, in answer to the various questions, said that the method was intended to be followed from the conclusion of the beginners' stage right to the end of the pupils' school course, but not to the exclusion of other work in French. It was a method for teaching the language as language; but the scholars might at the same time be reading French classics, which should occupy more and more time as they progressed. With regard to the difficulty of acquiring a sufficient vocabulary, he said that many of the available text-books, supplemented by groups of words, did provide a very full and varied vocabulary,

though he saw no objection to a book of well chosen selections in good French. It was, however, necessary to have, in addition to such selections, some book which should be read through rapidly, without delaying to make sure that every word could be translated. If pupils did not grasp the drift of a passage, it was always possible for them to say when they did not understand, though the teacher would generally be aware of failure from the manner in which the passage was read. Any explanation should be asked for and given in French as far as possible. As to translation into French, he said that both the unseen form and that which was based on the text were necessary, the first as a general or public test, the second as a test of the work done in connexion with the reader. Then, as to verb paradigms, he saw not the least objection to their use, provided they were not regarded as the be-all and end-all of grammar. They were excellent as preliminary practice of inflexions, but it was essential that pupils should afterwards practise the tenses in sentence form by means of question and answer in French. And, as to syntax, he had intended it to be understood that the boys should be required to frame their rules in good and definite language, and there was nothing in his method to preclude them from seeing whether examples did or did not illustrate the rule, or from collecting all the idioms they could find. Passing to the question whether the written tests should be the work of the teacher or supplied to him in the text-book, it was undoubtedly better that the teacher should frame them, since he alone was competent to judge what was a true test of the progress of a particular class; but it was unfortunate that lack of time precluded modern language teachers in England from following this ideal. It had been asked whether the reader would be found to contain sufficient material for the study of grammar. It had been his experience that nearly every reader did supply almost enough, but as long as grammar was a necessity in examinations the amount supplied by the reader must be supplemented from other sources, and no teacher should ever feel that he was limited to his reader. Another question had referred to the way of beginning an ordinary lesson. There were many ways. The choice depended entirely on the intelligence and progress of the class. With a backward class the ordinary plan was for the teacher to read aloud first, making the class pronounce each sentence after him, then proceeding to establish the meaning. With advanced classes pupils would simply read aloud in turn straight ahead, pausing only to make sure of the meaning of some new word. This should be the usual course.

A vote of thanks to the lecturer concluded the proceedings.

THE SCHOOL IN SOME OF ITS RELATIONS TO SOCIAL ORGANIZATION AND TO NATIONAL LIFE.

Abstract of a paper read by Prof. M. E. Sadler at a meeting of the Sociological Society on Tuesday, December 13, at 8 p.m., at the School of Economics and Political Science (University of London), Clare Market, W.C., Sir A. W. Rücker, D.C.L., F.R.S. (Principal of the University of London), in the Chair.

1. Has not one great obstacle to the advance of educational science lain in our too habitually thinking of schools as if school work were an end in itself, and in our discussing school problems too little in relation to their social context and with too vague regard to the actual needs of the callings for which the different types of school ought definitely to prepare their pupils?

2. All true education has a double purpose, namely, (1) the development of the moral personality, of the physical powers, and of the intellectual aptitudes of the individual; and (2) the fitting of the pupil skilfully to perform the duties of some definite calling, or type of calling, in life, and worthily to discharge with courage and composure of mind the tasks likely to devolve upon him or her as a member (a) of a family, (b) of a local community, whose claims are based upon physical neighbourhood, (c) of the nation, (d) of some church or other ethical fellowship, based upon affinity of spiritual need but not necessarily conterminous with any one country.

3. The trend of the individualistic doctrine in psychology, in economics, and in ethics was to exaggerate the relative importance of that part of educational effort which aims especially at developing individual capacity, and at "giving every one his chance" by means of "the educational ladder," or by incitements to self-help. The trend of the rationalistic movement in philosophy and ethics was yet further to exaggerate one element in this individualistic type of education, viz., the purely intellectual element, or the side of mere instruction. Against each of these exaggerations, influential sections of English opinion have always maintained a sturdy protest and never an unavailing one. Against exaggerated individualism in educational aims, Anglicanism protested (rather confusedly but stubbornly) on the one hand, and Robert Owen and the Socialists (with too little feeling for historical and spiritual continuity) protested on the other. Against exaggerated intellectualism in educational aims, S. T.

Coleridge, Wordsworth, Tractarian Oxford, and the leaders of English higher secondary education protested on the one hand, and the great mass of shrewd English opinion, with its tough prejudice against mere book-learning, on the other. The result of this conflict of educational ideals, which persisted for more than a century, was not quite a deadlock in English educational development, but painfully obstructed advance, each stage of which was marked by more or less untidy and illogical compromise.

4. The key to the history of English educational struggles, from the middle of the seventeenth century almost down to the present time, lies in this conflict between two disparate ideals. The one ideal was rather narrowly limited to a fervent belief in the intellectual and, as its upholders thought, the resultant moral efficacy of secular instruction of a more or less literary character, given in publicly organized day schools. The other ideal maintained that "national education," in any worthy sense of the word, consists in the joint and often secret operation of many kinds of influence, permeating the heart as well as the mind of the nation, and proceeding from historic institutions, spiritual traditions, ancient and familiar habits of life, intimacy with nature, social relationships, personal loyalties, economic activities, daring adventure, and free discussion. Those who incline to the first of these two views have, more frequently than the best of their opponents, been unconsciously one-sided in their conception of what the whole nation ought to be made to think and how it ought to be made to behave. Those who have inclined to the second view have often been lacking in the pertinacity of argument which comes from rather narrow convictions, have been apt to ignore the darker sides of the existing social order, have underrated the value of good school teaching, and have often been unable to express in words, either to themselves or to other people, what they really felt.

5. The school of thought which attached undue value to mere verbal instruction given to large classes in elementary day schools is now virtually bankrupt. On the other hand, the opposite school of thought finds that the formulated doctrines upon which it implicitly relied have lost their earlier look of certainty, and that the old social order has nearly dissolved away under the influences of the Industrial Revolution. Hence there has been a deliquescence of prejudice and of conviction on both sides.

6. The result is, for the time being, a readiness for joint action in educational affairs which has no precedent in English history. This melting away of old educational prejudices has happened to coincide with three other important changes. The biologists have taught us to assign immense importance to the influences of environment upon the human organism. The effects of slum life in the "drift quarters" of great cities have shown themselves in perilous tendencies to physical and mental deterioration. And English political instinct, always sensitive to new dangers and opportunities, is driving us towards more stringent forms of collective organization in industry, in commerce, and in social regulation. Hence a movement in English educational thought (not without its counterpart even in individualistic America) towards modifications in our educational methods with a view to social unification and increased collective efficiency. For example, there is spreading a conviction that the time has come for dealing with the residual deposit which consists of the physically and mentally deteriorate, especially in the great centres of the population. What is wanted is a resolve to attack the slum problem under scientific guidance, on a well considered plan, with the help of great resources, and with the thoroughness, the energy, and the persistence which are displayed in great works of modern engineering. In such a plan the labours of school teachers and the educational influence of a new type of elementary school would play an important part.

But social "rescue work" is only part of the problem which has to be faced in the organization of English elementary education. Only a small proportion of the elementary schools have to deal with the slum problem. The great increase of economic well-being among the artisan population has brought with it a need for a superior kind of elementary school with smaller classes, highly trained teachers, well equipped buildings, and spacious playgrounds, supplemented by higher courses of continuative instruction. Thus, in respect of elementary as well as of secondary schools, there is every sign that our progress will be in the direction of greater differentiation of type.

7. We are beginning to lay more stress upon the social and corporate influences of education; upon the unconscious education which comes through the pressure of environment; upon the need for better food, better home surroundings, and more

healthy life conditions for the rising generation; and upon the value of those kinds of training which fit a child for the actual duties of life. As the power of individual initiative in danger or difficulty is one of the chief assets of empire, it is essential that, while encouraging the corporate influences of school life, we should develop through our education individuality of character combined with self-control.

In English education, however, we are apt to ignore the value of the imagination and to neglect the educational instruments which can stimulate and train it. We are prone to think that anybody is good enough for the work of school teaching. We miss our opportunities of making the best of the critical early years of a child's education. What is wanted is a combination of the zeal and venturesomeness of American educational effort and of German carefulness in methods of teaching with the English insight into the necessity of manual and corporate training as elements in education, and English preference for those kinds of education which, though not ecclesiastical or theologically dogmatic, make children sensitive to the sacred claims and deeper needs that lie behind the mask of merely mundane things, and are never long without a witness in the common experience of life.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on December 17. Present: Mr. E. A. Butler, Vice-President, in the Chair; Prof. Adams, Mr. Barlet, Mr. Baumann, Rev. Canon Bell, Mr. J. L. Butler, Mr. Charles, Miss Crookshank, Mr. Eve, Rev. Dr. Hiron, Mr. Kelland, Rev. R. Lee, Rev. G. E. Mackie, Mr. Morgan, Mr. Pinches, Miss Punnett, Mr. Rule, and Mr. Starbuck.

The minutes of the last meeting were read and confirmed.

The Secretary reported that for the Certificate and Lower Forms Examinations the number of entries was about 8,550, and the number of entries for the Christmas Examination for Diplomas was 569. These figures were about the same as for the corresponding examinations in 1903.

Mr. W. E. Johnson, M.A., was appointed to deliver the Psychology Course of Lectures to Teachers in 1905.

Saturday, January 28, was fixed as the date of the next Ordinary General Meeting of the members of the College.

The report of the representatives of the College on the Joint Federation Committee was submitted. The report included the preliminary draft of an amending Charter, which, it was recommended, might form the basis of a supplementary Charter, for which application to the Privy Council should be made, if approved by the members of the College at a Special General Meeting to be convened for the purpose. It was resolved: "That the Council gives its general approval to the Draft Charter, but desires to defer the minute consideration of it till the opinion of counsel has been obtained."

The draft Report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean for final revision.

The following persons were elected members of the College:—

Miss H. Benson, L.C.P., 40 Clapham Common, S.W.

Mr. V. L. Cottell, A.C.P., 7 Churchill Road, Willesden Green, N.W.

Miss E. Dodwell, L.C.P., Old Grammar School for Girls, Thame.

Mr. E. F. Lee, Kwala Lumpur, Federated Malay States.

Mr. W. T. B. Ridge, L.C.P., Ashwood Terrace, Longton, Staffs.

Mr. R. Robson, B.Sc. Durham, L.C.P., Maglona House, Aberayron.

Mr. C. B. Rusbridge, L.C.P., Caerleon, Elmhurst Street, Clapham.

Mr. R. B. B. Tustin, A.C.P., 6 Milwain Road, Stretford, Manchester.

Mr. P. Wertheim, A.C.P., Station Road, Hampton-on-Thames.

The meeting was adjourned to January 23.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—Farrar's Place-Name Correspondences.

By G. BELL & SONS.—Bell's Concise Latin Course.

By the CAMBRIDGE UNIVERSITY PRESS.—Findlay's Epistles of Paul to the Thessalonians (Cambridge Greek Testament).

By HACHETTE & CO.—Kastner's Augier and Sandeau's La Pierre de Touche.

By RIVINGTONS.—Hillard's Acts of the Apostles.

SPECIAL MEETING OF THE COUNCIL.

A Special Meeting of the Council was held on December 3. Present: Sir Philip Magnus, Vice-President, in the Chair; Rev. J. B. Blomfield, Mr. E. A. Butler, Mr. Charles, Miss Crookshank, Mr. Easterbrook, Mr. Eve, Mr. Hawe, Mr. Kelland, Rev. G. E. Mackie, Mr. Millar Inglis, Dr. Maclure, Mr. Morgan, Mr. Pinches, Mr. Rule, Mr. Rushbrooke, Mr. Starbuck, Mr. Vincent, and Dr. Wormell.

The report of the Special Committee on the proposals of the Consultative Committee for a system of School Certificates was considered paragraph by paragraph, and was finally adopted with slight modifications. It was resolved that the views of the Council as embodied in the report should be communicated to the Board of Education.

REVIEWS.

FAMOUS HEAD MASTERS AND FAMOUS BOYS.

(1) *Six Great Schoolmasters*. By F. D. How. (7s. 6d. Methuen.)

(2) *Blundell's Worthies, 1604-1904*. By M. L. Banks, M.A.

(7s. 6d. net. Exeter: James G. Commin. Chatto & Windus.)

(1) Mr. How's six great schoolmasters are Hawtrey, Moberly, Kennedy, Vaughan, Temple, and Bradley. The selection was guided chiefly by two considerations: "first, that they should have occupied their head masterships during some part at least of the thirty years between 1835 and 1865; secondly, that they should not have already formed the subjects of any considerable biography." The second point is somewhat overridden in the single case of Hawtrey—a matter of no moment. The subjects are all eminently worthy of commemoration, and they find in Mr. How a sympathetic and industrious biographer. There are thirteen illustrations, including portraits of the great head masters.

The period chosen is of deep interest: if it does not by any means "mark the progress of the public schools from their worst state to the high-water mark of their efficiency," at any rate it witnessed an advance to a vastly improved position. The influence of Arnold cannot be doubted, whether by direct personal operation, as in the cases of Vaughan and Bradley, or by more or less indirect inspiration of Temple and Kennedy and Moberly, or even Hawtrey—not to go beyond our record. But still more widely and insistently powerful was the influence of public opinion, compelling an expansion of interests and a variation of methods, without any encouragement to sacrifice the honest thoroughness that was perhaps the best feature of the old régime. Mr. How, indeed, seems to regret that the starch has got diluted in the personal bearing of masters. But is it, really, "a sorry sight to see a master, in a flannel coat, capless, and gownless, trundling on his bicycle, just—and only just—in time to take his form?" Is there the smallest solid reason for suggesting that such a master does not "retain a semblance of self-respect"? The world has moved a little: that is all. And, again, how can it be argued that the appointment of a lay head implies "regardlessness of the religious welfare of the boys"? And, once more, is it not a gain to provide an intellectual interest of one kind or another, even modern and practically useful, for all boys without classical bent, while keeping up the classical boys to the old standard, and that too on a materially widened basis?

Mr. How has laboured hard to draw his portraits faithfully, and he has rightly availed himself of the best assistance. For all that, old pupils and friends will inevitably miss characteristic traits, as somebody would do whoever were the biographer. The personal reminiscences and anecdotes, the general setting of each portrait, will recall pleasant memories to many, and interest many outsiders, especially in the profession. It may be, indeed, that teachers (and others) trained in a different school will be amazed to find the common attributes of a good schoolmaster extolled as if they were rather special qualities of a particular one, or a particular six, and marvel at the narrowness of outlook that now seems to have been possible in men of exceptional academic distinction and personal accomplishment. If the personages are overrated here and there, the discreet reader can make his own deductions: it will probably be difficult to accept Dr. Moberly as a "great," or even as a moderately exemplary, head master; and one can only smile at Dr. Kennedy's stupendous intellect, while acknowledging that he was a distinguished classic within limits. Minor matters we pass over: but that *δέξασθαι* is unfortunately jarring, and the indignation story of "the audacious Brunck" and his intrusive comma is surely close to the ludicrous.

(2) There is nothing marvellous in the fact that Peter Blundell's School at Tiverton "attracted cadets of the best families in the West"—that is just what a good school ought to do, and does. Mr. Banks, a late assistant master, has entered into the spirit of the place, and, with the assistance of several writers of special knowledge, has produced a very interesting memorial volume containing twenty-five biographical sketches, with ten illustrations. Most of Mr. Banks's heroes appear to be of comparatively local fame only, but a fair proportion are of general reputation—notably Sir John Popham, Bampfylde Moore Carew, Hayward, and Blackmore. But why is there no attempt to furnish an account of Peter Blundell himself? His story is as exemplary as any that is told in the volume. The merits of the biographies vary with the writers, and they vary considerably; but the work will be deeply interesting to all Blundellians and their friends. It is handsomely printed and got up.

FINITE CONTINUOUS TRANSFORMATION GROUPS.

Introductory Treatise on Lie's Theory of Finite Continuous Transformation Groups. By John Edward Campbell, M.A. (14s. net. Clarendon Press.)

Several important treatises have recently been added to the library of English mathematical literature by writers who have undertaken the task of adapting to the needs of the English reader notable theses based on the special researches of foreign mathematicians. Mr. J. E. Campbell's treatise on the theory of Finite Continuous Transformation Groups is one of the works belonging to this category. In it we have the main outlines of the theory of such groups as developed by the great Norwegian mathematician Lie, to whose investigations the student is indebted for the growth of the subject. But, whilst the theory discussed in Mr. Campbell's treatise is not original, the author hopes and believes that the form in which it is presented to the reader will prove to be, at least in part, new. In confining his work to a single volume of medium dimensions, Mr. Campbell has found it necessary to abstain from giving an absolutely exhaustive treatment of the subject. For example, the theory of the possible types of group-structure is passed over; but this abridgment is fully justified in a work written for the purpose of setting forth Lie's theory, seeing that the portion left out has received much development at the hands of other mathematicians. Mr. Campbell commences by introducing the reader to the broad outlines of the theory of groups: he carefully explains the essential character of a transformation group, clearly distinguishes between the leading classes of such groups—*continuous, finite and continuous, discontinuous, mixed*—and defines also sub-groups and groups of various special types. In his notation for a series of transformation operations the author reverses the order used by Prof. Burnside, the reason being that the predominance in the present work of differential operators renders the order used by the latter writer unsuitable. The important part played here by differential in contradistinction to other operators is readily accounted for by those who consider that the ultimate object of Lie's work in this direction was to contribute materially to the development of the theory of differential equations.

After the introductory consideration of general ideas, Mr. Campbell proceeds to explain and illustrate the principle of "extended point transformation." Subsequent chapters discuss in turn the fundamental propositions of the subject, their application to certain systems of differential equations, the properties of invariants in so far as they affect transformation groups, and the main principles of classification. Space is also devoted to the study of Pfaff's equation, to the consideration of systems of homogeneous functions, and to other equally important points. A method is given for obtaining all possible types of groups in the particular cases in which not more than three variables are involved. It should be noted that the book is free from intricacies of language and style, and a great service has been rendered by the author in producing a work in which a student of advanced mathematics is relieved from the additional difficulties often attendant either on reading a new subject in a foreign tongue or on translating abstruse English into simpler language.

NIBELUNGENLIED AND GUDRUN.

The Nibelungenlied and Gudrun in England and America. By Francis E. Sandbach, B.A., Ph.D., Lecturer in German at the University of Birmingham. (10s. 6d. Nutt.)

In this volume Dr. Sandbach places on record "exactly what attention has been paid in England and America to the two great National Epics of Germany." His plan is to deal with the materials in four sections in each case: first, translations; next, reprints of the old German text; then, miscellaneous accounts and essays; and, finally, influence on literature proper—all in chronological order. An obvious difficulty is to prevent repetition, and Dr. Sandbach meets it by prefixing introductory sections containing fairly detailed abstracts of the two poems, brief accounts of the most important facts and theories connected with them (including the results of recent research), and select bibliographies. The expedient is as effective as could reasonably be expected, and, if many repetitions still remain, they must be regarded as practically inevitable, and they may serve the useful purpose of impressing blunders that seem to run through more or fewer of the works that are passed in review.

The essay was originally written for a Certificate of Research at Cambridge. In that point of view it is certainly a meritorious effort, with fewer marks of restricted outlook than might have been anticipated; and its criticisms will furnish much help and

guidance to students within the field of survey. The review of translations, &c., is quite sufficient once for all: it shows impressively how little good grain there is in the considerable heaps of chaff. For our own part we should sift again, for we cannot but think that Dr. Sandbach has treated several of the better productions—such as Lettson's translation—a good deal too leniently. Most of the writers have been imperfectly acquainted with the language, some of them very imperfectly; and it is plain that on such terms no scholarly work can be accomplished. There is no lack of texts, though we shall be glad when Prof. Fiedler's text of the "Nibelungenlied" is ready; what appears to be more immediately necessary is a good grammar, and a dictionary more accessible than Lexer's. Dr. Sandbach shows, by numerous specimens, that he could present a prose version at once accurate and readable, and capable of keeping the poets right on the text.

The introductions, while ample enough for the special object, might well be reconsidered separately, and expanded to much larger proportions, especially the introduction to the "Nibelungenlied"—say, on the lines of Ernest Koch's *Programmabhandlung* on the "Nibelungenlied" a generation back, with full discussion of origins, history, text, metre, and significance, and some substantial account of adaptations, such as Jordan's remarkable work. Meanwhile, the present volume will be very useful to serious students. It does great credit to the rising Mediæval School at Cambridge which Dr. Breul has laboured so indefatigably to build up.

THE SOCIAL SIDE OF BRITISH HISTORY.

Social England: a Record of the Progress of the People in Religion, Laws, Learning, Arts, Industry, Commerce, Science, Literature, and Manners, from the Earliest Times to the Present Day. Edited by H. D. Traill, D.C.L., and J. S. Mann, M.A. Vol. VI. (14s. net. Cassell.)

The illustrated edition of this comprehensive and laborious work is now complete. The various sections have been written by specialists (for the most part), so as to present a tolerably full view of the developments in each department. The education section in the final volume is somewhat sketchy, and certain influential organizations are ignored; and, although substantial treatment is limited to the period before 1885, the recent changes in the University system in London, Liverpool, Manchester, and Leeds might at least have been noted. Generally speaking, however, the work presents in very popular style a large and instructive outline of the national development on a basis of adequate scholarship. The co-ordination of the different subjects—a matter of much difficulty—has been very satisfactorily carried out; especially in the present volume, where the difficulty is greatest of all, the modern scientific branches of practical as well as of theoretical importance claiming considerable space. The distinctive characteristic of the edition is the illustrations. The present volume has 11 coloured plates, and nearly 450 illustrations; the descriptive list occupies more than 40 pages. The complete work contains 56 coloured plates, and about 2,550 illustrations. The subjects are fairly chosen so as to be really representative of the various departments of the text; and the whole series constitutes a remarkable pictorial representation of the life of the nation throughout its history. The work ought to be on the shelves of school and public libraries: merely to turn the pages and look at the pictures will be eminently instructive and suggestive. Paper and type are excellent, and the get-up is substantial and handsome.

GENERAL NOTICES.

MATHEMATICS.

A Modern Geometry. By G. A. Christian, B.A., and A. Pratt, B.A., B.Sc., F.R.A.S. (2s. Allman.)

Instruction in the theory of elementary geometry is here combined with a junior practical course. The volume deals with the subject-matter of the first two books of Euclid and with parts of the third. The little book is a useful one, and, though not free from minor inaccuracies of thought and expression, it nevertheless gives less frequent occasion for criticism in that respect than many text-books of the same class. Methods of general utility in the solution of riders are well illustrated by the full discussion of typical examples. The treatment of the subject of the determination of loci is not so satisfactory: the two-fold nature of the problem is both recognized and pointed out, but in nearly every case selected for discussion one aspect alone is considered, and no allusion whatever is made to the other. The definition of a straight line as the shortest distance

between two points is always an unhappy one; if, however, it is adopted, there is an obvious inconsistency in demonstrating as a theorem that two sides of a triangle are together greater than the third. Points such as those noted require revision; yet, granting their individual and collective importance, they still form too small a proportion of the entire volume to affect seriously its general excellence.

Theoretical Geometry for Beginners, Part III. By C. H. Allcock. (1s. 6d. Macmillan.)

The first two Parts appeared in the course of last year. We now have the third volume, in which Mr. Allcock devotes his attention to the substance of Euclid's Second Book, together with portions of Books III. and IV. Some further important propositions are demonstrated, and an excellent chapter on the Radical Axis and on Co-axial Circles is added.

MODERN LANGUAGES.—COMMERCIAL APPLICATIONS.

"Hooper and Graham Series." (1) *French Commercial Practice connected with the Export and Import Trade, Part I.* (2) *German Commercial Practice connected with the Export and Import Trade, Part I.* (3) *Spanish Commercial Practice connected with the Export and Import Trade, Part I.* By James Graham and George A. S. Oliver. (2s. 6d. each. Macmillan.)

The three books deal with the three great commercial languages as these are applied in actual commerce, the whole of the matter contained in them being "drawn from real business," and systematized by writers of long business and educational experience. They are "primarily characteristic of the trading practice" of the different countries. The writers assume a merchant doing a good home trade and desirous of developing a foreign trade in addition, and wishing his son to equip himself to look after this desired foreign department. They show the son in a simple and graduated way how to write plain business letters, how to carry through export and import transactions, and how to manage the correspondence at every point. Gradually they introduce him to transactions of increasing difficulty and complexity. A *questionnaire* is added to each chapter. The volumes are thoroughly well done, and form a valuable series. A second—more advanced—series is promised. These works mark a distinct advance in the work of linguistic preparation for commerce on a larger scale, and are certainly well calculated to "aid the maintenance and development of British commerce in foreign markets."

Englische Handelskorrespondenz. Von E. E. Whitfield, M.A. (80 pfg. Leipzig: Göschen.)

An excellent addition to a practical and useful series. First, a judicious exemplification of "Phraseologie" (both in German and in English), and then over a hundred forms in English illustrating transactions in different classes of business at the various stages. We have already spoken very favourably of Mr. Whitfield's work in commercial German, and the present little volume distinctly adds to his credit. It should be serviceable to English as well as to German commercial students.

Messrs. E. Marlborough & Co. issue a sixth edition of *French and English*, by A. Dudevant, in their useful series of "Foreign Commercial Correspondence," revised and enlarged, the editors being Tureau de Marney and C. A. Thimm (1s.). The French and the English occupy parallel columns, and there are tables of moneys, weights, and measures, &c.

SOME FRENCH READERS.

Perhaps the most simple, as well as the most seasonable, of the present pile of reading-books in French is *Des Vacances à Paris*, by Violet Partington (1s. 6d., Horace Marshall). The narrative is easy and vivid; the illustrations are numerous and appropriate; and the notes are just bits of translation, some of them perhaps superfluous, but perhaps still encouraging. A very attractive little book.

No. 4 of "Nutt's Short French Readers" (6d. each) is Legoff's story from *La Roche aux Mouettes*, which Jules Sandeau says he wrote for his little nephew Paul, to persuade him to learn to read. It will also, as Mr. de V. Payen-Payne, the editor, surmises, amuse—and instruct—English children. Brief notes are appended.

Messrs. Blackie's "Little French Classics" (4d. each) are steadily in course of reinforcement. Recent additions are (1) *Episodes from "La Révolution en Angleterre"* (Guizot), edited by W. G. Hartog, B.A.; (2) *Jacomo, ou le Brigand* (Alexandre Dumas), edited by Norman Frazer, M.A.; (3) *Select Fables of Florian*, edited by Marguerite D. M. Goldschmid, B.A.; and (4) *A Book of French Songs* (with music), selected and edited by Louis A. Barbé. The selections are all very good, and afford abundant variety; and the notes are brief and helpful. M. Barbé's songs will vividly impress the language, and arouse interest. They are sure to be extremely popular.

Popular also should be *La Moqueuse*, a one-act comedy by Clémence Saunois (1s., Hachette). The French is fluent, idiomatic, and quite easy—"a perfect little manual of the language of family life in France," says M. George Petilleau, who writes a warmly recommendatory introduction. The comedy appeals to boys as well as girls, and will be voted attractive.

Lectures et Mélanges, by W. G. Hartog, B.A. (2s. 6d., Rivingtons), is an easy and varied set of pieces in prose and verse "for boys and girls in their second and third years of French instruction," with oral and written exercises, vocabulary, and a number of good illustrations by Mary Williams.

CASSELL'S PRACTICAL COMPENDS.

Cassell's New Dictionary of Cookery. (12s. 6d. net.)

What is "the strong point of good cookery"? "Not its gratification of the palate, but its influence on health." How to combine both advantages may be fully learned from the 96 large pages of the introductory essay—"a complete treatise," indeed—on the principles of the science, written "by a gentleman in every way entitled to speak with authority." Then the distinctively practical part of the business is displayed in an alphabetical series of recipes—some 10,000—"the largest and most complete collection ever produced," more than 1,000 of them being new, the discoveries of "the greatest modern masters of the art." They occupy nearly 1,200 pages, double columns. There are 20 plates in colours, and several hundred illustrations. It is certainly a noble volume, teaching amply the principles and the practice of the art.

Cassell's Cabinet Cyclopædia. (12s. 6d. net.)

This work is based upon "Cassell's Concise Cyclopædia," the articles of which have been thoroughly revised, and supplemented by some 20 per cent. of new matter. The size is about the same—1,358 pages, double columns. While old subjects have been brought up to date, a great number of new subjects necessitated by the progress of events have been incorporated. The volume is a very handy repertory of a vast quantity of generally useful information judiciously selected, alphabetically arranged, and compactly digested. There are several hundred illustrations and diagrams, specially prepared for the work. The type is clear and readable, and the binding is strong and flexible. A concise, comprehensive, and most serviceable volume.

Cassell's Physical Educator. By Eustace Miles, M.A. (9s.)

Mr. Miles does nothing by halves. This volume may safely be declared to be thorough-going and exhaustive, defying description in detail. Exercise and diet—and not only the author's own meagre fare—suitable for all sorts and conditions of men, women, and children, are set forth, with reasons annexed. A most sensible and practical exposition, founded on a broad basis, and relieved by a constant flow of humour. There are upwards of 1,000 illustrations and diagrams; and the book is most liberally printed and agreeably got up.

ART—DESIGN—DRAWING.

Figure Drawing. By Richard G. Hatton, Hon. A.R.C.A. (Lond.). (7s. 6d. Chapman & Hall.)

Mr. Hatton considers that "the only way to master proportion is to get thoroughly acquainted with the aspect of the figure"; for "ultimately the artist will, in estimating the correctness of proportions, rely upon his eye, which he not unwisely trusts before all the science in the world." But the eye has to be educated; and Mr. Hatton aims at correcting the originally crude ideas of the student—at "modifying the rude forms latent in the mind into accurate forms"—so as to get at the more effective expression realizable from truer form. After all, the anatomist's results must be a decided help to the draughtsman, and Mr. Hatton does not rule them out, but only subordinates and postpones them. He even makes frequent use of anatomical terms, as is really unavoidable; and he gives a number of anatomical facts, "not so much because they are necessary, as because the reader is likely to want to have them accessible." The treatment is systematic and able, and the work, taken as it offers itself, will be found very instructive and practically valuable. It is liberally illustrated with 377 figures. The type and the get-up are excellent.

School Copies and Examples. Selected by W. R. Lethaby and A. H. Christie. (John Hogg. Artistic Crafts Series.)

The object of the series is "to make available for school purposes fine works of art in facsimile, and also to bring together examples carefully chosen as being educational and suggestive," so that the student "may at once have drawing-copies of a real kind, standards of excellence, and examples of historical art, which should stir his imagination and suggest the very purpose of art." The present group consists of 12 plates, including reproductions of examples of Bewick's animals, and of fine Italian prints of the fifteenth and sixteenth centuries, enlarged about four times. The collection is extremely varied and attractive, and will be most serviceable for school work.

The October issue of *The Art-Workers' Quarterly* (2s. 6d. net, Chapman & Hall) is the "National Competition" number, containing a critical survey of the works by students that gained awards in the national competition of schools of art and art classes under the Board of Education in 1904. The other articles are of the usual high standard, and there are eight supplementary plates, one of them coloured, and all of them beautifully reproduced.

Of Messrs. G. W. Bacon & Co.'s "Excelsior Drawing Publications" we have (1) *Nature Drawing and Design Cards*, in two parts, each containing 24 cards—12 of Nature (coloured) and 12 of designs (plain)—embracing upwards of 100 illustrations (2s. 6d. each packet)

(2) *Nature Drawing Cards* (corresponding to the large charts) for "Free-hand" and "Memory Drawing of Plant Form," "Blackboard Drawing," and "Design" (24 cards, coloured) 2s. 6d.; (3) *Brushwork and Design Cards*, coloured, in two parts—Part I., 12 cards, elementary (1s. 6d.), and Part II., 16 cards, advanced (2s.). All these cards are by Frank Steeley. They are excellently devised and executed, and will be found very useful in practice.—Also a new and enlarged edition of *The New Art Geometry* (Geometrical Drawing applied to Design), by Steeley and Trotman (2s.); with 16 plates, embracing 408 figures.—Part I. of *Bacon's Primary Drawing Copy-books for Infants and Juniors*, by Frank Steeley (2d.), is well devised and judiciously graduated.

Messrs. Macmillan offer a progressive series of *Nature Study Drawing Cards*—introductory (2), junior (3), and intermediate (3)—beautifully drawn and coloured.

Messrs. George Philip & Son present three *Nature Study Drawing Books*—Leaves, Flowers, Fruit (3d. net each)—by A. F. Lydon, carefully drawn and coloured, and well reproduced.

No. 4 of Messrs. E. J. Arnold & Son's "New Help to Nature-Study," "The 'A.L.' Dissected Plants," exemplifies *The Apple* (2s. net). The dissections consist of several overlapping folds, exhibiting structure of whole and parts. The scheme is elaborate and shrewdly executed; and the diagrams, which are carefully coloured, ought to be very helpful.

The tenth series of *Cassell's Saturday Journal Pictures*—8 pictures suitable for postcards and four larger pictures printed on plate paper—are issued to readers of the *Journal* in return for 6d. and a coupon appearing in the *Journal*. They are pretty and artistic, and incredibly cheap.

Machine Drawing, by Alfred P. Hill, A.M.I.M.E. (2s. 6d. net, King), is well adapted for giving engineering students a practical knowledge of the subject, as well as for enabling them to study elementary calculations connected with simple machines. The points are well selected and arranged, and the work is thoroughly practical. 36 plates.

ANNUALS.

Who's Who (7s. 6d. net, A. & C. Black) has grown to the very comfortable proportions of 1,796 pages, containing more than 17,000 biographies. It has made itself indispensable. The quantity of information is enormous, and the accuracy of it appears to be carefully maintained—a vital consideration.

Who's Who Year-Book (1s. net, A. & C. Black), a recent off-shoot from "Who's Who," is also growing well. The tables and lists are most serviceable, and there is still ample room for expansion. We are curious, however, to see what the General Medical Council will say about the table of "Some leading London Specialists" in medicine, and what other specialists of at least equal capability will think.

The Englishwoman's Year Book, edited by Emily Janes (2s. 6d. net, A. & C. Black), is now in its 25th year. It contains a vast amount of varied and useful information on all departments of women's interests. But we have once more to remonstrate with the editor: our own publisher is not "C. Arthur Pearson" (page 41), but F. Hodgson, and it would really be a practical convenience to have the correction made.

Whitaker's Almanack (2s. 6d. net, cloth, or 1s. net, paper) is, of course, indispensable. In its 37th year, it is still expanding according to public needs. The vast mass of information is systematically and compactly set forth, and care is taken to select the most pointed details for practical utility.

Whitaker's Peerage (3s. 6d. net) is really "a directory of titled persons," with much pertinent information about the various classes. It runs to 700 small-type pages.

Willing's Press Guide for 1905 (1s.)—the thirty-second annual issue—is a very convenient manual, reasonably full for reference, with a variety of pertinent general information.

The *Almanach Hachette* (2 fr.)—"petite encyclopédie populaire de la vie pratique"—is an extraordinarily comprehensive repertory of information, with many hundreds of illustrations. As usual, it is daintily got up.

Messrs. George Gill & Sons publish *The Modern Language Calendar, 1905*, with proverbs in three languages (English, French, and German) for each day in the year. The ingenious constructors of this interesting and artistic calendar are J. Eisner and Rose Lamartine Yates.

NEW YEAR GIFT-BOOKS.

VARIOUS MOODS.

His Young Importance, by Ralph Harold Bretherton (6s., Heinemann), is a careful and interesting study of a perverse youngster very much in need of wiser guidance and firmer handling. Though this is not Mr. Bretherton's first appearance, he has yet something to learn in the *technique* of his business. The dialogue and the analytical description might be better mixed with great advantage, and a critical revision would lead to the disappearance of occasional excursions in

unfortunate directions—for example, in the section (there are no chapters) on "Desecration." The matter is so good and so carefully worked up that one cannot but regret the technical weakness. For all that, the book will have many attractions for more thoughtful readers.

The Ocean Cat's-Paw, by G. Manville Fenn (5s., S.P.C.K.), is "the story of a strange cruise"—as strange as any that the prolific author has taken us on before. A chance meeting on Dartmoor (between English holiday-makers and escaped French prisoners), the finding and the fitting-out of the schooner, the *rencontre* with a suspicious-looking brig in Havre harbour, a run to the West Coast of Africa on a scientific expedition under auspices of Government, and then complications ensue. The hero and his scientific uncle make an entertaining pair, and Captain Chubb is drawn with a masterly hand. But those that have voyaged with Mr. Manville Fenn will be eager enough to embark with him again and to see for themselves the strange things he has in store for them. The story is brisk, vivid, and crisply written, and adventures are plentiful. There are several illustrations by W. S. Stacey.

England Expects, by Frederick Harrison (3s. 6d., S.P.C.K.), is, naturally, "a story of the last days of Nelson." An ugly thing in connexion with this "expectation" is the press-gang; and the story opens with a sample of its vile operations. After some land adventures, two youths, friends, get aboard different vessels—an English ship and a French privateer. Each has his experiences, and the reader sees both sides of the game. The events in Trafalgar's Bay are narrated in historical detail; and the private knots take considerable unravelling thereafter. The story is well written, and the interest is lively and sustained. Several illustrations.

Harter's Ranch, by F. B. Forester (2s. 6d., S.P.C.K.), with illustrations by Harold Piffard, is a very stirring story of the Wild West. What had become of the Cheyenne Company's express messenger from Silver City with the dollars for the men's pay? No dollars, no work, and three hundred men are in mutinous mood in the first chapter. The junior engineer undertakes to ride to Silver City—some 400 miles—for the money; and those that accompany him will find adventures in plenty, all concentrating on Harter's Ranch. The story is written with great verve, and it gives a striking picture of the times of the winning of the West, with strong sidelights on character and on the difficulties with Red Indians (Apaches). The dangers and roughnesses of the situation bring out the grit of the people. For the final cause of all the complications, *cherchez la femme*—only in this case *la femme* is entirely innocent.

The Story of Art throughout the Ages, by S. Reinach, Member of the Institute of France (10s. net, Heinemann), has been translated by Florence Simmonds, and handsomely furnished forth by the publisher with 584 illustrations excellently reproduced. The volume is based on lectures delivered by Prof. Reinach at the Ecole du Louvre, and is issued simultaneously with the French edition. Let us hope that the book will be as successful as the lectures; it thoroughly deserves to be so. The exposition is necessarily condensed, but the main points are carefully kept in prominence, and the result is a comprehensive and lucid display of the course of artistic theory and performance from primitive times down to the present day. Bibliographies appended to each chapter point the way to deeper and ampler study.

The Dog, by G. E. Mitton (6s., A. & C. Black), is the second volume of the instructive and entertaining series of "Animal Autobiographies." The dog tells his story from puppyhood onwards through a wide variety of experiences, with unflagging interest. Twelve illustrations by John Williamson.

The Green Adventure Book, edited by A. T. Quiller-Couch (5s., Cassell), is "a collection of stirring scenes and moving accidents from 'The World of Adventure,' with five plates and a great many illustrations. The contents are largely varied, and there is not a dull page in the volume. The book is sure to be a general favourite.

FROM FRANCE.

Messrs. Hachette offer handsome gift-books, interesting in matter, delightfully written, richly illustrated, and artistically got up. *Le Loup Noir*, by H. Le Charlieu (10 fr.), is one of the best stories of the season. The title rôle is appropriately filled by a rascal of a noble that got his elder brother banished to the Siberian mines, took possession of his estates, attempts to assassinate him on his return, and otherwise plays the villain of the piece. The scene is laid at St. Petersburg, with an excursion to Haarlem, in the reign of Catherine II. The story is brisk in movement and varied in interest, with quite adequate elements of excitement, and with virtuous characteristics fully counterbalancing the wickedness of the Black Wolf. Sixty-six fine wood engravings by Alfred Paris.—*La Pupille du Bonhomme*, from the busy pen of Pierre Maël (10 fr.), is a courageous and very successful attempt to depict in story certain aspects of literary and social Paris in the early part of the second half of the seventeenth century. The "Bonhomme" is La Fontaine, who is shown in the act of utilizing passing events in the composition of a number of his "Fables"

and Louis XIV., personages of the Court, Molière, Boileau-Despréaux, Colbert, and other magnates, political and literary, figure in the scenes. The "pupille" might have had a more attentive guardian, but perhaps she was fortunate enough, after all. The story mainly serves to exhibit the wayward career of La Fontaine, though it has its own interest besides; and it is very cleverly and amusingly managed. Sixty-six fine wood engravings by H. Vogel.

La Fille des Bohémiens, by Mme. Colomb, appears in a new edition, in the handsome "Bibliothèque des Ecoles et des Familles" (4 fr. 60 c., Hachette). It is a simple and very attractive story of a little gypsy, with 112 illustrations by S. Rejchan.—*Micheline*, by Augustin Filon, is a sample of the dainty "Petite Bibliothèque de la Famille," with five illustrations after H. Vogel (5 fr., Hachette). The behaviour of Micheline in face of the results of her father's bibliomania is charmingly portrayed, and the story is set in the revolutionary events of 1848. Three slight stories by the same author fill out the volume.—We have two specimens of the pretty "Bibliothèque Rose Illustrée": *Fluette*, by Mme. Chéron de la Bruyère (who has now contributed nearly a dozen volumes to the series), with 36 illustrations by Tofani; and *Mademoiselle Chou-Chou*, by G. du Planty (who has contributed half as many, including the charming "L'Oncle Bonasson" of last year), with 50 illustrations by Ed. Zier (3 fr. 50 c. each). They will be read with delight by youngsters that can pick their way through easy French with the spur of constant interest.

Lectures pour Tous for 1904 (9 fr., Hachette) has its usual complement of over 1,000 pages of most varied, instructive, and entertaining matter, with countless illustrations—an admirable periodical that ought to be widely read here in these days of modern language teaching.

J'apprends l'Orthographe, by Mlle. H. S. Brés (2 fr., Hachette), makes a delightful "album illustré," with four plates and 256 humorous illustrations. Lessons in prose and verse are constructed so as to impress the orthography of French in the most interesting way.—*Chansons du vieux Temps*, music and words found by J. Tiersot, and abundance of charming illustrations by Gerbault (4 fr., Hachette), is a fine collection of ten popular songs, furnished forth in very beautiful style. "Ces œuvres de poètes et de musiciens illettrés ne refermentelles pas maintes trouvailles ingénieuses qu'enverraient à leurs auteurs anonymes beaucoup de gens célèbres?"

For little beginners there is an "A B C" in several forms, all with plenty of pictures (many of them coloured): (1) *Leur A B C* ("leur" referring to the representative little boy and girl on the title-page); (2) *A B C de mon petit Garçon*; (3) *A B C de mes Bêtes*; (4) *A B C de Pierrot* (20 centimes each, Hachette).

NEW EDITIONS OF NOTABLE BOOKS.

Messrs. Macmillan have included in their beautiful series of "Illustrated Pocket Classics for the Young" (2s. net each) Charles Kingsley's *The Water Babies*, with 100 illustrations by Linley Sambourne, and *Westward Ho!* with some 50 illustrations by C. E. Brock; the ever interesting *Tom Brown's School Days* (by an Old Boy—Thomas Hughes), with some 80 illustrations by Edmund J. Sullivan; Fenimore Cooper's *The Last of the Mohicans*, with an instructive introduction by Mowbray Morris and with 25 illustrations by H. M. Brock, *The Deerslayer*, also illustrated by H. M. Brock, *The Pathfinder*, illustrated by C. E. Brock; and three of Captain Marryat's most popular novels—*Peter Simple*, illustrated by J. A. Symington; *Mr. Midshipman Easy*, illustrated by F. Pegram; and *The King's Own*, illustrated by T. A. Townsend. Charming volumes, attractively and substantially got up.

Messrs. Macmillan also issue the "Globe Library" edition of *Milton's Poetical Works*, edited, with introductions, by Prof. Masson, in a green leather limp binding, with full gilt back and gilt edges (5s. net). A beautiful and excellent volume, most suitable for a gift-book.—Moreover, the same publishers have added to their admirable "Prize Library" *Kenilworth* (Scott), with a charming introductory essay and brief notes by Andrew Lang (as well as Scott's own notes) and 12 illustrations drawn finely by Ad. Lalauze, and skilfully reproduced.

Mr. Henry Frowde publishes three most attractive "New Oxford Editions" of *Boswell's Life of Johnson*: (1) on Oxford India paper, in one volume of 1,416 pages, clear and handy (5s. net); (2) on Oxford India paper, in two volumes (3s. net each); and (3) on ordinary paper, in two volumes (2s. each), with portraits of Johnson and good index. The text is according to the third edition, issued under the superintendence of Edmund Malone in 1799, with Malone's (as well as Boswell's) notes at the foot of the page. Excellent editions for gift or for ordinary use.

Mr. John Murray presents, in a single substantial volume, a "popular edition" of Dean Stanley's classical *Life of Dr. Arnold*, of Rugby, with the appreciative preface furnished by Sir Joshua Fitch to the "Teacher's Edition" some three years ago (2s. 6d. net). The volume, in spite of the remarkably low price, is well got up, and there are 17 capital illustrations.

Mr. Fisher Unwin opportunely publishes a sixth edition of the well known, full, and sympathetic *Life of Gordon*, by Demetrius C. Boulger (6s.). There are two good portraits of Gordon and a photograph of the house he was born in (on Woolwich Common).

Messrs. A. & C. Black include in their fine series of "Beautiful Books" *The Pilgrim's Progress*, by John Bunyan, with eight illustrations in colour by Gertrude Demain Hammond, R.I. (6s.). The volume is well printed (with marginal headings and references) and it is flexibly bound in an artistic cover. An edition delightful to read and handle. A very acceptable edition.

Silas Marner appears in Collins's series of "Handy Illustrated Pocket Novels," well printed, with six illustrations, and beautifully bound in crushed roan (2s. net).

FIRST GLANCES.

CLASSICS.

Euripides. *Hercules Furens*. Edited by E. H. Blakeney, M.A. 2s. 6d. Blackwoods (Classical Texts).

[Notes and appendixes, pages 52-173; for upper forms. Seven full-page illustrations; three woodcuts (in notes). Admirably got up.]

Ovid. *Tristia*, Book I. With Introduction, Notes, &c., by G. H. Wells M.A. 1s. 6d. Blackie (Illustrated Latin Series).

[Notes, pages 40-96. Fifteen capital illustrations; two maps.]

Thucydides. *The Empire of Athens* (from Book I.). Edited by John M. Sing, M.A. 1s. 6d. Rivingtons (Middle Form Classics).

[Notes, pages 25-50; brief, useful. Appendix illustrating Attic syntax from the text. Excellent, handy.]

MATHEMATICS.

Algebra, Elementary. Part I. By W. M. Baker, M.A., and A. A. Bourne, M.A. 2s. 6d., or, with Answers, 3s. George Bell.

[To quadratic equations (inclusive).]

Algebra, Graphical, Solutions of the Examples in Hall's. By H. S. Hall, M.A., assisted by H. C. Beaven, B.A. Macmillan.

Arithmetic, Easy Exercises in. By W. S. Beard. 1s. 3d. Methuen.

[For beginners. 5,000 examples. With answers. Thoughtful and most serviceable selection.]

Arithmetic, Exercises in, Oral and Written. Part III. By C. M. Taylor. 1s. 6d. E. Arnold.

[Careful and elaborate; some special features; very helpful. Follows Mathematical Association's recommendations.]

Arithmetic, The Teachers' Black-Board. Part I. By "Tact." 1s. 6d. Blackie.

[General arrangement "new"; simplification "in a systematic and scientific manner."]

Arithmetics, McDougall's *Alexandra*. Scheme A: Book II., 2d.; Teacher's Book, 6d. net. Book IV., 3d.

[Sensible; practical; attractive.]

MODERN LANGUAGES.

Black's *Cours moyen et supérieur*. (1) *Le Baron de Fourchevif* (Labiche and Jolly)—Comédie en un Acte. Edited by A. H. Smith, M.A., L.-ès-L. Paris. (2) *Prose et Vers* (Gautier)—Selections. Edited by F. B. Kirkman, B.A. Oxon. (3) *La Délivrance de Schultz* (About)—deuxième partie du *Roi des Montagnes*. Edited by F. B. Kirkman, B.A. Oxon. 6d. each.

[Excellent readers; with brief notes. Illustrations.]

Blackie's *Little French Classics*. (1) *Jeanne d'Arc* (Michelet)—Selections. Edited by A. J. Perman, M.A. Lond. 4d. (2) *La Pierre de Touche* (Augier-Sandeau). Edited by H. W. Preston, M.A. In supplementary series of complete plays. 8d.

[Worthy additions to the series.]

Blackie's *Little German Classics*. *Hermann und Dorothea* (Goethe)—Select Scenes. Edited by Julius F. Schilling. 6d.

[Connexion of story supplied in English.]

SCIENCE.

Physics, Practical, A Preliminary Course of. By C. E. Ashford, M.A. 1s. 6d. Edward Arnold.

[Elaborated at Harrow. Extremely suggestive and useful.]

Physics, Practical, The "Junior Local." By the Rev. J. F. Tristram, M.A., B.Sc. 1s. 6d. Dent.

[“Sufficient for the first two years' work in a science school.”]

Science, *The Preparation of the Child for*. By M. E. Boole. 2s. Clarendon Press.

COMMERCIAL.

Commercial Geography of the World outside the British Isles. By A. J. Herbertson, Ph.D., F.R.S.E., Lecturer in Regional Geography in the University of Oxford. 2s. 6d. Chambers (Commercial Handbooks).

[Part I., General; Part II., Regional. Packed with good matter, yet readable. Very useful.]

Commercial Practice, Modern, with Correspondence. By F. Heelis, F.R.G.S. Part I.: *The Home Trade*. 2s. Macmillan (Hooper and Graham Series).

[“Series of transactions for use in connexion with classes in commercial practice or business methods.” Examples and exercises. Efficient.]

(Continued on page 36.)

OXFORD UNIVERSITY PRESS.

BOOKS SET AND SUITABLE FOR THE COLLEGE OF PRECEPTORS' EXAMINATIONS, 1905.

Shakespeare. Edited by W. ALDIS WRIGHT. **Julius Caesar**, 2s. **Twelfth Night**, 1s. 6d.

Scott.—**Lay of the Last Minstrel.** Edited by W. MINTO. Second Edition. 1s. 6d. Separately, Introduction and Canto I. 6d.

Concise French Grammar, including Phonology, Accidence, and Syntax, for use in Upper and Middle Forms. By A. H. WALL. Crown 8vo, cloth, 4s. 6d.

Oxford Modern French Series. Edited by LEON DELBOS, M.A. Crown 8vo, cloth. The first Eight Volumes are the following:—LAMARTINE'S "Deux Héroïnes de la Révolution Française," 2s. 6d.; BALZAC'S "La Vendetta" and "Pierre Grassou," 2s.; VICTOR HUGO'S "Bug-Jargal," 2s.; SANDEAU'S "Mademoiselle de la Seiglière," 2s. 6d.; CHATEAUBRIAND'S "Mémoires d'Outre-Tombe," 2s. 6d.; KARR'S "Voyage autour de mon Jardin," 2s.; GOZLAN'S "Le Château de Vaux," 1s. 6d.; "Extraits de Voyages d'Alexis de Tocqueville," 2s.

Tales of the Roman Republic, PART I. Adapted from the Text of Livy. By J. B. ALLEN. Extra fcap. 8vo, paper boards, 1s. 6d.

Caesar.—**The Gallic War.** BOOKS III-V. Edited by C. E. MOBERLY. Extra fcap. 8vo, cloth, 2s. 6d.

Horace.—**Odes, Carmen Saeculare, and Epodes.** By E. C. WICKHAM. Second Edition. Crown 8vo, cloth, 6s.

Virgil.—**Aeneid.** BOOKS I-III. By T. L. PAPILLON and A. E. HAIGH. Crown 8vo, stiff covers, 2s.

Euripides.—**Hecuba.** Edited by C. B. HEBERDEN. Extra fcap. 8vo, cloth, 2s. 6d.

Xenophon.—**Anabasis.** BOOK I. By J. MARSHALL. 1s. 6d. BOOK II. By C. S. JERRAM. 1s. 6d. BOOK III. 1s. 6d. BOOK IV. 1s. 6d. BOOKS III and IV, together. 3s.

Each volume has the full Vocabulary bound up with it; the Vocabulary can also be had separately for 1s.

Manual of the Four Gospels. By the Rev. T. H. STOKOE. With Maps. Crown 8vo, cloth, 3s. 6d. Or, separately, PART I, The Gospel Narrative, 2s.; PART II, The Gospel Teaching, 2s.

Manual of the Acts of the Apostles. By the same Editor. 3s.

School History of England to the Death of Victoria. With Maps, Plans, and select Bibliographies. By O. M. EDWARDS, R. S. RAIT, and others. Crown 8vo, cloth, 3s. 6d.

Historical Geography of the British Colonies. By C. P. LUCAS, C.B. Crown 8vo.

Introduction. New Edition by H. E. EGERTON. 1903. With Eight Maps. 3s. 6d. In cheaper binding, 2s. 6d.

Vol. I. The Mediterranean and Eastern Colonies (exclusive of India). With Eleven Maps. 1888. 5s.

Vol. II. The West Indian Colonies. With Twelve Maps. 1890. 7s. 6d.

Vol. III. West Africa. Revised to the end of 1899 by H. E. EGERTON. With Five Maps. 7s. 6d.

Vol. IV. South and East Africa. Historical and Geographical. With Eleven Maps. 1898. 9s. 6d.

Also PART I. Historical. 6s. 6d. PART II (1903). Geographical. 3s. 6d.

Vol. V. Canada, PART I. 1901. 6s.

Elementary Political Economy. By E. CANNAN. Fourth Edition. Extra fcap. 8vo, stiff covers, 1s.

A Geometrical Political Economy. Being an Elementary Treatise on the Method of explaining some of the Theories of Pure Economic Science by means of Diagrams. By H. CUNYNGHAME, C.B., M.A. Crown 8vo, cloth, 2s. 6d. net.

Book-keeping. New and Enlarged Edition. By Sir R. G. C. HAMILTON and J. BALL. Extra fcap. 8vo, cloth, 2s.

Ruled Exercise Book to the above, 1s. 6d.; to Preliminary Course only, 4d.

Arithmetic. With or without Answers. By R. HARGREAVES. Crown 8vo, cloth, 4s. 6d.

Practical Work in General Physics. By W. G. WOOLLCOMBE. Crown 8vo, cloth, 2s. each part.

PART I. General Physics. Second Edition, Revised. PART II. Heat. Second Edition, Revised. PART III. Light and Sound. PART IV. Magnetism and Electricity.

Class Book of Chemistry. By W. W. FISHER. Fourth Edition. Crown 8vo, cloth, 4s. 6d.

Euclid Revised, containing the essentials of the Elements of Plane Geometry as given by Euclid in his first six Books. Edited by R. C. J. NIXON. Third Edition. Crown 8vo, cloth, 6s.

Sold separately as follows:—BOOK I, 1s., BOOKS I, II, 1s. 6d.; BOOKS I-IV, 3s.; BOOKS V, VI, 3s. 6d.

Experimental and Theoretical Course of Geometry. By A. T. WARREN. Crown 8vo. With or without Answers. Second Edition (1903). Cloth, 2s.

Geometry for Beginners: an Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. Extra fcap. 8vo, stiff covers, 1s. 6d.

SOME RECENT SCHOOL EDITIONS.

A Primer of English Etymology. By W. W. SKEAT. Fourth and Revised Edition. Extra fcap. 8vo, stiff covers, 1s. 6d.

Selections from Gower's Confessio Amantis. Edited by G. C. MACAULAY. Fcap. 8vo, cloth, 4s. 6d.

The Moscow Expedition. Extracted from THIERS'S "Histoire du Consulat et de l'Empire," Vol. XIV. Edited, with Introduction and Explanatory Notes, by HERFORD B. GEORGE. With Maps. Crown 8vo, cloth, 5s.

Relations of Geography and History. By H. B. GEORGE. With two Maps. Crown 8vo, cloth, 4s. 6d.

Latin Exercises. By G. G. RAMSAY. In Three Volumes. Vol. I, Lower Grade. 1s. 6d. Vol. II, Higher Grade. 1s. 6d. Vol. III, Syntax. 2s. 6d.

Livy. BOOK VI. By A. R. CLUER. Second Edition. Revised by P. E. MATHESON. Fcap. 8vo, cloth, 2s.

The Preparation of the Child for Science. By M. E. BOOLE. Crown 8vo, cloth, uniform in size, binding, and price with Mrs. BOOLE'S "Logic of Arithmetic." 2s.

COMPLETE CATALOGUE POST FREE ON APPLICATION.

London: HENRY FROWDE, Oxford University Press Warehouse, Amen Corner, E.C.

Indexing and Précis, Skerry's Supplementary. 2s. 6d. net. Simpkin, Marshall, & Co.

[“Part II., Advanced Section, of Skerry's Practical Indexing and Précis Writing.” Material plentiful and well chosen; some of the exercises pretty tough.]

Indexing and Précis Writing. By Alfred Pratt, B.A., B.Sc., and Alice Eve, B.A., L.L.A. 1s. 6d. net. Normal Press.

[Abundance of material, well graduated; with preliminary exercises in condensation of language.]

Précis and Précis Writing. By A. W. Ready, B.A. 3s. 6d. George Bell.

[Second edition, revised. We repeat our commendations.]

Summaries, Digesting Returns into. By John Keefe, Principal of the Civil Service Academy, Liverpool and Manchester. 2s. 6d. Murray (Handbooks for Civil Service Examinations).

[Practical; serviceable for commercial and technical classes (for statistical work) as well as for Civil Service candidates.]

EDUCATION.

Board of Education. (1) Syllabuses and Lists of Apparatus applicable to Schools and Classes other than Elementary. 4d. DR. CORNWELL'S SCHOOL BOOKS

Edited by J. CORNWELL ROUND, M.R.C.S.

With numerous Revisions and Additions by BEN JONSON.

A SCHOOL GEOGRAPHY. Ninetieth (Memorial) Edition. With Coloured, Black-and-White, and Star Maps; also numerous Diagrams. The Reviser has brought this book thoroughly up to date, and it now contains 384 pages, exclusive of 64 pages of Maps. 3s. 6d.

“The book is an immense storehouse of accurate geographical information, and a very suggestive book to the teacher.”—*Educational Record*, June, 1904.

“Seeing that it has thirty-six coloured Maps, and nearly twice as many uncoloured, the price is wonderfully low.”—*Journal of Education*, July, 1904.

GEOGRAPHY FOR BEGINNERS. Seventieth Edition. Has been Enlarged and Revised, Maps and Diagrams having been also added. It now contains 160 pages of interesting matter. 1s.

“We have tested both these books on many points, and in every case with the most satisfactory results.”—*School Guardian*, May, 1904.

GRAMMAR FOR BEGINNERS. Ninety-first Edition. 1s. Revised, and with additional Section on Analysis of Sentences.

THE YOUNG COMPOSER. Forty-ninth Revised Enlarged Edition. Contains Sections on the Composition of Sentences, Paragraphs, Essays, Précis, Letters, Telegrams, and Commercial Documents, also on “Press Corrections.” 1s. 6d.

“The book is complete and practical.”—*School Guardian*, October, 1904.

“Altogether the book is a very valuable aid for those who wish to gain the power to write clearly, accurately, and gracefully.”—*School Manager*, October, 1904.

ALLEN AND CORNWELL'S SCHOOL GRAMMAR. 1s. 9d.

The Stock of Parliamentary Papers and Government Publications is now transferred to WYMAN & SONS, LIMITED, and all orders should be sent direct to WYMAN & SONS, LIMITED, FETTER LANE, FLEET STREET, LONDON; or to their West End Office, 32 ABINGDON STREET, WESTMINSTER, S.W.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL AND LOGICAL FOUNDATIONS OF INTELLECTUAL EDUCATION.

To be delivered by W. E. JOHNSON, M.A., Sidgwick Lecturer in Moral Science in the University of Cambridge.

The First Course of Lectures (Thirty-third Annual Series) will commence on Thursday, February 9th, at 7 p.m.

The Course, consisting of Twelve Lectures, will deal with Education, on its intellectual side, as based upon psychological and logical theories. References will be made throughout the course to the practical problems of teaching, and a constant endeavour will be made to show how theory may throw light upon practice. Directions will be given as to reading, and opportunities will be given after each lecture for the discussion (i.) of questions proposed by the students attending the course; and (ii.) of their answers to papers which will be set from time to time by the Lecturer.

SYLLABUS.

I.—The definition of education as a practical science. Its dependence upon the theoretical science of psychology. Its connection with the normative sciences of logic, æsthetics, and ethics. Education must assume general agreement in regard to the ultimate needs of life, and the criteria by which such ends are judged. It is a science of means, not of ends. The distinctions and relations between intellectual, artistic, and moral education. Practical aspects of the relations between mind and body. The scope and nature of so-called physical education.

II.—Methods and general results of psychological analysis. The chief methods of obtaining particular psychological data—(i.) the introspective, (ii.) the interpretative. Range, difficulties, and connections of these two methods. Special practical opportunities afforded to the teacher of contributing to psychological observation. The three fundamentally distinct factors of conscious experience—knowledge, feeling, activity: to be regarded as mutually dependent, not antagonistic. Education is concerned with the control of the conscious activities of the child. Forms and degrees of activity.

III.—Preliminary definitions of technical terms in psychology. Conation; desire and aversion; purpose. Interest; attention. The intellectual processes arranged in a rough scale according to order of development and defined: sensation, perception, observation, memory, imagination, conception, reasoning.

IV.—General principles of intellectual development. Retentiveness and modifiability. Differentiation and assimilation. Facility and familiarity. Practice and habit. Mental process and mental product. Acquisitions and applications. Active and receptive phases.

V.—The reference of intellectual processes to so-called faculties. The practical errors that have arisen from a false view of the distinctions and identifications of faculty—things connected which should be separated, and things separated which should be connected. The key for understanding the due connection and separation of educational aims and influences to be found in the principle of unity of interest. Interest as progressive and as involving subjective activity. Two-fold function of the teacher in regard to interest. Aspects of the doctrine of apperception as applied to education.

VI.—Perception as a direct and purposive co-ordination of sensory and motor elements. The acquisition of physical dexterities and aptitudes by practice. Connected development of the organs of sense and the organs of movement. Sense discrimination aided by motor production—speaking, drawing, singing, &c. Imitation as an instrument in the development of perceptual process. Observation, as in listening and watching, involves prospective and retrospective attention determined by continuity of purpose and interest.

VII.—Association or suggestion. Association involves a process of reintegration depending upon a previous integration. The process may be analysed as involving the relation either (a) between parts contained in a common whole, or (b) between wholes containing a common part. Different forms of association. Control of association by purpose. Co-operative and antagonistic associations. Technical aids and pedagogic maxims based on the doctrine of association.

VIII.—Memory—Ambiguities of the term; sometimes limited to reminiscence. Broadly it includes the reproduction, in a connected series, either (a) of movements, (b) of images, or (c) of ideas. In particular verbal memory depends on a repetition of the articulatory movements of speech. This process is more or less accompanied and assisted by corresponding images and ideas. The use of language thus depends on a double process of association.

IX.—Imagination: its three kinds—reproductive, interpretative, and originitive. Imagination and perception regarded by technical psychology as occupying corresponding or parallel ranges. The power of imagination gauged by (a) its vividness and consequent influence upon feeling, (b) its subservience to purposive control. Childish imagination not more vivid, but less controlled, than that of the adult. Difficulties in exercising the child's imagination through the medium of words. Practically, imagination cannot be separated from ideation. Illustrations from the teaching of geography and history.

X.—Ideas and conceptions. Knowledge develops from the relatively particular and indefinite to the relatively general and definite. The function of comparison in this process of development. The absence of relations of difference in knowledge not to be confounded with the presence of relations of agreement; nor the absence of relations of agreement to be confounded with the presence of relations of difference. Growth of knowledge manifested equally in the apprehension of new points of agreement and of new points of difference.

XI.—Grammatical and logical account of the forms of speech. The sentence or proposition as unit of thought. The child's power of understanding to be measured by consistency and complexity in the use of language. The teaching of composition. Logical definition and division. The extension and intension of terms, psychologically and logically treated.

XII.—General judgments and reasoning. The avoidance of inconsistency. Deductive and inductive inference. The heuristic method important both in deductive and inductive teaching. Educational aspects of the comparative methods of induction.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

C. R. HODGSON, B.A., Secretary.

MESSRS. CASSELL'S LIST.

NEW AND ENLARGED EDITION NOW READY OF

The Story of English Literature.

By ANNA BUCKLAND.

Brought down to date by CHRISTABEL COLERIDGE.

Cloth boards, 3s. 6d.

This New Edition contains chapters covering the Victorian Period. The volume gives a clear and attractive account of the development of English Literature, and the great names connected therewith, not in the form of an examination cram-book, but as a simple introduction to the subject. The new chapters are the work of Miss CHRISTABEL COLERIDGE.

CASSELL'S UNRIVALLED DICTIONARIES.

Cassell's New French Dictionary. (French-English and English-French.) Edited by JAMES BOÏELLE, B.A., Officier d'Académie, sometime Examiner in the University of London. 1,220 pp., cloth, 7s. 6d.; or in half-leather, 10s. 6d.

Cassell's French Dictionary. (French-English and English-French.) 711th Thousand. 1,150 pp., cloth, 3s. 6d.; half-morocco, 5s.

Cassell's German Dictionary. (German-English and English-German.) 327th Thousand. By ELIZABETH WEIR. 1,128 pp., demy 8vo. Cheap Edition. Cloth, 3s. 6d.; half-morocco, 5s.

Cassell's Latin Dictionary. (Latin-English and English-Latin.) 152nd Thousand. Thoroughly Revised and Corrected. Cheap Edition. 3s. 6d.; half-morocco, 5s.

FRENCH.

Cassell's Lessons in French. Cheap Edition, Revised. By JAMES BOÏELLE, B.A. Parts I. and II., 1s. 6d. each; complete in One Vol., 2s. 6d. KEY, 1s. 6d.

The Marlborough French Exercises. By the Rev. G. W. DE LISLE, M.A. Cloth, 3s. 6d.

The Marlborough French Grammar. Compiled and arranged by the Rev. J. F. BRIGHT, M.A. Cloth, 2s. 6d.

GERMAN.

First Lessons in German Reading. By A. JAGST. Illustrated. Cloth, 1s.

The Marlborough German Grammar. Compiled and arranged by the Rev. J. F. BRIGHT, M.A. Cloth, 3s. 6d.

LATIN.

The New Latin Primer. By Prof. J. P. POSTGATE. 17th Thousand. Cloth, 2s. 6d.

The First Latin Primer. By Prof. J. P. POSTGATE. Cloth, 1s.

Latin Prose. By M. A. BAYFIELD, B.A. Cloth, 2s. 6d.

HISTORY.

A History of England. By the Right Hon. H. O. ARNOLD-FORSTER, M.A., M.P. 28th Thousand, Revised. Fully Illustrated. Extra crown 8vo, 816 pp., bound in cloth, price 5s.; or handsomely bound, cloth gilt, 6s. 6d.

ART MANUALS.

Marine Painting in Water Colour. By W. L. WYLLIE, A.R.A. With 24 Coloured Plates. 60 pages, crown 4to, 5s.

Landscape Painting in Water Colour. By J. MACWHIRTER, R.A. With 23 Coloured Plates. Price 5s.

Cassell's Educational Catalogue will be sent post free on application

JUST PUBLISHED.

MURRAY'S SMALL CLASSICAL ATLAS FOR SCHOOLS

PRICE 6s.

EDITED BY G. B. GRUNDY, M.A., D.LITT., *Fellow and Tutor of Corpus Christi College, Oxford.*Folio (14 $\frac{1}{4}$ by 9 $\frac{3}{4}$ inches). With Index. Price 6s.

LIST OF MAPS.

- | | | | |
|---|--|---|--|
| <p>I. EMPIRES OF THE BABYLONIANS, LYDIANS, MEDES, AND PERSIANS.</p> <p>II. THE ROMAN EMPIRE B.C. 218—A.D. 100.</p> <p>III. THE ROMAN EMPIRE A.D. 1—300.</p> | <p>IV. BRITANNIA.</p> <p>V. HISPANIA.</p> <p>VI. GALLIA.</p> <p>VII. DANUBIAN PROVINCES OF THE ROMAN EMPIRE.</p> | <p>VIII. ITALIA.</p> <p>IX. EGYPT. ROME AND LATIUM. ROME IN THE TIME OF THE EMPERORS. ROME DURING THE REPUBLIC (ROME P.). ROMA QUADRATA. ANCIENT ROME. MODERN ROME. ENVIRONS OF THE FORUM ROMANUM.</p> <p>X. GRAECIA.</p> | <p>XI. AEGEAN SEA. ATHENAE. PIRAEUS. ACROPOLIS. PROPONTIS.</p> <p>XII. ASIA MINOR.</p> <p>XIII. THE PRINCIPAL BATTLE-FIELDS IN GREEK AND ROMAN HISTORY.</p> <p>XIV. PALESTINE.</p> |
|---|--|---|--|

The Maps in this Atlas incorporate the results of recent scholarship, and have been most carefully prepared so as to accentuate all the chief names and natural features of the countries, and by eliminating those of minor importance to avoid overcrowding. The use of colour contours, whilst displaying the configuration of the countries at a glance, enhances the effect of simplicity, which cannot be achieved in maps where the old-fashioned method of hachured mountains obscured the names. A complete Index adds to the utility of the volume, and the low price at which it is published (6s.) brings it within the reach of all Classical Students.

HISTORY.

By C. R. L. FLETCHER, M.A.

AN INTRODUCTORY HISTORY OF ENGLAND.

PART I.—FROM THE EARLIEST TIMES TO THE END OF THE MIDDLE AGES.

With Maps and Plans. Demy 8vo, 7s. 6d.

A SCHOOL HISTORY OF ENGLAND.

FROM THE EARLIEST TIMES TO THE ACCESSION OF KING EDWARD VII.

By Miss M. A. TUCKER, Newnham College, Cambridge.

With Coloured Maps, Plans, and Tables.

Crown 8vo, 2s. 6d.

[Just published.]

NEW EDITION.

LITTLE ARTHUR'S HISTORY OF ENGLAND.

By Lady CALLCOTT.

NEW EDITION. With 4 new Chapters and many additional Illustrations.

Fcap. 8vo, 1s. 6d.

The NEW CHAPTERS (lx.-lxiii.) may be had SEPARATELY. Price 6d. net.

SCIENCE.

A FIRST COURSE OF CHEMISTRY (HEURISTIC).

By J. H. LEONARD, B.Sc. Lond. With numerous Diagrams. Fcap. 8vo, 1s. 6d.

A FIRST COURSE OF PRACTICAL SCIENCE.

By J. H. LEONARD, B.Sc. Lond.

With a Preface by the late Dr. GLADSTONE, F.R.S.

Fcap. 8vo, 1s. 6d.

A FURTHER COURSE OF PRACTICAL SCIENCE.

MECHANICS, HYDROSTATICS, AND HEAT.

By J. H. LEONARD, B.Sc., and W. H. SALMON, B.Sc.

Fcap. 8vo, 2s.

The above books cover between them all the ground included in the Oxford and Cambridge Local Examinations under the following heads:—Elementary Science (Juniors) and Heat (Juniors); also Heat (Preliminary, Cambridge), Elementary Mechanics (Juniors, Cambridge), and Elementary Mechanics and Hydrostatics (Juniors, Oxford).

MATHEMATICS. GEOMETRY.

AN ELEMENTARY TREATISE ON THE THEORY AND PRACTICE OF EUCLID. Having in view the New Regulations of the Oxford and Cambridge Local, The London Matriculation, The Board of Education, and other Examinations.

By S. O. ANDREW, M.A., Head Master of Whitgift Grammar School, Croydon. Fcap. 8vo, 2s.

PRACTICAL ARITHMETIC.

AN INTRODUCTION TO ELEMENTARY MATHEMATICS.

By S. O. ANDREW, M.A., Head Master of Whitgift Grammar School, Croydon, and A. CONSTERDINE, M.A.

Complete, 2s. (with Answers, 2s. 6d.). Or in Two Parts, 1s. each.

ALGEBRA.

By E. M. LANGLEY, M.A., and S. R. N. BRADLY, M.A.

In Two Parts. PART I., 1s. 6d.; PART II., 2s.

Adapted to the requirements of the First and Second Stages of the Directory of the Board of Education.

LONDON: JOHN MURRAY, ALBEMARLE STREET, W.

SECOND YEAR OF PUBLICATION.

SCHOOL:

A MONTHLY RECORD OF EDUCATIONAL THOUGHT AND PROGRESS.

EDITED BY R. B. LATTIMER, M.A. PUBLISHED BY JOHN MURRAY. Sixpence net. Annual Subscription, 8s. post free.

The Publisher will be happy to send a Specimen Copy free on application.

The object of "SCHOOL" is to keep in touch with all developments of Education; to give its readers an interest in the questions which the recent change of system has inaugurated, and in the efforts made towards the solution of the problems of the day.

It is hoped that teachers, pupils, and the general public will find in its pages a stimulating record of progress, and useful and healthy practical assistance in the science of teaching.

Many of the leading educational experts have expressed their sympathy with "SCHOOL" and its objects, and special articles are being contributed from time to time by acknowledged leaders of thought in their own particular branches of Educational Science.

LONDON: JOHN MURRAY, ALBEMARLE STREET, W.

MATHEMATICS.

15636. (C. E. YOUNGMAN, M.A.)—Given two circles and a point, draw two parallel tangents, one to each circle, equidistant from the point.

Solutions (I.) by R. F. DAVIS, M.A.; (II.) by GEORGE SCOTT, M.A.; (III.) by JAMES BLAIKIE, M.A.

(I.) The envelope of a straight line parallel to, and equidistant from, two parallel tangents (one to each of two given circles) is a circle having its centre at the middle point of the join of the centres of the given circles and its radius equal to the semi-sum or semi-difference of their radii.

The solution of this problem therefore reduces to the simple operation of drawing tangents from a given point to two determinate concentric circles; so that there may be either four solutions, or two, or none.

(II.) Given two circles and a fixed point, draw parallel tangents, one to each, equally distant from the fixed point. Suppose the problem done and a parallel to the tangents drawn through the given point. If the points of contact are on opposite sides of the line joining the centres, the difference of the perpendiculars from the centres on the parallel through the given point will be equal to the difference of the radii, and is therefore given. Hence bisect the line joining the centres, join the bisection to the given point, and on this line describe a semicircle; with the bisection as centre and half the given difference as radius describe a circle; where this cuts the semicircle join to the given point: this joining line gives the direction of the required tangents. The problem thus reduces to a very old one, namely: Given three points, to draw through one of them a line so that the difference of the perpendiculars drawn to it from the other two may be given. Suppose that the points of contact are on the same side of the line joining the centres. Then the perpendicular from one centre on the parallel through the given point will be radius + half the interval of tangents, while the perpendicular on the same line falling from the other centre will be radius - half the interval; therefore the sum of the perpendiculars will equal the sum of the radii, and is therefore given. Accordingly proceed as before, but use half the sum instead of half the difference of the radii as the distance at which the semicircle is to be cut.

(III.) Let A be the centre of circle U, B of circle V, and let the radius of U be greater than that of V. Let P be the given point. Join BP

and produce it its own length to Q. With A as centre and radii equal to the sum and difference of the circles, describe the circles X, Y. From Q draw tangents QT₁, QT₂, QT₃, QT₄ to these circles. To any of these four tangents parallel tangents can be drawn to the circles U and V such that P is equally distant from them. This follows at once from the fact that P is equidistant from Q and B.

[The PROPOSER remarks that it is clear from these solutions (Mr. Blaikie's especially) that the following construction might be given thus: Draw a circle B' symmetrical to B with respect to P, and then the common tangents to A and B', and lastly parallels to these touching B. And the same first step will serve when the problem is to draw two equal circles touching each other at P; one of them to touch A also, and the other to touch B.]

15591. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Excluding $m = X^4 + 1$, state the forms of m for which $X^{12} + 1 \equiv 0 \pmod{m}$. Show how to find X when m is given. *Ex.*, $m = 99961$.

Solution by the PROPOSER.

m must be either a prime $p = 24\omega + 1$, or a product of such primes. A root of $x^{12} + 1 \equiv 0 \pmod{m}$ may be found by resolving m into its 2-ic partitions

$$m = a^2 + b^2 = c^2 + 2d^2 = A^2 + 3B^2.$$

Then, if x_3, x_4, x_{12} be (proper) roots of the congruences, $x^3 - 1 \equiv 0, x^4 + 1 \equiv 0, x^{12} + 1 \equiv 0 \pmod{m}$, it is known (see page xvii of the Introduction to the present writer's large *Tables of Quadratic Partitions*, now in course of publication) that x_3, x_4, x_{12} may be found from the linear congruences $x_3 \equiv (A-B)/2B, x_4 \equiv (c/2d), (a-b)/b, x_{12} \equiv x_3 \cdot x_4 \pmod{m}$.

Ex.— $m = 99961 = p$. Here

$$m = 295^2 + 156^2 = 293^2 + 2 \cdot 84^2 = 277^2 + 3 \cdot 88^2.$$

Then $x_3 \equiv (277-88)/2 \cdot 88 \equiv 189/176$, whence $176x_3 \equiv 189 \pmod{p}$. Solving, this gives $x_3 = 15336$. Next,

$$x_4 \equiv \frac{293}{2 \cdot 84} \cdot \frac{275-156}{156} \equiv \frac{293}{168} \cdot \frac{119}{156} \equiv \frac{4981}{32 \cdot 9 \cdot 13},$$

whence $32 \cdot 9 \cdot 13x_4 \equiv 4981 \pmod{p}$. Solving, this gives $x_4 = 6062$.

Lastly, $x_{12} \equiv 15336 \cdot 6062 \pmod{p}$, whence $x_{12} = \pm 3102$. The other six roots ($< p$) may be formed as the least positive or negative residues of $x_{12}^5, x_{12}^7, x_{12}^{11} \pmod{p}$.

Note.—The *Tables of Quadratic Partitions* above quoted give the above partitions of all primes not greater than 100,000 (if capable thereof), and therefore enable the roots of the following congruences to be found:— $x^2 + 1 \equiv 0, x^3 \mp 1 \equiv 0, x^4 + 1 \equiv 0, x^6 + 1 \equiv 0, x^{12} + 1 \equiv 0 \pmod{p}$ for all such primes up to the limit 100,000 by the solution of linear congruences only (see page xvii above quoted).

15435. (Professor NANSON.)—If t_r be the arithmetic mean of the r -th powers of n positive quantities which are not all equal, prove that $t_1, t_2, t_3, t_4, \dots$ are in ascending order of magnitude.

Additional Solution by the PROPOSER.

Compounding the arrays

$$\begin{matrix} a^r, b^r, \dots, & a, b, \dots, \\ a^{r-1}, b^{r-1}, \dots, & 1, 1, \dots, \end{matrix}$$

we get

$$s_{r+1}s_{r-1} - s_r^2 = \sum a^{r-1}b^{r-1}(a-b)^2,$$

where $s_r = \sum a^r$. Hence, if a, b, \dots are positive and not all equal, we have $s_r^2 < s_{r+1}s_{r-1}$, and hence also $t_r^2 < t_{r+1}t_{r-1}$. Thus we have

$$t_1 < t_2/t_1 < t_3/t_2 < \dots < t_r/t_{r-1} < t_{r+1}/t_r;$$

whence, by multiplication, $(t_{r+1}/t_r)^r > t_r$; so that $t_r^{1/r} < t_{r+1}^{1/(r+1)}$, and hence $t_1 < t_2^{1/2} < t_3^{1/3} < \dots < t_r^{1/r}$.

15601. (Professor NEUBERG.)—Soient A' le milieu du côté BC d'un triangle ABC; B' et B'' les points où AC est rencontré par la bissectrice intérieure et la bissectrice extérieure de l'angle B; C' et C'' les points de rencontre de AB avec les bissectrices intérieure et extérieure de l'angle C. Les circonférences A'B'C', A'B''C'' peuvent-elles toucher le côté BC sans que l'on ait AB = AC?

Solution by the PROPOSER and W. F. BEARD, M.A.

1. Si la circonférence A'B'C' touche BC et coupe encore AB en C₁ et AC en B₁, on a

$$\begin{aligned} (BA')^2 &= BC' \cdot BC_1, & (CA')^2 &= CB' \cdot CB_1, & AC' \cdot AC_1 &= AB' \cdot AB_1, \\ BC' &= ac/(a+b), & AC' &= bc/(a+b), & CB' &= ab/(a+c), & AB' &= bc/(a+c) \end{aligned}$$

donc

$$\begin{aligned} BC_1 &= \frac{a(a+b)}{4c}, & AC_1 &= \pm(c - BC_1) = \pm \left[c - \frac{a(a+b)}{4c} \right], \\ CB_1 &= \frac{a(a+c)}{4b}, & AB_1 &= \pm \left[b - \frac{a(a+c)}{4b} \right]. \end{aligned}$$

Le signe \pm s'applique respectivement au cas où les points C₁, B₁ sont situés entre A et B ou au-delà de A; c'est le même signe pour les deux points. La condition $AC' \cdot AC_1 = AB' \cdot AB_1$ se traduit par l'égalité

$$\left[c - \frac{a(a+b)}{4c} \right] \frac{bc}{a+b} - \left[b - \frac{a(a+c)}{4b} \right] \frac{bc}{a+c} = 0,$$

qu'on ramène facilement à

$$(b-c)[4bc(a+b+c) + a(a+b)(a+c)] = 0.$$

Elle exige $b-c = 0$.

2. Si la circonférence A'B''C'' touche BC et coupe encore AB en C₂, AC en B₂, il faut que C'' et B'' soient situés du même côté de BC, par exemple du côté opposé à A. La condition $AC'' \cdot AC_2 = AB'' \cdot AB_2$

$$\text{donne alors} \quad \left[c + \frac{a(b-a)}{4c} \right] \frac{bc}{b-a} - \left[b + \frac{a(c-a)}{4b} \right] \frac{bc}{c-a} = 0,$$

$$\text{ou} \quad (b-c)[a^3 - a^2(b+c) + 5abc - 4bc(b+c)] = 0.$$

Cette équation convient encore au cas où C'' et B'' sont situés au-delà de A par rapport à BC. Elle est vérifiée si $b-c = 0$ ou si

$$f(a) \equiv a^3 - a^2(b+c) + 5abc - 4bc(b+c) = 0 \dots \dots \dots (1).$$

Supposons $b > c$. Comme $f(b) = -4bc^2 < 0, f(b+c) = bc(b+c) > 0$, l'équation (1) admet au moins une valeur de a comprise entre $b-c$ et $b+c$. D'ailleurs, l'équation (1) a une seule racine entre b et $(b+c)$. En effet, les racines de l'équation $f'(a) = 0$ sont

$$a' = \frac{1}{2}[b+c - \sqrt{(b^2 - 13bc + c^2)}], \quad a'' = \frac{1}{2}[b+c + \sqrt{(b^2 - 13bc + c^2)}].$$

Si le rapport b/c est compris entre $\frac{1}{2}(13 - \sqrt{165})$ et $\frac{1}{2}(13 + \sqrt{165})$, a' et a'' sont imaginaires, la dérivée $f'(a)$ est toujours positive et la fonction $f(a)$ croît constamment avec a et ne peut s'annuler qu'une seule fois. Si $b/c < \frac{1}{2}(13 - \sqrt{165})$ ou $> \frac{1}{2}(13 + \sqrt{165})$, a' et a'' sont réelles et l'équation $f(a) = 0$ a au plus une racine réelle dans chacun des intervalles $(-\infty, a'), (a', a''), (a'', \infty)$. Donc l'intervalle $(b, b+c)$, étant compris dans l'intervalle (a'', ∞) , a une seule racine de $f(a) = 0$.

15620. (D. BIDDLE.)—ABC being a given plane triangle of which I is the in-centre, draw tangents to the in-circle across the angles, so that the three resulting triangles may be equal and have a maximum area.

Solution by W. F. BEARD, M.A.

Let x, y, z be the lengths of the tangents which cut off the required equal triangles of maximum area. Then the areas of the triangles are $r(s-a-x), r(s-b-y), r(s-c-z)$. Thus $a+x = b+y = c+z$, and these are to be of minimum value. If $a > b > c$, then the least value of x is the length of the tangent which is bisected by the arc nearest to A; if this length = a_1 , then* $y = a-b+a_1, z = a-c+a_1$. Drawing tangents of these lengths, we obtain the required triangles.

[The PROPOSER suggests the following method for completing the construction of the required tangents:— x, y, z being the bases of the three equal triangles, let h_x, h_y, h_z be the respective heights. Then $xh_x = yh_y = zh_z$, and, h_x being now given, it is easy to geometrically determine h_y, h_z from the values found of x, y, z . Next, join BI, CI, and on them, as diameters, describe circles; also draw from B, C chords equal respectively to h_y+r, h_z+r joining the distant extremities with I. The required intercepts will be afforded by parallels (to these joins) tangential to the in-circle of the given triangle, the points of contact being found by parallels through I to the respective chords.]

15637. (C. E. HILLYER, M.A. Suggested by Question 14111, Vol. LXXI.)—Prove that the mid-points of the segments intercepted by the axes of a conic on the sides of a self-conjugate triangle are collinear; and that the circles described on these segments as diameters cointersect on the circum-circle of the triangle.

Solution by the PROPOSER.

Let ABC be a triangle self-conjugate with respect to a conic whose centre is P, and let the axes meet BC in L and L'. Join PA, meeting

the circum-circle of ABC in a , and BC produced in A' . Draw PD parallel to AB to meet BC in D. Then PA' and the parallel to BC through P are conjugate radii, as also are PD, PC and PL', PL ; therefore L, C, D, L' form an involution of which A' is the centre: therefore $A'C.A'D = A'L.A'L'$. But, since $CDP =$ supplement of $ABC = CaA$, P, D, C, a are concyclic: therefore $A'C.A'D = A'a.A'P$; and therefore $A'L.A'I' = A'a.A'P$; therefore L, a , P, L' are concyclic, i.e., the circle on LL' passes through a . Similarly the circle on MM' passes through b , and the circle on NN' through c .

It is required then to prove that the circles with their centres on the sides of the triangle ABC and passing through P, a and P, b and P, c respectively cointersect on the circum-circle. Let the first of these circles whose centre is a , the mid-point of LL' , meet the circum-circle in p , and let β be the centre of the circle Pbp ; it will be sufficient to prove that β is in AC.

Now $pAB = pbB =$ supplement of $pbP = \frac{1}{2}p\beta P = P\beta a$ and $pBA = paP = p\alpha\beta$;

therefore the triangles pBA and $p\alpha\beta$ are directly similar; and therefore also the triangles $Ap\beta$ and Bpa are directly similar: therefore the angle between βA and aB is equal to ApB ; therefore βA meets aB on the circum-circle, i.e., at C; therefore β is in CA. Similarly, the third circle also passes through p . Thus the three circles cointersect on the circum-circle and their centres are collinear.

* N.B. $a-b+a_1 < s-b$, for $a_1 < s-a$, which shows that it is possible to draw y, z of the required lengths.

Note.—In general one pair of perpendiculars can be drawn through a given point so as to intercept segments on the sides of a triangle whose mid-points are collinear, viz., the axes of the conic having the given point as centre with respect to which the triangle is self-conjugate.

If, however, the given point is the orthocentre of the triangle, then the conic is a circle (real or imaginary) of which any two diameters at right angles are conjugate. Hence Question 14111 is seen to be a particular case of the above.

15668. (Professor NANSON.)—The locus of the meet of perpendicular planes through two fixed lines is a quadric. Show that the three quadrics thus derived from the three pairs of opposite edges of a tetrahedron have a common curve of intersection.

Solution by W. H. BLYTHE, M.A.

Let a, b, c, d be the tetrahedron. Draw ae perpendicular to bed ; then the plane ace is perpendicular to the base plane bed , so that ec is one of the generators of the conicoid through the opposite edges ac, bd . Therefore the point e is on the conicoid, and may be similarly shown to be on the other two conicoids. We find then that the four points in the faces of the tetrahedron where the perpendiculars from the opposite vertices meet them are on the three conicoids; so also are the angular points of the tetrahedron.

Since the conicoids have eight points in common, they have a common curve of intersection. (Salmon's *Geometry of Three Dimensions*, p. 110.)

If we take A, B, C, D as the areas of the faces, and represent the angle between the planes A, B by (AB) , using areal co-ordinates, the equation to the curve becomes

$$BC \cos (BC) \alpha \delta + AD \cos (AD) \beta \gamma = DC \cos (DC) \beta \alpha + AB \cos (AB) \gamma \delta = BD \cos (BD) \alpha \gamma + AC \cos (AC) \beta \delta.$$

Note.—This problem may also be proved by projective axial pencils.

15619. (Professor NEUBERG.)—Soient A, A' les extrémités d'un axe d'une ellipse, M un point mobile sur cette courbe. On inscrit au triangle MAA' un carré PQRS dont le côté RS repose sur AA' . Trouver les lieux des points P, Q et du centre du carré.

Solutions (I.) by Professor SANJANA, M.A.; (II.) by R. TUCKER, M.A., and others.

(I.) Drawing the ordinate MK, we have

$$\begin{aligned} PS/SA &= MK/KA, \\ PS/RA' &= QR/RA' \\ &= MK/KA'; \end{aligned}$$

$$\begin{aligned} \text{hence } PS^2/(SA \cdot RA') &= MK^2/(AK \cdot KA') \\ &= BC^2/AC^2. \end{aligned}$$

Let $PS = y, AS = x$; then

$$y^2/[x(2a-x-y)] = b^2/a^2 \text{ or } a^2y^2 + b^2x^2 + b^2xy - 2ab^2x = 0,$$

an ellipse going through A. So the locus of Q will be an ellipse going through A' .

If O be the centre of the square, with co-ordinates f, g , we have $f = x + \frac{1}{2}y, g = \frac{1}{2}y$, so that $y = 2g, x = f - g$; hence, for O,

$$a^2 \cdot 4g^2 + b^2(f-g)^2 + b^2 \cdot 2g(f-g) - 2ab^2(f-g) = 0,$$

i.e., $b^2f^2 + (4a^2 - b^2)g^2 - 2ab^2f + 2ab^2g = 0$, and the locus is an ellipse going through both A and A' .

(II.) Let the perpendicular $MX = p$; side of square = y . Then $OX^2/a^2 + p^2/b^2 = 1$ (i.), O, the midpoint of AA' , being the origin.

$$p/y = 2a/(2a-y) \dots (ii).$$

Now

$$\begin{aligned} OX &= a - XA' \\ &= a - (a-x)(p/y) \\ &= [a(2x-y)]/(2a-y) \text{ (iii).} \end{aligned}$$

$$\text{Hence } [(2x-y)/(2a-y)]^2 + 4a^2y^2/[b^2(2a-y)^2] = 1$$

$$\begin{aligned} \text{by (i.), i.e., } & \beta^2(2x-y)^2 + 4a^2y^2 = \beta^2(2a-y)^2, \\ \text{i.e., } & \beta^2x^2 - \beta^2xy + a^2y^2 = \beta^2(a^2 - ay), \end{aligned}$$

i.e., an ellipse, because $\beta^2 < 4a^2$ is the locus of P.

Again, for locus of Q, if $OR = x'$, then $OX = [a(2x'+y)]/(2a-y)$, and the locus is $\beta^2x'^2 + \beta^2x'y + a^2y^2 = \beta^2(a^2 - ay)$, and the result is similar to the former.

Again, if X', Y' be the co-ordinates of the centre of the square in one position, $x' + x = 2X' = 2x' + y = 2x' + 2Y'$ and $y = 2Y'$; hence $x' = X' - Y'$. Substituting for x in the last equation, we get

$$\beta^2(X' - Y')^2 + 2\beta \cdot Y'(X' - Y') + 4a^2Y'^2 = \beta^2(a^2 - 2aY')$$

or $\beta^2 X'^2 + (4a^2 - \beta^2) Y'^2 = \beta^2 (a^2 - 2aY')$;
therefore the locus is an ellipse, because $2a > \beta$.

15671. (Professor SANJANA, M.A.)—From the centre of curvature at every point of a central conic the two normals other than the radius of curvature are drawn. Prove that the envelope of the chord joining the feet of these normals is $x^3/a^3 \pm y^3/b^3 = 1$, and that the locus of the pole of this chord is $a^2/x^2 \pm b^2/y^2 = 1$, the conic being referred to its axes.

Solution by A. S. TOMBE, M.A.

The feet of the four normals passing through (α, β) lie on the conic

$$c^2xy + b^2\beta x - a^2\alpha y = 0 \dots\dots\dots (1).$$

If $lx + my + 1 = 0$ join one pair of feet and $l'x + m'y + 1 = 0$ the other pair, then

$$(lx + my + 1)(l'x + m'y + 1) + x^2/a^2 + y^2/b^2 - 1 = 0 \dots\dots\dots (2)$$

is a conic through four feet and also through the centre of the ellipse. Comparing (1) with (2), $ll' = -1/a^2$, $mm' = -1/b^2$. If $lx + my + 1 = 0$ touches the ellipse, then

$$1 = a^2l^2 + b^2m^2 \dots\dots\dots (3);$$

we have therefore to find the envelope of

$$l'x + m'y + 1 = 0 \text{ or } x/a^2l + y/b^2m - 1 = 0 \dots\dots\dots (4)$$

with condition (3).

Differentiating in the usual way, we get

$$a^2l/(a^2y - a^2b^2m) = b^2m/(b^2x - a^2b^2l) = 1/(-a^2b^2lm).$$

Using (3), we get $x = a^4l^3$, $y = b^4m^3$; therefore $(x/a)^3 + (y/b)^3 = 1$. For the locus of the pole of (4) compare it with $Xx/a^2 + Yy/b^2 = 1$; therefore $x = 1/l$, $y = 1/m$; therefore, using (3), $a^2/x^2 + b^2/y^2 = 1$. For the hyperbola change b^2 into $-b^2$.

15579. (Communicated by Rev. T. WIGGINS, B.A.)—Sum to infinity the series $\sin^2 \theta - 3/2 \sin^2 2\theta + 3^2/3 \sin^2 3\theta - 3^3/4 \sin^2 4\theta + \dots$

[Note.—This was one of several series proposed for solution at an examination conducted by the Board of Education. Is the series convergent?]

Solution by C. M. ROSS.

In the first place let

$$\begin{aligned} S &= \sin^2 \theta - \frac{1}{2}m \sin^2 2\theta + \frac{1}{3}m^2 \sin^2 3\theta - \frac{1}{4}m^3 \sin^2 4\theta \dots \\ &= \frac{1}{2} (1 - \frac{1}{2}m + \frac{1}{3}m^2 - \frac{1}{4}m^3 + \dots) - \frac{1}{2} (\cos 2\theta - \frac{1}{2}m \cos 4\theta + \frac{1}{3}m^2 \cos 6\theta - \dots) \\ &= (1/2m) \log (1 + m) - (1/2m) \log (1 + 2m \cos 2\theta + m^2) \quad [\theta \neq (2n + 1) \frac{1}{2}\pi]. \end{aligned}$$

Now $m > 1$. Hence the given series is not convergent. If m were $\frac{1}{3}$ instead of 3,

$$S = \frac{3}{2} \log \frac{4}{3} - \frac{3}{2} \log (\frac{4}{3} + \frac{2}{3} \cos 2\theta) = \frac{3}{2} \log 2 - \frac{3}{2} \log (2 + \cos 2\theta).$$

15683. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find a general expression for triangular numbers consisting of a certain digit repeated n times followed by another (different) digit repeated n times.

Solution by the PROPOSER.

A slight examination of triangular numbers will show that

$$x = 666 \dots 6 = 6 \cdot \frac{1}{9} (10^n - 1)$$

is the only number giving $T = \frac{1}{2}x(x + 1)$ of form required for small values of n . And in the general case

$$\begin{aligned} \frac{1}{2} [6 \cdot \frac{1}{9} (10^n - 1)] [6 \cdot \frac{1}{9} (10^n - 1) + 1] &= \frac{1}{9} (10^n - 1) (2 \cdot 10^n + 1) \\ &= [2 \cdot \frac{1}{9} (10^n - 1)] 10^n + \frac{1}{9} (10^n - 1) = 222 \dots 22111 \dots 111, \end{aligned}$$

(n two's followed by n units), as required.

QUESTIONS FOR SOLUTION.

15695. (H. A. WEBB, B.A.)—A spider and a fly are a feet apart. The fly starts moving in a direction at right angles to the line joining the animals, and continues moving with uniform velocity v feet per second in a straight line. At the same moment the spider starts moving towards the fly, and continues moving with uniform speed u feet per second ($u > v$) along the "curve of pursuit," i.e., at any moment the spider is moving directly towards the fly. Show that the spider will catch the fly after $au/(u^2 - v^2)$ seconds.

15696. (G. H. HARDY, M.A.)—Prove that

$$\frac{M_s}{-s} \frac{M_s}{-\infty} \frac{e^{(2m\theta + 2n\phi)\pi i}}{a + m\omega_2 + n\omega_1} = e^{a(\eta_2\theta/\omega_2 - \eta_1\phi/\omega_1)} \frac{\sigma(a + a - \beta)}{\sigma(a)\sigma(a - \beta)},$$

provided that $0 < \theta < 1$, $0 < \phi < 1$; that $\text{Re} \omega_2 / (i\omega_1) > 0$; and that $\sigma(a) \neq 0$.

15697. (Professor E. B. ESCOTT.)—Find all the integral solutions, if possible, of the equation $x^2 - 17 = y^3$.

15698. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorize into prime factors $N = (2^{127} + 2^{63} + 1)^2 + 2^{64}$; this contains 77 figures.

15699. (JAMES BLAIKIE, M.A.)—Prove that $m^{2n+1} + (m-1)^{n+2}$ is a multiple of $m^2 - m + 1$ [e.g., $1000^{15} + 999^9 = M(999001)$].

15700. (Professor NANSON.)—Eliminate the variables from

$$L_1/M_1 = L_2/M_2 = \dots = L_n/M_n$$

where L_p, M_p are linear homogeneous functions of $n - 1$ variables.

15701. (A. M. NESBITT, M.A.)—In the expansion of $(1 + x + x^2 + x^3)^n$ find the sum of the coefficients of x^{kn+r} where r is fixed (≥ 0 but $< n$), and k has all integral values from 0 to $3 - r/n$. [Examples.—If $n = 3$, the three sums are $r = 0, s = 22$; $r = 1, s = 21$; $r = 2, s = 21$. If $n = 4$, the four sums are each 64. If $n = 5$, the sum when $r = 0$ is 204, and for any of the other four values of r is 205.]

15702. (J. J. BARNVILLE, B.A., I.C.S.)—Having $u_n + u_{n+1} = u_{n+3}$ prove that

$$\begin{aligned} \frac{1.9.16}{1.2.3.6} + \frac{1.13.22}{2.3.4.7} + \frac{1.16.29}{4.4.5.9} + \frac{2.22.38}{3.5.7.13} + \dots &= \frac{119}{12}; \\ \frac{1.1.6}{2.3.3.4} - \frac{1.2.7}{2.3.4.5} + \frac{1.3.10}{3.4.6.7} - \frac{2.3.13}{4.6.7.9} + \dots &= 0. \end{aligned}$$

15703. (Communicated by A. V. KUTTI KRISHNA MENON, B.A.)—Prove that

$$\begin{aligned} \cos ax &= 1 - ax \sin bx - [a(a-2b)/2!]x^2 \cos 2bx + [a(a-3b)^2/3!]x^3 \sin 3bx \\ &\quad + [a(a-4b)^3/4!]x^4 \cos 4bx - \dots \end{aligned}$$

[Note.—The Proposer desires to obtain an elegant solution.]

15704. (R. F. WHITEHEAD, B.A.)—Expand $\theta/\sin \theta$ in ascending powers of $\cos \theta$.

15705. (S. C. BAGCHI, B.A.)—Four pairs of inverse points are taken on a cubic which is its own inverse in normal co-ordinates. The joins of corresponding points cut a series of straight lines in points ${}_rP_s$ ($r = 1, s = 1, 2, 3, 4$ for the first line of the series; $r = 2, s = 1, 2, 3, 4$ for the second; and so on). These points are mapped into curves in another part of the plane. The scheme of transformation

$${}_rP_s = \phi(x, y, {}_r\lambda_s)$$

gives that the range formed by the points where a parallel to the y -axis in the transformed figure cuts a group of four curves is equi-cross with any of the ranges in the first figure. Show that $\phi = u$ (u being a solution of Riccati's equation) is a possible form.

[Note.—The word "inverse" is to be taken in the general sense given by Salmon; see *Higher Plane Curves*.]

15706. (Professor COCHEZ.)—Construire les courbes

$$(1) \rho^2 = a + b \sin \omega + c \sin^2 \omega, \quad (2) \rho = \sin \omega / (2\omega - 3 \cos \omega).$$

15707. (Professor NEUBERG.)—On joint le sommet A d'une ellipse à un point quelconque M de cette courbe; la perpendiculaire en M sur AM rencontre l'ellipse en un second point N; enfin on achève le rectangle AMNP. Trouver le lieu du point P.

15708. (Professor NANSON.)—From Pascal's theorem deduce the equation of a conic referred to any two conjugate diameters as axes.

15709. (C. E. YOUNGMAN, M.A.)—The problem, To draw through a given point P across a triangle ABC a transversal DEF such that D bisects EF, belongs properly to the parabola (see Question 15456, Vol. VI., New Series, p. 103); but for actual drawing the following construction is easier:—Draw PMN parallel to BC (M on CA, N on AB); on it PL = PN; LV parallel to AB (V on CA); slide MV along CA till M comes to C, and then at its mid-point m erect a perpendicular mp = $\sqrt{CA \cdot CM}$; then mE = Cp, or (when P is below BC) pE = Cm. Prove geometrically, and modify for the case when DE : DF is to be a given ratio.

15710. (R. TUCKER, M.A.)—ABC is a triangle; d, e, f are the mid-points of the sides. Through the points d, e, f are drawn the anti-parallel $d'L', dM; eM', eK, fK', fL$, thus forming two triangles $K'L'M', KLM$. Prove

$$BC \cdot KK' + CA \cdot LL' + AB \cdot MM' = 0 \text{ (attention to signs) } \dots (i.);$$

$$2ABC - \Sigma CK'L' - \Sigma CKL = \Delta (11a^2b^2c^2 - \Sigma a^2 \cdot \Sigma b^2c^2) / 4a^2b^2c^2 \dots (ii.);$$

the equation to the circle KLM

$$D \cdot \Sigma \alpha\beta\gamma = \Sigma \alpha a \cdot \Sigma e^2 (2e^2 - a^2) (3a^2b^2 - b^4 + b^2c^2 - 2c^2a^2) \alpha \alpha \dots (iii.);$$

and to the circle K'L'M'

$$D' \cdot \Sigma \alpha\beta\gamma = \Sigma \alpha a \cdot \Sigma b^2 (2b^2 - a^2) (3c^2a^2 - e^4 + b^2c^2 - 2a^2b^2) \alpha \alpha$$

where $D \equiv 4abc [4a^2b^2c^2 - 2(a^4b^2 + b^4c^2 + c^4a^2) + a^2b^4 + b^2c^4 + c^2a^4]$

and $D' \equiv 4abc [4a^2b^2c^2 - 2(a^2b^4 + b^2c^4 + c^2a^4) + a^4b^2 + b^4c^2 + c^4a^2]$.

Find also the points O, O' (MacClelland, *Geometry of the Circle*) for the circles CLK, ALM, BMK and CL'K', AL'M', BM'K'.

15711. (I. ARNOLD.)—The sides of a plane triangle are in arithmetical progression. It is required to construct it when the common difference and vertical angle are given.

15712. (Professor SANJANA, M.A.)—In the triangle ABC, AD is the median to the side BC and GQ is the perpendicular to BC from G, the median point; also AD₁ is the symmedian, and KQ₁ the perpendicular from K, the symmedian point; segments ER, E₁R₁ and FS, F₁S₁ are similarly taken on CA and AB. Prove that

$$(D_1Q_1/DQ)(l^2 + e^2) + (F_1R_1/ER)(c^2 + a^2) + (F_1S_1/FS)(a^2 + b^2) = 12S \tan \omega.$$

15713. (Professor LAUVERNAV.)—Dans un triangle rectangle ABC, α, β, γ sont les points de contact de cercles ex-inscrits respectivement avec les côtés BC, CA, AB. Démontrer que, si les droites $A\alpha, B\beta, C\gamma$ sont concourantes sur la circonférence inscrite à ce triangle, les côtés de ce triangle sont proportionnels aux nombres 3, 4, 5.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9512. (ARTEMAS MARTIN, LL.D.)—The sides of a triangle are known not to exceed the lengths a, b, c . Find the chance that it is acute.

9924. (C. E. McVICKER, B.A.)—Two ellipses A, B have double contact. An ellipse C, confocal with A, meets B in four real points, and the common tangents to B, C are drawn. Using Graves's theorem, prove that one pair of the endless bands formed by these common tangents and the intercepted arcs are of equal length. Also note the following cases:—(a) when B reduces to a point pair (Graves's theorem); (b) when C reduces to a point pair, *i.e.*, the foci of A. Deduce MacCullagh's theorem by supposing B in case (b) to pass through one focus of A.

10285. (H. W. SEGAR.)—Show that the surfaces

$$xyz = a^3, \quad x^2(y^2 + z^2) = c^3(y^2/z^2 + z^2/y^2)$$

cannot have a common tangent plane without touching each other.

10376. (Professor SYLVESTER.)—If ϕ, ψ, ω are three algebraic functions of x, y, y', y'' such that ϕ', ψ', ω' contain a common factor $\theta(x, y, y', y'', y''')$, show that the complete primitive of $F(\phi, \psi, \omega) = 0$, where F is any function form, may be found algebraically.

[Professor Sylvester remarks that this question is an extension of a well known principle of Lagrange, and that it may itself be indefinitely extended in more than one direction.]

10465. (J. C. MALET, F.R.S.)—Writing $f(k, \theta)$ for

$$\sqrt{[k \sin \theta \cos \theta / (1 - k \sin^2 \theta)]},$$

prove that $2 \int_0^{\frac{1}{2}\pi} f(k, \theta) d\theta = \int_0^{\frac{1}{2}\pi} f(\lambda, \theta) d\theta$,

λ and k being connected by the relation

$$(1 - \lambda)^{\frac{1}{2}} = [2(1 - k)^{\frac{1}{2}} - k] / [2(1 - k)^{\frac{1}{2}} + k].$$

10493. (Professor BRILL, M.A.)—A top is apparently spinning steadily on a rough horizontal plane, the axis appearing to describe a cone of semi-vertical angle α about the vertical, with constant angular velocity Ω . Prove that, if the angular velocity of the top about its axis of figure be very slowly diminishing through friction and the resistance of the atmosphere, the angle of the cone will be increasing at the rate

$$kA\Omega^2 \sin \alpha (A\Omega^2 \cos \alpha + mga) / (A^2\Omega^4 - m^2g^2a^2),$$

where k is the ratio of decrease of the angular velocity about the axis of figure to its present value, A is the moment of inertia of the top about an axis through its centre of inertia perpendicular to its axis of figure, and a is the distance of the centre of inertia from the end of the peg.

ST. THOMAS'S HOSPITAL MEDICAL SCHOOL,

ALBERT EMBANKMENT, LONDON, S.E.

A SCHOOL OF THE UNIVERSITY OF LONDON.

ENTRANCE SCHOLARSHIPS in Natural Science are awarded at the beginning of each Winter Session. Subjects: Chemistry, Physics, and Biology.

The HOSPITAL contains more than 500 beds. The SCHOOL BUILDINGS comprise lecture theatres, laboratories, and class rooms, well adapted for the modern teaching of students in all the subjects of the medical curriculum.

An Athletic Ground, a Gymnasium, and Club Rooms are provided.

For the Prospectus, containing full particulars as to fees, course of study advised, &c., and for any information as to entering the Medical Profession, apply personally or by letter to Mr. RENDLE, Medical Secretary.

J. H. FISHER, M.B., B.S. Lond., *Dean*.

THE LONDON HOSPITAL MEDICAL COLLEGE. (UNIVERSITY OF LONDON.)

120th SESSION.

The Hospital is the largest general hospital in England, and contains 925 beds.

APPOINTMENTS.—Eighty qualified resident appointments are made annually. Dressers, Clinical and Post-mortem Clerks, and Maternity Assistants are appointed every three months. All appointments are free. Holders of resident appointments are also provided free board.

SCHOLARSHIPS AND PRIZES.—Entrance Scholarships, value £120, £60, £60, £35, £30, and £20, will be offered for competition at the end of September. Numerous Scholarships and Prizes are given annually.

FEES.—120 guineas in one payment, or 130 guineas by instalments. A reduction of 15 guineas is allowed to the sons of members of the profession.

The Students' Clubs Union, embracing all the Scientific, Social, and Athletic Clubs, is available to all Students. The Clubs Union Ground is at Highams Park.

SPECIAL CLASSES.

Special Classes are held in the subjects required for the PRELIMINARY SCIENTIFIC M.B. (London) EXAMINATION.

Botany and Zoology.—By G. P. Mudge, A.R.C.S. Lond., F.Z.S., and W. N. F. Woodland.

Chemistry and Physics.—By Hugh Candy, B.A., B.Sc. Lond., and O. W. Griffiths, B.Sc.

Fee for the whole Course, 10 guineas.

These Classes are not confined to Students of the Hospital.

Students who have recently passed the Matriculation or other Preliminary Examination can enter at once.

For further information apply, personally or by letter, to

Mile End, E. MUNRO SCOTT, *Warden*.

ST. MARY'S HOSPITAL MEDICAL SCHOOL,

PADDINGTON, W.

(UNIVERSITY OF LONDON.)

The SUMMER SESSION will begin on MONDAY, MAY 1st, 1905.

The HOSPITAL is close to Paddington Station (G.W.Ry.), Marylebone (G.C.Ry.), Edgware Road and Praed Street (Met. and Dist. Ry.), and Lancaster Gate (Cent. Lond. Elec. Ry.).

CLINICAL PRACTICE. All Dresserships and Clerkships (In-Patient and Out-Patient) are of four months' duration, so that each student serves as Surgical Dresser and Medical Clinical Clerk for a period of eight months, besides holding office in the various Special Departments.

The Resident Medical Officers (18 annually) are appointed by competitive examination; each appointment being of six months' duration.

ENLARGEMENT OF THE HOSPITAL. With the opening of the New Wing, now almost completed, the number of beds will be increased to 350, and two additional Operating Theatres, a Clinical Theatre, an enlarged X-Ray Department, and new Clinical Laboratories will be provided.

UNIVERSITY COURSES. The Medical School as one of the Schools of the University of London provides complete courses for its Medical and Surgical Degrees, under Recognized Teachers of the University.

SPECIAL TUITION is also provided for the Medical Examinations of the Universities of Oxford, Cambridge, and Durham, for the Primary and Final F.R.C.S., and for the D.P.H.

ENTRANCE SCHOLARSHIPS. Four Open Scholarships in Natural Science, value £145 to £52, 10s., and Two University Scholarships, value £63 each, will be competed for on September 25th, 26th, and 27th next.

For Medical School Calendar, giving full particulars, apply to the Dean, Dr. H. A. CALEY, or to Mr. B. E. MATTHEWS, School Secretary.

GUYS' HOSPITAL MEDICAL SCHOOL.

(UNIVERSITY OF LONDON.)

The SUMMER SESSION will begin on May 1st, 1905.

(Students who have recently passed the College of Preceptors' Examination are advised to enter forthwith to prepare for the Conjoint Examinations in July next.)

The Hospital contains 602 Beds, which are in constant occupation.

ENTRANCE SCHOLARSHIPS.—Five Scholarships will be competed for in September, 1905. Two in Arts of the value of £100 and £50, and three in Science of the value of £150, £60, and £50. Students who enter in May, if otherwise eligible, are able to compete.

APPOINTMENTS.—Hospital appointments are made strictly in accordance with the merits of the Candidates, and without extra payment.

DENTAL SCHOOL.—A recognized Dental School is attached to the Hospital, which affords to Students all the instruction required for a Licence in Dental Surgery.

PRIZES AND SCHOLARSHIPS are awarded to Students in their various years, amounting in the aggregate to more than £650.

RESIDENTIAL COLLEGE.—The Residential College accommodates about 50 Students in addition to the Resident Staff of the Hospital. It contains a large Dining Hall, Reading Room, Library, and Gymnasium for the use of the Students' Club.

For Prospectus, particulars of the Scholarships, and further information, apply to the Dean, Dr. H. L. EASON, Guy's Hospital, London Bridge, S.E.

WESTMINSTER HOSPITAL MEDICAL SCHOOL

(UNIVERSITY OF LONDON),

CAXTON STREET, S.W.

The SUMMER SESSION will begin on April 27th.

SCHOLARSHIPS IN ARTS AND SCIENCE, to the value of £270, will be offered for competition among Students entering then: the Examination taking place on April 13th and 14th.

The Hospital and School are close to Victoria, Charing Cross, and three Metropolitan District Railway stations; and are fully equipped for instruction in the whole of the Medical Curriculum.

For Prospectus and further particulars apply to the DEAN.

ROYAL COLLEGES OF PHYSICIANS AND SURGEONS OF EDINBURGH AND FACULTY OF PHYSICIANS AND SURGEONS OF GLASGOW.

The object of "SCHOOL" is to keep in touch with all developments of Education; to give its readers an interest in the questions which the recent change of system has inaugurated, and in the efforts made towards the solution of the problems of the day.

It is hoped that teachers, pupils, and the general public will find in its pages a stimulating record of progress, and useful and healthy practical assistance in the science of teaching.

Many leading educational experts have expressed their sympathy with "SCHOOL" and its objects, and special articles are being contributed from time to time by acknowledged leaders of thought in their own particular branches of Educational Science.

GEORGE G. HARRAP, 15 York St., Covent Garden, London.

TWO NEW LATIN BOOKS OF SPECIAL INTEREST AND IMPORTANCE.

BLACKIE'S LATIN COURSE

(Based on Conversation throughout)

By E. H. SCOTT, B.A., and FRANK JONES, B.A.

The most successful endeavour to apply modern methods to the teaching of Latin. The First Course has been adopted in the leading Preparatory Schools, Girls' High Schools, and in the Lower Forms of the great Public Schools. Its success has caused a Second Part on the same lines to be prepared. This Part is now issued.

The Second Course develops the methods of the First, modified to suit the different stage which the pupil has reached. It consists for the most part of exercises (*praeparatio, lectio, interrogatio, grammatica*) based on Caesar's First Book, and so arranged that the pupil is led gradually and systematically to acquire a mastery of the elementary syntax of the complex sentence. The oral methods begun in the First Course are continued. The original text of Caesar, and easy passages from other authors, are given, to be read after the preparatory exercises are worked through.

A special feature of this book is that all the long vowels are marked, including the "hidden quantities" in such words as *cōsul, iūnæ, quārtus*; thus introducing the quantitative system advocated by Professor Postgate in England, and Professors Hale and Buck in America.

In response to numerous suggestions from teachers, a number of illustrations are included in the First Part.

SOME OPINIONS OF THE FIRST LATIN COURSE.

The **SCHOOL WORLD** says:—"This is quite the best book hitherto published for beginners, and we venture to prophesy that this, or others written on the same principle, will supersede all existing manuals."

The **JOURNAL OF EDUCATION** says:—"We greatly prefer this Latin book for beginners to the comic Latin primer which was the last book of the kind we noticed. This bears on the face of it the marks of direct experience. The plan of the book is thoroughly sound, and it has been well carried out."

Prof. J. P. POSTGATE, in the **Classical Review**, says:—"It is clear and practical in its plan and arrangement, the sections (*capita*) seem to be of the right length and properly graduated in difficulty, the importance of pronunciation is recognized; in a word, it appears to be a very teachable book."

THE TEACHING OF LATIN

By **W. H. S. JONES, M.A.**,

Perse School, Cambridge.

This little book will be of special interest in view of the present critical position of classics in the Universities and Public Schools. It consists of four chapters: (1) The Teaching of Classics, (2) The First Year of Latin, (3) The Second Year of Latin, (4) The Third Year of Latin; and the author gives a suggestive scheme for a three years' course, founded on personal experience, and of proved success. Price 1s. [Ready immediately.]

The Educational Times.

WHATEVER may be the issue of the present *Greek* tussle over Greek—and those that know most of battles will be least confident in prediction—at all events the conduct of the contest affords significant hints of perils in the way of education. In other departments of national activity, indeed, we are very familiar with similar perils, and we suffer from them disastrously enough; but such experiences might be expected to induce some special forethought to safeguard the educational system, which has at last been recognized to be of peculiar importance for the future of the country. One cannot, however, but feel that the taint is in the blood, and that, as usual, the difficulty will have to be "worried through." Dr. Gow tells the official Army educationists that they know nothing about it; Prof. Armstrong brings down his sledge-hammer on the paynim; and an "up-to-date" journal in a region that bears a proverbial reputation for shrewdness tells the world that the opinion of the Head Masters is not of the slightest consequence. Men that have been trained in classics with little tincture of science cannot conceive of culture without Greek; men that have been trained in science with little tincture of classics would shovel Greek to the scrap-heap. Do not both parties alike misconceive not only the immediate question but also the far more important general question underlying it? And, if so, is there not danger in the counsels of both, except in so far as they prompt inquiry? A comprehensive view seems to be strangely rare.

The value of Greek, whether as discipline or as literature, is in no way involved in the present question. Though dragged into the controversy on both sides—on the one hand to support the particular case, or on the other hand to discredit the subject generally, or on both hands through honest logical oversight—the general importance of Greek is wholly irrelevant; and, it may be added, is no more assailable than the importance of Sanskrit or of the calculus. Whatever the issue of the conflict, Greek study—anything that can be properly dignified by the name—will certainly re-

main undiminished. But all that is aside from the question whether some meagre knowledge of the elements of Greek should continue to be required from a small number of lads of mathematical and scientific bent on the plea of all-round training. Now, there is no disagreement on the desirability of an all-round training before specialization; the only question is what this training shall consist in. Plainly a selection of materials must be made. And, supposing—on assumption of the worst—that Greek were dropped, would the training prove a failure? The experience of other countries—Germany, France, America, wherever there has been experience—appears to indicate that it would not. Misgivings there have been, just as there are misgivings here; but they have steadily been cleared away, we believe, by actual experience—a very familiar result in many other departments of life. But, we are told, this consequence would also follow: that presently Greek would be extinguished in all but a few public schools. Who in his senses could believe any such thing so long as there are boys with a faculty for language and literature, and the great universities are constantly offering golden gifts for classical attainments and promise? How can the Master of Emmanuel, for example, survey the classical prizes in his own university and agree with those that forecast "the practical extinction of the study of Greek" in the public schools? On the contrary, if the recalcitrant Grecians were disbanded, would the willing remainder not make more conspicuous progress? Whatever loss there might be would befall the students that dropped Greek.

Apart from experience elsewhere, would the non-Greek boy really suffer any appreciable loss? His time would be filled up somehow. If by a modern language, surely the discipline would go a considerable way to make amends for the absence of Greek accidence; and it is puzzling to understand how it comes about that classicists so stubbornly refuse to acknowledge the patent efficiency, say of French, both for discipline and for culture. Is it, indeed, a "soft option" to substitute translation and composition in French for translation and composition in Greek? Let those that have tried it and had their exercises competently examined make answer. The mere accidence, no doubt, shows French at a disadvantage; but beyond the accidence there are com-

pensations. Besides, consider Dr. Gow's remarkable—and, from one point of view, irrefragable—argument for the “scientific” character of the exercise in Latin. May it not tell heavily against Greek? If a boy has gone through the Latin discipline, may it not be asked why he should duplicate it? Having obtained it, how much does he lose by substituting French for Greek? The extent of grip of Greek is not to be exaggerated. It is not the first-class man's Greek that is in question: it is the boy's Greek—the unwilling boy's Greek; and nobody has ventured to assess it at a high figure. Altogether, like some mathematical oddments, the loss—to the boy of pronounced scientific bent—may be set down as less than any assignable quantity and equal to nought.

At the same time no one that appreciates Greek can regard its exclusion without regret, especially with the conviction that the menace has been brought upon it by its friends. Perverse methods, cherished by the University system, have gratuitously brought it to this pass; and recent efforts at reform, like the reforms of the years preceding the French Revolution, may possibly have come too late. New subjects have been crushing forward, and cannot find room except by the extrusion of subjects in possession. If some of these are “bread-and-butter” subjects, they are none the less instruments of culture; and, even if they be inferior instruments, their practical usefulness is a quality not to be ignored. Not every boy will be able to make a living wage on “culture”; and it by no means follows that “the keeping of our souls alive” is dependent on Dr. Rouse's cult of “the useless.” One would have more hope in frankly large views—such as the national outlook insisted on by Prof. Sadler—an unprejudiced recognition of the potentialities of all subjects, and no taboos on any route of study. The opening of the university doors to modern studies, so far, has been the entertaining of angels unawares; and the doors may advantageously be opened wider. The standpoint of the boy, too, needs to be more patiently regarded. There is much wisdom, it seems to us, in the words of Mr. A. C. Benson (*Times*, January 21): “It is not from the point of view of an anti-classicist that I desire that Greek should be made optional, but that the university should give a lead to the public schools in the direction of possible simplification, and thus promote the interests of the large majority of average boys at the schools without excluding them from her precincts; for it is my honest belief that, between antiquated methods and multiplicity of subjects, the average boy's educational prospects are—I will not say deliberately, but timidly—neglected and sacrificed at many secondary schools.” And it is only the average boy's own subjects that will bring him “culture” or raise him above the average. We would keep Greek if by reformed method and discipline it can yet be kept; but even Greek cannot be allowed to “sacrifice” the average boy when alternatives are known to be able to save him and make the best of him.

In the *Empire Review* for January, Mr. H. A. Roberts presents an interesting discussion of the question of “The Employment of the Graduate.”

NOTES.

ONE cannot but admire the boldness and dexterity of Dr. Gow when the irony of fate placed him in the chair at the conference of Public-School Science Masters. His claim that Latin is practically the best introduction to scientific method was set forth in remorseless detail, with complete lucidity, and, from his own point of view, with cogent force. Still, it could not but be patent that the material to which the method is applied makes a profound difference for scholastic purposes. Boys that remain stupid and listless in face of declensions and conjugations kindle into intelligence and alertness before a Bunsen burner or the leg of a frog. By his emphatic pronouncement in favour of natural science, however, Dr. Gow showed himself broad-minded as well as conciliatory. But the time difficulty still presses; and, if the method of teaching Greek is held to be as perfect as Dr. Gow holds the teaching of Latin to be, then the difficulty will inevitably be solved by the strain.

MR. WILLIAM BOUSFIELD, Master of the Clothworkers' Company and Chairman of the Girls' Public Day Schools Company, writes to the *Times* (December 29) to drive home the significance of the fact that Trinity College, Dublin, on December 20, conferred the degree of M.A. on nineteen women and the degree of B.A. on twenty women, who “were not *alumni* [*? alumnae*] of the college, but were students of women's colleges at Oxford and Cambridge.” The Clothworkers, who certainly “have done their share in aiding many forms of education, and the wide range of whose sympathies and the practical labour which they have as business men expended in the study of administrative methods give their opinion some weight in this matter,” have generously, as we have already intimated, paid these lady graduates' fees, and will continue to pay for others during the next two years, while the Dublin offer remains open. Oxford and Cambridge can hardly afford to remain quiescent in the face of this thoroughly well deserved rebuke: they may be expected promptly to set about devising some method of removing the difficulty and “determining the form which the change shall take and the share to be allotted to women in university counsels.” Meanwhile their isolation in this respect is by no means splendid.

THE Bishop of Elphin strongly seconds Mr. John Redmond's declaration that the university question in Ireland is not a Bishop's question, nor an aristocratic question, but pre-eminently a poor man's question. There need be no doubt that there is a substantial amount of truth in this view. At the same time there are evidences that many on the Catholic side are of opinion that “the policy of mere negation is no longer tenable.” It is pointed out that even a Maynooth professor has expressed doubts whether the benefits of such a university as Mr. Dillon advocates would “be sufficient to justify the Roman Catholics in refusing to make terms with the institutions already in existence”—that is to say, a “National” university, open to all religious denominations and relying for a Catholic “atmosphere” on

a numerical majority of Catholic students. Again, it appears that within the past two years fifty Catholic students have entered University College; while Trinity College has made a notable advance in offering the Roman Catholics a Divinity School of their own, with chapel and Catholic dean, within the College—a concession regarded by zealous Protestants with disfavour. Why not enter Trinity in hundreds instead of tens, and create there the desired numerical “atmosphere”? Would that lead to demonstrations, as at Innsbruck? Or is it preferable to continue to “pummel the Government”?

DR. R. D. ROBERTS, the Secretary to the Gilchrist Trustees, gives a most interesting sketch of the life of Dr. Gilchrist, of the nature of the Trust, and of the methods adopted by the Trustees, in the November issue of *University Extension*. He writes:

The name of the Gilchrist Lectures is a name to conjure with in the great centres of industry throughout the country. For over forty years the Gilchrist Lectures have drawn large audiences of artisans wherever they have been given. The most capacious available hall is secured in every place where the lectures are arranged; and, as a rule, the hall, however large, is crowded on the lecture nights. Since 1865, when the Trustees first established the lectures, about two and a-half million persons have attended the lectures, mostly of the artisan and wage-earning classes. During that period the Trustees have spent about £25,000 in carrying on these lectures. It is to the Gilchrist Trustees that the credit belongs of having started a movement for bringing larger opportunities of higher education within the reach of the working classes, and no organization has approached the success achieved by the Trustees within the limits they imposed upon their operations.

With this may be considered the work of another great educational trust, the Dick Bequest, whose latest report, covering the past fifteen years, by Prof. Laurie, has just been published. There is not a head master in an elementary school in the three north-eastern counties of Scotland participating in the Bequest that is not a university graduate.

IN the December number of *Education* (Boston), Prof. Elizabeth H. Avery, of Redfield College, South Dakota, offers “The Historical Solution of a Literary Problem”—the contrast in moral tone between the writings of the Italian Renaissance and the Shakespearean drama. She rejects Taine’s explanation by physical geography: “it was not that Italian skies do not favour stern control, so that southern peoples are naturally licentious and northern peoples chaste.” “It was rather,” she argues, “that in each case all previous history had prepared the way for results as we find them. England was, moreover, the meeting place of the sense of beauty and fitness born of the Italian Renaissance and the moral earnestness born of successive Teutonic reformations.” If the argument is not quite new to us, it is at any rate set forth pointedly and effectively.

THE American Rhodes Scholars’ views of their experiences at Oxford are presented by an Oxford correspondent in the *New York Tribune*. “Every one speaks well of them,” he says, “and there is no prejudice against them.” Well, that is just what ought to have been expected. “They are happy in their new life, frank in their recognition of what is useful and beneficial to them here, and not disposed to be critical or to look a gift horse in the mouth.” What is it that has made the deepest impression upon them?—

“It is the social life within the colleges and in the University town”—“what may be called the family life of the colleges, and the democratic spirit of the place.” What is most distasteful to them?—“The traditional discipline of the colleges.” This is not surprising, for the average age of the forty-three scholars is twenty-two; some of them have been teachers, and at least one of them has been a college lecturer. Still, “there is no evidence that they are seriously irritated or annoyed.” They look at the humorous side of the situation, and they have a native faculty of accommodation to environment.

It is the Oxford way to condense the arduous work of a year into three short terms of eight weeks each, and while the lectures are in progress to have neither recitation nor review, but to teach systematically and to coach incessantly, and to straighten out all the difficult passages and the most complex problems, leaving the student free to regain his breath and to read by himself during the holidays. This is a feature of the English system which impresses the American Rhodes Scholars. They tell me frankly that after being educated in the American way they are now being re-educated in “the English way. A neater way of putting it would be that they are combining the energy and variety of one system with the thoroughness and precision of the other.

A little experience will no doubt rub down the rough edges on both sides.

ADDRESSING a recent meeting of the Aberdeen Branch of the Educational Institute of Scotland, Dr. W. Leslie Mackenzie, of the Local Government Board, Edinburgh, enforced strongly the necessity for a regular medical examination of school children. There is one solid fact, he said, that makes short work of difficulties (such as trouble to the teachers and expense to the Boards), namely, that there are in Scotland at this moment 800,000 school-children, and, from all the positive information we have, percentages varying from 10 or thereby to 79 or thereby according to locality, are suffering from some ailment or defect that in some degree or another unfits them for school work, and damages their progress in the long race for life and a living. This is a very serious representation, undoubtedly. Is the state of matters any better in England?—a much wider question, and similarly important and insistent. Dr. Mackenzie pointed to the advances that have been made in medical inspection of schools in Germany, Switzerland, and Austria-Hungary—Nuremberg, for example, has fifteen school doctors. Among ourselves some halting steps have been taken, especially in the matter of eyesight; but no less important and urgent are throat and ear, and heart, and general as well as special conditions.

AT the annual Christmas Tree Festival at the Royal Normal College for the Blind, the energetic Principal, Dr. F. J. Campbell, challenged the world to find a happier family than his own, in spite of their affliction. Such a challenge speaks volumes for the administration, and should attract a generous reply to his plea for an increase of funds. Another strong argument in favour of a larger expenditure on the education of the blind is the astonishing fact that so many as 89 per cent. of the pupils that leave the College are able to earn their own livings. Surely Dr. Campbell will not have difficulty in finding three thousand subscribers of one guinea a year for five years to pay off the mortgage on the buildings.

SUMMARY OF THE MONTH.

IMPORTANT EDUCATIONAL CONFERENCES.

THE ASSOCIATION OF HEAD MASTERS.

THE annual general meeting of the Incorporated Association of Head Masters was held at the Guildhall, London, on January 11 and 12, under the presidency of the Rev. James Went, M.A., Head Master of Wyggeston School, Leicester. Mr. Went spoke strongly of the backwardness of secondary education, tracing it to various causes, and hoping for good results under the Act of 1902. He looked with interest on the experiment of educating pupil-teachers in secondary schools; but he thought that, as a matter of principle, it was obvious that the cost of training should be defrayed by the national Exchequer, although it was hopeless to ask increased grants from the now depleted Treasury. There might be a social difficulty with a certain number of parents; but the idea that because a boy's parents were in relatively poor circumstances that boy was not fit to associate with sons of successful manufacturers was one which he found it difficult to describe in terms of due moderation. Speaking of the new Regulations for Secondary Schools, he said that the most striking fact about them was that they had been received with so much calm approval. This was highly satisfactory. But he believed that the calmness was partly due to the fact that they had not yet got over the shock caused by their sudden publication. The Regulations would come before the conference, and he proposed to mention only two points. The scale of grants suggested that, given an equal number of boys in each of the four years, the amount *per caput* would be £3. 10s. Few schools would be able to claim on any considerable number in the fourth year, and the average grant would not, he thought, much exceed £3. The loss to all schools of the A type, which had been earning an average of about £5, would, of course, be very serious. The other point referred to the question of examinations. By Clause 9, schools in the first or second year might not, except by express permission of the Board, sit for any external examination, except one which comprised the whole school, or one held solely for the award of scholarships. It was not easy to see the reason for this restriction. Many of them found the Local Examinations, Preliminary, Junior and Senior, an effective way of maintaining a standard. They were a stimulus to the boys, and they were not without a wholesome effect even on the masters. They had received an authoritative assurance that, when the University Local Examinations were utilized for the school examination, the conditions of the clause would be fulfilled. In many schools this would remove the objections felt to this clause. There were other schools, however, which would suffer serious inconvenience, and, having regard not only to these schools, but to the general convenience and comfort of working, it was unfortunate that the Board had not felt able to leave a detail of this kind to the discretion of the head master. This point at once raised the question of the inspection and examination of schools. It was a question which would have to be considered in the near future, on the ground of expense as well as of educational efficiency. He believed, as the result of a good deal of experience of various methods, that a combination of the University Local Examinations, or of the examinations of the Joint Board, with an inspection of the whole school by a qualified man sent down by the universities, and an oral examination, when necessary, of the younger boys, would be found to be the best, not only as regarded convenience and efficiency, but also as regarded economy.

The following resolution, proposed by Dr. W. H. D. Rouse (Perse School, Cambridge) and seconded by the Rev. R. D. Swallow (Chigwell), was passed after considerable discussion:—

That this Association regards the new Regulations for Secondary Schools with satisfaction in general, but regrets that the Board of Education does not provide—(1) for the calculation of grants upon terminal attendance; (2) for the recognition of advanced courses to follow upon the existing four-year course; (3) for ensuring comparative freedom of curricula to schools satisfying certain tests of a higher liberal education.

A rider, moved by Mr. T. Varley (Winchester), was adopted in these terms:

But that this Association does not consider that the financial basis on which grants are calculated is at all adequate, and earnestly protests against any application of the Regulations to secondary schools hitherto earning grants from the Board, and recognized as doing good educational work, which would result in such schools receiving grants on a lower basis than in the past, and particularly in the case of schools which have,

with the sanction of the Board, incurred substantial capital expenditure in the matter of buildings or equipment to enable them to qualify for such grants.

And, on the proposal of Mr. R. W. Hinton (West Hampstead), it was agreed to add to the resolution this clause:

And (4) that the Board of Education does not provide for an elastic percentage division of the whole school time when prescribing for groups of subjects, in place of the existing rigid *minima* of hours or periods in each week.

On the question of School (Leaving) Certificates the following resolutions were passed:—

(1) That this Association desires (a) that all university authorities in England should co-operate in establishing a general system of school certificates, and (b) that the Board of Education should appoint a Board of Control for the purpose of correlating the proposals of such authorities. (2) That there should be a division of successful candidates into a first and a second class, and that marks of distinction should be given in the several subjects to such pupils as are worthy of special notice. (3) That periodical inspection of a school should form a condition of the grant of certificates to its pupils, and that the report of such inspection should be taken into consideration by the examiners for these certificates. (4) That the Association deprecates the division of the work between, and the system of dual marking by, external and internal examiners; provided always that the examining body takes sufficient measures to recognize the curriculum of the school examined and to set papers suitable thereto.

On the motion of Canon Bell the recommendations of the conference on the tenure of assistant masters in public secondary schools under Board of Education schemes or other special instruments of like effect were adopted. Among other things this conference recommended that a salaries scheme should, with the approval of the governing body, be established for each school, to include (a) provision for annual or other periodic increases of assistant masters' salaries, such increases to be automatic, but each rise to require the assent in writing of the head master; (b) power for the head master to recommend increased salaries, a note being added to the effect that it was considered highly desirable that the commencing salary paid in a public secondary school to any master registered in Column B should be not less than £150 per annum, non-resident. It was further recommended that provision should be made for pensions for assistant masters, and a form of agreement was submitted. The Council were also instructed to consider what further action could be taken.

Resolutions were also adopted with reference to the federation of educational associations, approving the draft charter of the proposed College.

The main feature of the second day's proceedings was the discussion of the question of Greek on a motion by Mr. Swallow, who reviewed the recent history of the question and declared that the adoption of the report of the Cambridge Syndicate would presently extinguish Greek in all but a few public schools, and soon render it as much a luxury of the few as Hebrew is to-day. He thought they must leave it to schoolmasters, influenced by leaving certificates, to secure what was, to his mind, so essential in the readjustment of studies and examinations—that while, on the one hand, candidates for a degree in Mathematics and in Science must receive their share of humanistic training, whether under the form of modern or ancient languages, candidates, on the other hand, for a degree in Arts should not be left without training in mathematics and natural science. The following resolutions were carried, four or five amendments having been put to the meeting and lost:—

(1) That, in the opinion of this Association, it is desirable that the universities should institute a twofold Entrance Examination—(a) for candidates proceeding to degrees in Arts, in general as at present, but with a higher standard in literary subjects; (b) for candidates proceeding to degrees in Mathematics and Science with a modern language—including translation by sight, composition, and an oral test—as an alternative for Greek. (2) That the provision for papers in English and History, and for the omission of Paley's "Evidences" from the Cambridge Previous Examination as laid down in the first report of the Cambridge Studies Syndicate, should be insisted upon in examinations under both (a) and (b) above. (3) That a new degree in Mathematics and in Science should be instituted, differing in title from the degree in Arts, but of precisely the same university standing.

After some discussion, resolutions on the education of intending pupil-teachers were adopted as follows:—

(1) That this Association cordially approves of the proposal of the Board of Education that candidates for pupil-teacherships in public elementary schools should receive a substantial portion of their education

in a public secondary school. (2) That this Association further considers it desirable that as many recruits as possible for pupil-teacherships in public elementary schools should be obtained from the ranks of ordinary pupils of endowed secondary schools. (3) That, in order to effect the latter purpose, the salaries of assistant teachers in elementary schools should be considerably increased.

A discussion on "The Teaching of Geometry," opened by Mr. Montague Jones, concluded the proceedings.

THE PUBLIC SCHOOLS SCIENCE MASTERS.

THE Public Schools Science Masters' Association held their Annual Meeting and Conference in Westminster School on January 14, Dr. Gow in the chair, in the absence of the President, Sir Michael Foster, through illness. Dr. Gow said that, in the nature of things, there was no absurdity in a classical teacher's presiding over an assembly of science teachers, since the earlier stages of classics, as now taught, were designed to be an introduction to scientific method, and were, in his opinion, the best foundation for work in natural science. Consider for a moment what was the real function of the elementary classes in Latin. A boy began by learning certain typical forms in declension and conjugation. It was true that he did not make those typical forms for himself, but neither did he in any other inductive science. There was not time enough for that, and he assumed, in grammar, as elsewhere, the generalizations made by the labour of many ages of men. Given the typical forms, he was next put through an elaborate course of parsing, which was merely scientific classification. When a boy described *amabo* as "first person singular, future indicative active, first conjugation," he assigned to that one word no less than six characteristics arranged in a scientific, logical order from species to genus. The process was precisely the same as that which was required of the student of zoology or botany or conchology, with this advantage, that in language the process can more easily be reversed, and the learner required, when certain characteristics were given, to name a word which contained them all. After practice of this kind in one genus at a time, the boy proceeded to translate short sentences from Latin into English and from English into Latin. He thus learned, little by little, that certain genera and species might or must occur in combination and certain others not. Gradually he came to a Latin book, and what, for practical purposes, was a Latin book in the first instance? It was a huge collection of words of all genera and species grouped together in every conceivable way, and at first sight utterly confusing. The boy was required, then, first to parse every word as it stood, and then to look for the necessary constituents of groups and to add to them the other possible constituents, and so gradually to arrive by instalments at the mind of the creator of that book. So far, this was a purely scientific process; and not only did it lie within the compass of any boy of average intelligence, but also it was by far the most convenient introduction to science, for the specimens were practically unlimited. They were not destroyed by the process of analysis, and, if all the boys in a class had the same book, then all of them had the same specimens arranged in the same order without any trouble and with a *minimum* of cost. He might add here that for the present purpose French and German and English were inferior to Latin and Greek, simply because in the former the genera and species were not distinguished by such clear marks and the groups were not of anything like the same complexity. They neither stimulated nor taxed a boy's mind to the same degree. This scientific process had been brought, in the teaching of Latin, to such a degree of perfection that its very perfection was likely to be its undoing. There were some persons, including, he was sorry to say, many classical scholars, who, bitten by the prevailing craze for utility and immediate results, thought that Latin was learnt in the first instance for the purpose of reading Latin books, and wanted to get at the books quicker, without so much preliminary training. He wished to protest against that suggestion. If it were carried out, it would deprive education of its best instrument, the most handy and rapid and versatile machine of them all. He had no objection to a more summary treatment of any other language if Latin had been well taught first, but elementary Latin contained the concentrated wisdom of many ages of teachers, and it would be foolish to alter it materially. It was true that they taught in Latin grammar some genera and species that did not often occur in literature; but to the man of science the exception was quite as interesting as the rule, the rarity as the common form, and our ancestors added these things to the Latin grammar because they would have no

slovenliness in what they regarded as the basis of all education, the best introduction to every study. If comparisons were required, he could point to many by-ways of natural science that to the vulgar would seem as ridiculous as any nicety of Latin grammar. The scientific treatment of Latin grammar required that the exceptions should not be ignored, and it seemed to him of the highest importance that children should be taught from their earliest years to do their work perfectly without haste and without scamping of details. For that purpose the *minutiae* of Latin grammar were as important as the weightier matters. It was not an alteration of method that was wanted, but a clearer theory of education and a closer watching of boys. The scientific study of Latin passed gradually into the artistic, and many boys who were good at the first were not good at the second, which required some special faculties. The schoolmaster should at this stage be on the look-out to prevent waste and injustice, to discern the boy who had a call to literature from the boy who had a call to science, and to transfer the latter to the *pabulum* on which he could thrive. In the controversy that was now raging at the universities he was an advocate, not of the exclusion of Greek, but of the inclusion of natural science. He should not say anything about Greek, because his reasons for wishing to retain it were, in the main, temporary and might be removed if some other reforms were introduced at the same time. But his wish to add natural science was permanent. He thought that a boy should have it impressed on his mind that literature and art and politics and philosophy were not the whole of the humanities, as they were usually said to be, and that he should be given at least a glimpse of the vast field of human labour which a classical education left unexplored. Not all boys, of course, would profit by it, any more than all science men profited by a glimpse of Greek, but the best of them, the most thoughtful and the most modest, would always be grateful for it.

There was a brisk discussion on "The Importance of including both Latin and Natural Science in a scheme of General Education," a paper by Mr. Douglas Berridge (Malvern); and other papers read were "Recent Proposals for School-Leaving Certificates," by Mr. C. I. Gardiner (Cheltenham); "The Use and Misuse of Terms in Science Teaching," by Mr. T. L. Humberstone (Toynbee Hall); and "The Possibility of Teaching 'Scientific Method' to Boys whose Education is almost entirely Literary and who have no time for a regular Course in Chemistry and Physics," by Mr. F. B. Stead (Clifton).

THE CLASSICAL ASSOCIATION.

THE Classical Association of England and Wales held a brilliant *conversazione* at University College, London (January 6). Two short lectures were delivered, by Prof. Percy Gardner and by Dr. Gilbert Murray. Prof. Gardner explained and illustrated the advantages of "The Use of Lantern Slides in Classical Teaching." Incidentally, he said he was inclined to think that, while training in Latin grammar was a splendid discipline, Greek might well, in most cases, be studied with less exactness, haste being made to introduce pupils to the literature. Dr. Murray spoke on "Some Points in teaching Greek Plays." The main thing was to realize in a play the inner motives of the actors, and to remember that the words were spoken and not written to be read, and that they needed to be immediately intelligible. The teacher should read and re-read his play with this in his mind, and not treat it mainly from the analytic point of view in the matter of language. There had been a vast improvement in this respect during the last twenty-five years.

The general meeting of the Classical Association was continued and concluded on January 7. After some discussion of the very old question of the pronunciation of Latin, and a couple of papers on the very obvious utility of Latin and Greek as instruments of mental discipline, the Lord Chancellor, who has succeeded the Master of the Rolls as President, delivered an address, advocating wider reading for the attainment of facility and enjoyment, technical accuracy being acquired gradually: we quote the main points in another column. A motion by Prof. Ernest Gardner was carried: "That the Council be requested to nominate a representative Committee to consider by what methods those employed in classical teaching can be helped to keep in touch with the most recent results of discovery and investigation." Mr. T. E. Page read a humorous paper on the concentration of classical work in schools on what is essential. The Rev. W. C. Compton wished to see a simplification of school grammars by separation of the indispensable from the more exceptional forms; and Prof. Postgate wanted a new Latin

dictionary to replace Lewis and Short—"one of our greatest needs."

THE MODERN LANGUAGE ASSOCIATION.

THE Modern Language Association held their annual general meeting at Manchester on January 12 and 13, Prof. M. E. Sadler, President, in the chair. In his presidential address, Prof. Sadler said that in the educational movement which was now stirring the mind of England certain conclusions seemed to be receiving almost general assent—first, there was need for more of the humanities in our national education, need for more training of the imagination and the sympathies through the study of literature, history, and art, and need for more development of the power of expression in the mother tongue; secondly, that there was special need for the closer adjustment of the courses of study in our secondary schools for boys to the real requirements of those who were destined for important positions in business and administrative life; thirdly, that it was becoming necessary to decide more definitely what should be the relation of the central authority of the State to the work of national education, and especially to the work of the secondary and higher schools; fourthly, that it was essential to secure for our schools, and especially for our secondary day schools, a sufficient and steady supply of highly competent and liberally educated teachers, and to retain their services by adequate salaries and suitable conditions of work. It was on the personality, the intellectual and moral power, the gifts and experience of the teacher, not on the mere provision of buildings or on the planning of courses of study, though both of these were important, that the real vitality and welfare of a national system of education depended. Did not the humanities in their deeper sense mean a study of man and of his environment, the physical conditions which affected his life, the language in which he expressed his thought, the relationship between nations and between races, the influence of past generations on the present, the economic factors which determined his wealth or poverty, the institutions which had been the backbone of his corporate life, his philosophy, and his ideals? Did we not really mean by the humanities that whole group of studies which threw light upon man in his relation both to other men and to the world in which he lived? From this point of view there was no ultimate conflict between the humanities and physical science. Both aspects of study were indispensable to any real knowledge of the conditions of human life. What was really at issue was, partly, the amount of time which it was expedient to assign in a course of general education to each of the two disciplines, and, chiefly and fundamentally, the relative importance which should be attached to the material and to the moral or intellectual factors respectively in the explanation of the course of human development. But were not these questions such that it was wise to allow for great and necessary divergence of opinion? Nor, again, was it just to maintain a sharp antithesis between the classical humanities and the modern. Both in their seasons were necessary elements in a course of humane education. Imperial organization was not a modern question only, and Plato had a message as well as Hegel or Herbert Spencer. The points really at issue were, partly, the choice of a particular linguistic instrument for the training of the mind, and, partly, though not to any great extent, a certain difference of view as to the relative claim upon school time of the study of man in the past and the study of man in more recent days and in the present. But were not these, again, points in regard to which it was prudent to allow wide latitude to those engaged in education and upon which any ruling was impossible? The humanities had, however, become sterile in education unless they were informed by a purpose. Was not their purpose in training, apart from their virtue in intellectual discipline and in the carrying forward of great traditions of thought and feeling, to inspire a desire for the betterment of human life? This led him to a thought which seemed to be gradually taking more definite form in our educational discussions. Was it not expedient that the work and studies of our schools should be more consciously inspired by national feeling and by more definite national aims? Was it not true that we might find more motive power, applicable alike to many different types of schools? Our national unity was based upon admitted diversity of conviction, and a national system of education must correspond to and reflect the essential qualities of national life. Instead of endeavouring by a fixed and uniform system of education to make perfect the same, should we not rather give free scope to everything that made for variety and to sincerity of personal conviction and of aim?

A resolution welcoming the report of the Cambridge Examination and Studies Syndicate, and pledging the meeting to make every effort to further the carrying of the report, was adopted; and some good papers were read.

The second day opened with an excellent paper on "The Teaching of French Literature in English Schools," by M. Barlet (Mercers' School), who claimed more time for the subject, and emphasized the distinction between instruction and education. Mr. M. P. Andrews (Bolton) dealt with "Some Considerations of Time in Modern Language Teaching"; he thought ten was the earliest age for beginning—perhaps eleven might be better. Mr. J. W. Headlam, Staff Inspector of Secondary Schools for the Board of Education, spoke energetically on the neglect of English in English schools, and the Rev. H. J. Chaytor (Crosby) contended that French was the best language for philological training.

THE ASSOCIATION OF ASSISTANT MASTERS.

THE annual general meeting of the Incorporated Association of Assistant Masters in Secondary Schools was held at Mercers' School, Holborn, on January 4. Mr. G. E. S. Coxhead (Liverpool Institute), President, said the Act of 1902 gave the secondary schools an opportunity of getting back again into the stream of national feeling and progress. That Association could help to co-ordinate the three grades of education, and, at the same time, they could also help to promote a clearer realization among all sections of teachers that they were members of a common profession. Mr. G. F. Daniell, the retiring Chairman, presented the Council's report for 1904, which stated that the number of members of the Association had risen from 1,652 to 1,748. If they still had to wait for the satisfaction of their just claims to better security of tenure, higher pay, and pensions, the fault did not lie at the door of the head masters. In a fairly recent scheme of the Board of Education for one of the greatest public schools in England there was a proviso that all the 32 house masters should, with six possible exceptions, "be bachelors or live as such." In many schools marriage was practically inhibited by the smallness of the salaries paid. He believed it possible to have a great organization of higher education (including secondary) without destroying the individuality of the teacher or of the school. But there was a grave danger of petty and injudicious interference with the details of school management. With regard to the regulations for secondary-school buildings and for the training of pupil-teachers, he feared that when the available rates and other sources of income had been drawn upon there would be no money properly to remunerate a good teaching staff. He welcomed the intrusion of the Local Authorities. After some preliminary, and probably costly, mistakes we should find a greatly improved state of affairs in higher education. The following resolution was agreed to:—

That, in the opinion of this Association, any endowed school for which the Local Education Authority—acting through an Education Committee constituted in accordance with the provisions of the Education Act of 1902—provides, or is prepared to provide, a large proportion of the money required for the maintenance of the school, should be controlled in the manner which appears most desirable to the Local Education Authority; and, further, that the Board of Education should not oppose, in such a case, the abolition of the existing governing body, if the Local Education Authority is in favour of such abolition—provided that both on the Local Authority and on the committee of managers of the school there is adequate representation of secondary and university education.

A number of other resolutions were adopted, recommending increase of salaries and the advertising of vacancies in the public Press, criticizing the new regulations in regard to the average grant and the omission to recognize the official Register of Teachers, urging the claim of the Association to direct representation on the Teachers' Registration Council, and approving of the proposed formation of a federation of associations of secondary teachers. In a racy paper entitled "A Plea for the Useless," Dr. Rouse (Cambridge) said the great problem of to-day was, not how to keep our trade, but how to keep our souls alive; if any person with a living soul needed compulsion to learn Greek, there must be something wrong with the way he was taught. A motion "that this meeting welcomes the report of the Cambridge University Syndicate on Studies and Examinations, especially that candidates should be permitted to take one or two modern languages in place of a classical language," was carried, after discussion, by 49 votes to 13. The final discussion had for subject "The Teaching of English."

THE ASSOCIATION OF ASSISTANT MISTRESSES.

THE twenty-first annual meeting of the Incorporated Association of Assistant Mistresses in Public Secondary Schools was held on January 14, at University Hall, Gordon Square, W.C., Miss Laurie, President, in the chair. Miss Laurie said that the number of members was now over eight hundred, an increase of over a hundred in the last year. She also reported an increase in special donations. The Association had taken definite action with regard to the representation of women on the London Education Committee and on the Scotch Education Board. A memorial on the regulations for secondary schools had been sent to the Board of Education, urging that the total of seventeen hours required by the Board for the course of study prescribed in order that the grant may be duly obtained would tend seriously to diminish the freedom that now exists in secondary schools for girls not at present in receipt of Government grants. On school certificates the Association had expressed general agreement with the scheme of the Board of Education. The salary scheme was the outcome of discussion at five Committee meetings. As to the organization of secondary education in this country, she pointed out that, although a determined effort was being made, the difficulties were great, because the nation dreaded organization almost as much as it dreaded ideas.

After much discussion of the salaries question, it was agreed that the *minimum* initial salary during a probationary year for a mistress with a University degree, or its equivalent, and training should be £120 a year, and that for others the *minimum* should be £100. It was also agreed that the *minimum* rate of augmentation should be £10 a year for the first two years, and afterwards £5 a year until a *minimum maximum* of £150 for non-graduates or of £200 for graduates was reached. The Committee had proposed that further increase should be a matter of arrangement with the governing bodies from time to time, so that senior mistresses of special qualification should receive £180 to £200 a year. An amendment substituting the words "£300 or more" as the proposed *maximum* was carried.—On the question of school certificates, it was resolved "that it is not desirable that examinations for such certificates should be conducted by a single central organization"; and several motions on points of detail were adopted.

ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.

THE annual report of the Association of University Women Teachers shows an increase alike in membership and in work accomplished. The number of applications for teachers received and the number of appointments made were both in excess of the numbers last year—403 applications as against 298, and 242 appointments as against 185. There has been a marked increase in the applications received for posts of greater importance and responsibility. The past year has been in many ways a prosperous one for well qualified teachers, owing, in large measure, to the opening of so many new secondary schools by the Education Authorities of the counties and county boroughs. In this connexion it is noteworthy that a considerable number of applications for teachers has come from the directors of education in various country districts, and that, in some cases, this direct application has been the means of raising the scale of salaries originally contemplated. Miss Clough, Vice-Principal of Newnham College, Cambridge, has been elected President of the Association for the current year.

THE NORTH OF ENGLAND CONFERENCE.

THE third annual meeting of the North of England Education Conference was held in Liverpool on January 6 and 7, Lord Stanley of Alderley presiding over an attendance of some 2,200 members. Papers were read on Scotch, Welsh, and English "leaving certificates"—the last, by the Rev. J. B. Lancelot, Principal of Liverpool College, being a vigorous and scathing denunciation of the system proposed for secondary schools. In the course of the discussion Sir Oliver Lodge said the use, and not the abuse, of examinations is admitted by all as an adjunct to teaching, but the point is to determine the relation between teachers and examiners and between teachers and inspectors. People are no longer going to be satisfied with purely external examinations imposed from above upon the schools. It is not a dignified position for the schools, and they have rebelled. Prof. Sherrington, F.R.S., read a paper later on child study, in which he urged that this study could not devote itself more profitably at the present time than to what may be termed the natural history of the child. In healthy school life lay the first line of defence

against race deterioration. It would help society if teachers and physiologists could combine to examine into the mischief to growth resulting from hours of breathing vitiated air, from want of warm clothing that economized food, from semi-starvation, from improper food, from chronic fatigue, and from insufficient rest and sleep in bed. Among other subjects dealt with were the teaching of geography, the teaching of domestic science, and the place of handwork in the school curriculum.

ELEMENTARY, SECONDARY, AND TECHNICAL.

A CONFERENCE of teachers from elementary and secondary schools and technical institutes was held under the auspices of the London County Council at the Medical Examination Hall, Victoria Embankment, on January 5, 6, and 7, under the presidency of Sir William Collins. Discussing the teaching of arithmetic, Mr. C. T. Millis, Principal of the Borough Polytechnic, said that what is needed is that some of the time now spent in teaching special rules in money sums should be devoted to giving a sound knowledge of general principles. Mr. S. O. Andrew (Croydon) said that, whatever part of arithmetic may be given up or postponed, there is a general agreement that it must still include a knowledge of the standards of measurement necessary for the investigation of physical phenomena. The need for a co-ordination of the elementary instruction in arithmetic and geometry was emphasized by subsequent speakers.

THE NATIONAL FEDERATION OF HEAD TEACHERS.

THE eighth annual conference of the National Federation of Head Teachers' Associations was opened at Cambridge on January 4. On the second day, Dr. Hill, Master of Downing College, opened the proceedings with a paper on "Words and Thoughts—the Importance of Training in Expression." A training in a highly grammatical language, he said, was a training in the art of thinking. The object of all school education might be summed up as teaching to read. It was through reading, and after school-days, that all fertile knowledge was obtained, and, since the purpose of written language was the representation of speech, he would propose as the test of efficiency in reading the scholar's ability to reconvert print into speech. The following resolutions were carried:—

That this conference deplores the fact that teachers of insufficient qualifications and training in the art of teaching are, owing to the dearth of teachers, now being appointed by Education Authorities on the staff of our schools.

That the most effective way to increase the supply of teachers is to make their position and prospects more attractive by an equitable treatment of them as public servants.

That this Federation hopes that Educational Authorities will establish additional training colleges for teachers as soon as convenient, which shall be attached to a university or college of university rank.

That this conference desires to point out the grave danger to education which would arise from compelling teachers to serve in particular districts after the training college course or on becoming qualified as certified teachers, and requests the Board of Education not to sanction such compulsory services.

That educational work, being a matter of great national importance, requires the services of persons of high character and proved intellectual ability, and the interests of the work demand that in no case should the qualifying examination for a teacher's certificate be lowered.

That this conference is strongly of opinion that pupil-teachers should not be counted on the effective staff of any school, and that their qualification for thirty scholars each should be deleted from the Code.

A specially interesting paper on "Scholarships," by Prof. Sadler, was read by the Secretary. Prof. Sadler urged that in building up a complete scholarship system in a locality, the need for the following kinds of scholarships must be borne in mind:—

- (1) Minor scholarships tenable at secondary schools from twelve to sixteen years of age with power of extension to eighteen or nineteen in cases of exceptional merit and in appropriate schools;
- (2) major scholarships carrying on boys and girls of special promise from the secondary schools to universities or other places of general or technical education;
- (3) evening-class scholarships to carry on students from the ordinary evening continuation schools to higher evening centres, for technical or commercial instruction;
- (4) scholarships for art students carrying on pupils from the elementary drawing classes to the higher classes (day or evening) in the locality, and, in cases of exceptional promise, from the local school of art to schools or studios elsewhere in Great Britain and abroad;
- and (5) a miscellaneous group of scholarships tenable at day courses at places of

technical or professional instruction, including schools of domestic economy. In the case of the last four classes, he would urge that, as far as may be, the award should be made, not in competitive examination, but after consideration of the pupil's own record supported by the recommendation and confidential report of his teachers. He discussed the method of awarding junior scholarships tenable at secondary schools. The remainder of the session was devoted to a discussion of questions connected with superannuation.

UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

Oxford. Your correspondent must be forgiven if—writing, as he does, with term only just in its infancy—he has little to record and if, with the chill of the weather in his bones, he does not feel inspired to assume the mantle of the prophet. Since he last wrote a new President of Corpus has been elected. Prof. Case is well known in Oxford and in the columns of the *Times*. He is a good philosopher and a good fighting Tory; he is also very excellent company, and, like his predecessor at Corpus, the subject of many stories, veracious and otherwise. Honours men will bear witness to the vivacity of his lectures (and he has lectured on history as well as philosophy), and the pass man, though he may forget that the new President was a cricket Blue, will, perhaps, have a memory sufficiently long to remember that he has given us two good cricketering sons, both of whom were mainstays of the Winchester Eleven, though only the elder passed into the University Eleven here.

During the vacation Oxford, academic and civic, suffered two losses in the death of the Vicar of St. Mary's (the Rev. H. L. Thompson) and the recently appointed Mayor, Mr. Taphouse.

Mr. Thompson made an ideal Vicar of St. Mary's—a difficult position to fill and still more difficult to refill, and he had been a successful Warden of Radley College. Mr. Taphouse had been with difficulty persuaded to accept the "chief civic office," and it was therefore pathetic that he should have died so soon after his acceptance of the offer.

In the premature death of Mrs. Brownrigg, of Magdalen College School, both the University and city lost a lady who was widely and deservedly popular amongst those of even the most divergent tastes.

Oxford, we hear, is to welcome back as a Fellow of his old college (New College) Mr. G. G. A. Murray, formerly Professor of Greek at Glasgow. Mr. Murray is to lecture, we believe, on a subject which he has made peculiarly his own—Euripides. But, if New College are to gain, they are also soon to lose; for, unless rumour be a lying jade, Mr. Nowell Smith has been persuaded by Dr. Burge to join the staff at Winchester.

There is a report about, and one which seems more definite than some Oxford reports, to the effect that the abolition of Coopers Hill is to be followed by the institution here of one of the Coopers Hill departments—to wit, Forestry. If the report be true, it is not very easy to see what position, if any, the students will take in the University. There is no diploma in Forestry, and in itself it hardly seems fitted for an untechnical university.

Your correspondent hesitates to mention Greek; but "those in the know" seem to think that the sleeping dogs will not be content to lie long quiescent, and that the whole question may be started again before long owing to the scheme of a "School-leaving Certificate" which has been formulated by the Oxford and Cambridge Board. If the certificate is to be accepted as a general test of education, then, say some, it will be hard to exclude the holders from entrance to the University, even though they be Greekless. Against this stands the fact that it is at the moment practicable to obtain a "Senior Certificate" without a knowledge of either Latin or Greek, and yet there has been no agitation for the admission of such candidates to the University on the strength of their certificate.

Our grounds are frozen and slippery and the river is encumbered with ice; so that it is no good inventing athletic details. By next month we shall know more of the chances of the University Eight and of the athletes for Queen's Club.

Dublin. In making the munificent gift to Trinity College, Dublin, which we record elsewhere, Sir John Nutting, Bart., says that, whatever the causes, "there can be no doubt that the inability of Irish Roman Catholics to

obtain the advantages of the best kind of University education is a public misfortune, the unhappy results of which are visible in every aspect of the national life." No remedy, it seems to him, can be permanent or satisfactory which does not satisfy three conditions:—

(1) That a University education of the best type shall be easily accessible to all young Irishmen and Irishwomen of ability and ambition, without distinction of creed or class. (2) That such young men and women of all creeds and classes shall receive their University education in common, and that no barriers shall divide them at the time when they are being shaped into useful citizens of a country whose traditions and opportunities are their common heritage. (3) That it shall be possible for University students of all creeds to have the religious opportunities which their conscience demands, so that no students shall be required to sacrifice in the smallest degree any religious scruple to the claims of secular education.

Sir John concludes that "the remedy which is at once the simplest, the most practical, and the most efficacious, and which can easily be made to satisfy those three conditions, is to be found in the direction of your present efforts to make Dublin University in fact what it has been in name—the National University of Ireland." Two obstacles have prevailed hitherto to make this remedy unattainable in practice—

(1) The fact that the facilities offered to young men and clever Roman Catholics of the less wealthy classes to obtain higher education within your walls have been in the past extremely inadequate. (2) The scruples of the Roman Catholic ecclesiastical authorities with regard to the religious welfare of Roman Catholic students in Trinity College.

"I respect these scruples," adds Sir John, "and believe that they ought not to be ignored, even if to ignore them were a practical possibility."

Lecds. THE West Riding Education Committee has agreed that the proposal of a sub-committee to allocate £4,500 to the University of Leeds and £1,500 to Sheffield should be adopted, both grants to be annual and subject to the following conditions:—(1) the right of the County Council to representation on the Court, the Council, and any Advisory Committee of the Universities as constituted by statute; (2) the reference to the County Council of any new principles affecting the finances of the Universities, which may be proposed from time to time; (3) the right of the County Council to consider and investigate the financial *status* and business position of the Universities from time to time, and, if not satisfied upon such investigation, to withhold the grant or any instalment of it; (4) the allocation of a fixed sum to the department for the training of teachers and the study of education—£800 to the University of Leeds, and £400 to the University of Sheffield, with provision for the representation of the County Council on any committee of management of such department.

Edinburgh. THERE were 3,000 matriculated students (including 317 women) attending Edinburgh University during 1904, which is the highest reached for eleven years. Of that number 881 (including 289 women) were enrolled in the Faculty of Arts, 231 (including 7 women) in Science, 47 in Divinity, 341 in Law, 1,480 (including 4 women) in Medicine, and 20 (including 12 women) in Music. Of the medical students, 683, or over 46 per cent., belonged to Scotland; 352 were from England and Wales; 113 from Ireland; 74 from India; 238 from British colonies; and 20 from foreign countries. Besides these matriculated students, there were 69 non-matriculated students, 33 of whom were women, attending music and French and German literature classes. The number of women attending extra-academical lectures, with a view to graduation in Medicine in the University, was 116.

Lampeter. THE annual report indicates that the past year has been a very successful one. The average number of students in residence was the highest that has ever been attained, and has been only once equalled—in 1884. The examiners' report and the result of the Bishop's examinations show—in the words of the examiners' report—the "excellence of the teaching in all subjects" and "abundant interest on the part of the learners." The work done in the *Parochialia* examination shows the interest taken by the men in the practical or professional side of their training.

At the New Year's reception yesterday (says the Berlin *Lokalanzeiger*, January 2) the Emperor William entered into a long conversation with the American Ambassador. His Majesty expressed the wish that American scholars might come to Germany and give lectures in German Universities; while, on the other hand, German professors should visit American Universities and spread German learning there. The carrying out of such a scheme would contribute to a better mutual understanding on the part of the two peoples. The Ambassador promised to do everything he could to give effect to the Emperor's suggestion. We understand that Berlin and Harvard Universities have taken up, in a practical spirit, this idea of a temporary interchange of professors.

SIR LAUDER BRUNTON's proposal for the establishment of a National League for Physical Education and Improvement has received the approval and promised support of a remarkable body of public men. Nearly 250 men of eminence in the Church, politics, law, medicine, science, and literature have authorized publication of their names as being willing to assist in the movement, the majority of them having agreed to become vice-presidents.

At a meeting in Manchester (January 11), presided over by the Lord Mayor, a brisk discussion took place as to the extended employment of University men in business posts. The following resolutions were passed:—

That it is highly desirable that more graduates of the Universities and other persons who have received education on the University standard should be drawn into business, and that there is a need in this city of some organization whereby such of them as desire to enter business may be brought into contact with its business houses.

That, in the opinion of this meeting, the best means by which this object can be secured in Manchester would be the establishment, in connexion with the Manchester Chamber of Commerce, of a bureau for graduates and other highly trained men who would keep in touch with universities and institutions of similar character on the one hand and with business houses on the other.

At a meeting of the North Staffordshire Institute of Mining and Mechanical Engineers (January 9), Mr. A. H. Heath, M.P., presiding, it was decided to send a deputation to the Staffordshire County Council, pointing out the growing necessity of a Technical College for North Staffordshire. The President announced that the Mining Institute had promised to subscribe liberally towards the cost of the proposed new college, which would consist of a training college for pupil-teachers, a mining school, and possibly a pottery school. Prof. Turner, of Birmingham University (formerly Director of Technical Education under Staffordshire County Council), said that all that could at present be aimed at was a college of University type, affiliated with some University outside the district. They were striving for this scheme to obtain £25,000, so as to cover part of three acres of ground with suitable buildings. The site had already been provided for them at Stoke-on-Trent by the late Mr. A. S. Bolton, of Oakmoor. The North Staffordshire College might be affiliated with the Manchester or the Birmingham University. The part of the buildings required for teachers and for pupil-teachers they might expect the County Council would pay for. That would be rather more than half the cost. The County Council might also provide part of the cost of the technological, science, and administrative sections. From the County Council also the proposed college might receive assistance equal to the money now spent in teaching, apparatus, and materials for the technological classes of the district. Mr. A. W. Brown, Secretary to the North Staffordshire Council for Promotion of Higher Education, briefly outlined the scheme for the proposed college, and said that of the £25,000 required half would have to come in public subscriptions. He believed they would get that amount.

A DEPUTATION from the Executive Committee of the Association of Education Committees (England and Wales) waited upon the Board of Education (January 5) to urge the adoption of a more liberal scale of grants for secondary schools, to ask for a larger share from the Government of the cost of training pupil-teachers, and to urge the necessity for the compulsory attendance up to the age of fourteen at evening continuation schools of all children who do not continue as whole-day scholars up to that

age. Sir William Anson, in reply to the deputation, agreed that more money should be allowed to secondary schools, but, though such a demand would have his support, he was by no means sure of obtaining the necessary funds. He expressed the opinion that the question of cost made it almost impossible to enforce a system of compulsory attendance at evening continuation schools up to fourteen years of age for children leaving the day school before that time. Until we had a better system for the training of pupil-teachers and a better security that the education given in the elementary school lasted, and a system of evening continuation schools and a better secondary education system with larger grants for secondary schools, Sir William added, he would not be a party to asking for another penny for elementary education, as such.

At a meeting of the Royal Statistical Society, Mr. L. L. Price, M.A., read a paper on "The Accounts of the Colleges of Oxford, 1893-1903, with special reference to their Agricultural Revenues." Mr. Price mentioned that the gross external receipts of the colleges and the University in 1903 exhibited an increase on 1893 of £20,797, and on 1883 of £16,343. The net external receipts of the colleges alone showed an increase of £16,566 on 1893, and a decrease of £10,311 from 1883. In 1903 the total receipts from the lands of the colleges were £720 more than in 1893, and £15,805 less than in 1883. In the case of one college, which was largely dependent upon tithe, the receipts from lands increased slightly between 1883 and 1903; but the fall in tithe caused a decrease of more than a sixth in the income from lands and tithe together, and the expectations once entertained of a large increase in the agricultural income of the colleges by the substitution of rack-rent tenancies for beneficial leases had been in most instances continuously disproved. Had it not been for an increase in revenues derived from other sources, the colleges and the University would have been crippled yet more seriously. Any serious diminution in their external receipts was not unlikely to exert a prejudicial influence on their educational potentialities. A similar general deduction was drawn from the accounts of the University as distinct from the colleges.

THE Report of the Commissioners of National Education in Ireland, while noting many difficulties traceable to lack of funds, exhibits interesting figures of educational progress. In the year 1851 the population of Ireland was 6,552,385, and 47 per cent. of the population of five years old and upwards could neither read nor write. In the year 1901 the population was 4,458,775, and only 14 per cent. of the population of five years old and upwards could neither read nor write. In 1871, of children of five years and under ten years of age, only 20 per cent. could read and write. In 1901 the percentage was 53.5. In 1871, of children of ten years of age and under fifteen, 59 per cent. could read and write, and in 1901 the percentage had risen to 94.

THE Committee nominated by the four hundred Irish Roman Catholic laymen who, in 1902, signed a petition in favour of Irish university reform, on the lines of the Dunraven scheme, met in the beginning of last month and adopted a statement defending the principles of that scheme and denying that it was calculated to consolidate or to increase clerical control over education. The statement says: "The scheme of university reform projected last year sought to add another college to the University of Dublin; but this college was to be absolutely free from tests. Catholics and non-Catholics were alike to be admissible to its studies, honours, and administration. The clergy were to have no representation *de jure* on the governing body, and such representation as they might have *de facto* was to be strictly limited." The statement points out that a monopoly of education devolved on the Roman Catholic clergy as a natural result of the penal laws; that they have still no lay competitors; that a university education is necessary to the creation of an effective body of lay teachers; that until a strong body of lay teachers shall have been created the education of lay Roman Catholics must remain under clerical control; and that to withhold from Roman Catholic laymen a satisfactory university system is to perpetuate such control. It adds: "While we Catholics gratefully recognize the important services in the matter of education rendered by the clergy, and while we are strongly opposed to the secularization of schools, we are not blind to the advantages which would result from the creation of

a profession of lay teachers such as in every enlightened country. Catholic or non-Catholic, exists and co-operates in the work of the secondary schools." In conclusion, the statement protests strongly against "the novel plea officially made last Session, that the Government is not called upon to act until there is an agreement among all parties on the question."

THE Most Rev. Dr. Clancy, Bishop of Elphin, speaking at the annual distribution of prizes at Summerhill College, Sligo (December 30), thought the educational outlook in Ireland was much brighter than it had been for a long time. The Bishop of Limerick had done much to disabuse the public of the false idea that the university question was more or less a bishops' question; but nothing, in Dr. Clancy's opinion, had occurred in many years better calculated to set the country right on this vital question than the speech delivered at Belfast by Mr. John Redmond. Mr. Redmond showed that the university question, so far from being a bishops' question or an aristocratic question, was pre-eminently a poor man's question, and that for the absence of university education in Ireland the sufferers are the sons of the labourers, the artisans, the shopkeepers, and the farmers of the country. Already his action had produced its natural result: County and District Councils, Boards of Guardians, urban corporations, committees appointed for the management of public institutions had all taken the matter up. The next step was the ardent adoption of the cause by the branches of the League throughout the country. The Irish Party should take off their coats to it. The country should support them by every means that could strengthen their position, and by their united efforts they must make it hot for the Government. Then, and not till then, could they hope to have any serious effort made by our rulers to do justice to Ireland in the matter of university education.

At the annual meeting of the Association of Teachers in the Secondary Schools of Scotland Mr. J. B. Clark (George Heriot's College School, Edinburgh), President, in his retiring address said he hoped that the next Education Bill would place the control of education in the hands of County Councils as against the *ad hoc* system, and, although he at first was in favour of one national council in place of four prominent provincial councils, he was now rather inclined to support the creation of provincial councils, because they would be admirably suited to take charge of the training of teachers.

At a meeting of the representatives of the various educational bodies in Scotland interested in the formation of a Local Committee for the Training of Teachers, held in Edinburgh University (December 9), a letter from Sir Henry Craik, in answer to the proposals forwarded to the Scotch Education Department by the conference held on November 10 last, was laid before the meeting. "While my Lords have received the proposals with much interest, they refrain," wrote Sir Henry Craik, "from dealing with them in detail pending the result of certain proposals which have been discussed with some of the training college authorities, and which, if realized, would lead to the formation of committees for the training of teachers on a wider basis and with a more comprehensive scope." After consideration, the representatives resolved to delay taking any further steps until they were informed of the result of their lordships' negotiations with the existing training colleges.

OUR readers will remember the sad death of Mrs. Greenstreet, wife of Mr. Greenstreet, Head Master of Marling School, Stroud, and an esteemed contributor to our mathematical columns, in a courageous, but unsuccessful, attempt to save the life of her maid when bathing at West Pentire some eighteen months ago. The following resolution passed by the Committee of the Royal Humane Society on December 15 last, and engrossed on vellum, has now been received by Mr. Greenstreet:—

That the heroism displayed by the late Mrs. Ethel de Medina Greenstreet, who, unfortunately, lost her life while attempting to rescue Kate Wilks, who was drowned while bathing in the sea in Crantock Bay, Cornwall, on the 26th August, 1903, merits the highest praise of this meeting, and the Committee, in sympathizing with her relations, desire to record their admiration of her courageous and noble conduct.

DR. CORNWELL'S SCHOOL BOOKS

Edited by J. CORNWELL ROUND, M.R.C.S.

With numerous Revisions and Additions by BEN JONSON.

THE YOUNG COMPOSER. Forty-ninth Revised Enlarged Edition. Contains Sections on the Composition of Sentences, Paragraphs, Essays, Précis, Letters, Telegrams, and Commercial Documents, also on "Press Corrections." 1s. 6d.

"The book is complete and practical."—*School Guardian*, October, 1904.
"Altogether the book is a very valuable aid for those who wish to gain the power to write clearly, accurately, and gracefully."—*School Manager*, October, 1904.

A SCHOOL GEOGRAPHY. Ninetieth (Memorial) Edition. With Coloured, Black-and-White, and Star Maps; also numerous Diagrams. The Reviser has brought this book thoroughly up to date, and it now contains 384 pages, exclusive of 64 pages of Maps. 3s. 6d.

"The book is an immense storehouse of accurate geographical information, and a very suggestive book to the teacher."—*Educational Record*, June, 1904.

"Seeing that it has thirty-six coloured Maps, and nearly twice as many uncoloured, the price is wonderfully low."—*Journal of Education*, July, 1904.

GEOGRAPHY FOR BEGINNERS. Seventieth Edition. Has been Enlarged and Revised, Maps and Diagrams having been also added. It now contains 160 pages of interesting matter. 1s.

"We have tested both these books on many points, and in every case with the most satisfactory results."—*School Guardian*, May, 1904.

GRAMMAR FOR BEGINNERS. Ninety-first Edition. 1s. Revised, and with additional Section on Analysis of Sentences.

ALLEN AND CORNWELL'S SCHOOL GRAMMAR. 1s. 9d.

GINN & COMPANY, 9 ST. MARTIN'S STREET, LONDON, W.C.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.** Annual Income, **£398,982.**

Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (See Prospectus.)

IMPORTANT NOTICE.

THE SCHOOL JUNIOR SERIES.

BOOKS SUITABLE FOR THE

COLLEGE OF PRECEPTORS' CERTIFICATES

AND THE

OXFORD AND CAMBRIDGE LOCALS.

ARITHMETIC, THE JUNIOR. Adapted from **The Tutorial Arithmetic.** By R. H. CHOPPE, B.A., of Kingswood School, Bath. 2s. 6d.

"Will prove very suitable for students preparing for the Junior Locals and College of Preceptors' examinations."—*Practical Teacher.*

"A more than usually satisfactory book."—*Teachers' Monthly.*

"A modern arithmetic, based on sound educational principles."—*Schoolmasters Yearbook.*

BOOKKEEPING, JUNIOR (or THE PRECEPTORS'). By THOMAS CHALICE JACKSON, B.A., LL.B. Lond., Barrister-at-Law. 1s. 6d.

"The book is an excellent one."—*Accountants' Magazine.*

"We can recommend this practical work for secondary schools."—*Practical Teacher.*

"A very cheap and efficient guide to the subject."—*Schoolmaster.*

CHEMISTRY, JUNIOR LOCAL. By R. H. ADIE, M.A., B.Sc. [In preparation.]

FRENCH COURSE, JUNIOR (or THE PRECEPTORS'). By ERNEST WEEKLEY, M.A., Camb. and Lond. *Second Edition.* 2s. 6d.

"The execution is distinctly an advance on similar courses."—*Journal of Education.*

"This volume should well serve its purpose."—*School Guardian.*

"A useful class book."—*Secondary Education.*

FRENCH READER, JUNIOR (or THE PRECEPTORS'). With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. 1s. 6d.

"A very useful reader with a good vocabulary and sensible notes."—*Schoolmaster.*

"The passages are carefully graduated in difficulty, and will afford excellent practice in unseens. As a class book it will be found useful."—*Teachers' Aid.*

GEOMETRY, JUNIOR. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. [In preparation.]

LATIN COURSE, JUNIOR (or THE PRECEPTORS'). By B. J. HAYES, M.A. Camb. and Lond. *Second Edition.* 2s. 6d.

"This is certainly better than most grammars that we have seen."—*Secondary Education.*

"The rules are clear, the matter is well graduated, and the examples and exercises are abundant and judiciously constructed."—*Schoolmaster.*

LATIN READER, JUNIOR (or THE PRECEPTORS'). By E. J. G. FORSE, M.A. Camb. and Lond. 1s. 6d.

"We heartily commend the book."—*Secondary Education.*

"It is one of the best books of translation that we have seen."—*School Guardian.*

"Teachers in secondary schools should make a point of seeing this work."—*Educational News.*

MECHANICS, JUNIOR (or THE PRECEPTORS'). By FABIAN ROSENBERG, M.A. Camb., B.Sc. Lond. 2s. 6d.

"The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster.*

"A practical book for this subject. It will be found exceedingly useful."—*Educational News.*

"A valuable text-book for students preparing for examinations in which the subject is required."—*Chamber of Commerce Journal.*

TRIGONOMETRY, JUNIOR (or THE PRECEPTORS'). Edited by Wm. BRIGGS, LL.D., F.R.A.S. 2s. 6d.

"The book meets excellently the wants of the student reading for the College of Preceptors' examination."—*Guardian.*

"This book is intended for students preparing for the College of Preceptors' examinations, but is suitable for any one of that standard."—*School World.*

CURRENT EVENTS.

THE next Evening Meeting of the Members Fixtures. of the College of Preceptors will take place on Wednesday, February 15, at 7.30 p.m., when Prof. J. Adams, M.A., will read a paper on "The Sunny Side of Egotism: an Examination of the Educational Applications of Self-reference."

THE REV. DR. MOORE'S Barlow Lectures on "Dante's Paradiso" at University College, London, will be delivered on February 8, 9, 15, 16, 22, 23, at 3 p.m. Open.

A CONFERENCE on school hygiene, arranged by the Royal Sanitary Institute, will be held in the University of London, under the presidency of Sir Arthur W. Rücker, on February 7–10.

M. LE PASTEUR DÉGREMONT, B.A., B.D., will lecture to the Société Nationale des Professeurs de Français en Angleterre at the College of Preceptors on "Sainte-Beuve," on February 25.

A STUDENTS' Congress of representatives of all the British Universities will be held in London, June 26 to July 1.

PROF. GEDDES, of University College, Dundee (University of St. Andrews), will give a course of ten lectures on "Great Cities: their place in Geography, and their relation to Human Development," at the Horniman Museum, Forest Hill, on Saturdays at 11.30 a.m., during February and March.

THE Modern Languages Holiday Courses arranged by the Teachers' Guild will be held again in August at Tours, Honfleur, Neuwied-am-Rhein, and Santander. Preliminary circular ready this month, and handbook (with final arrangements) on May 1 (6d., post free 6½d.).

THE honorary freedom of the Musicians' Company has been conferred upon Dr. W. H. Cummings, the Principal of the Guildhall School of Music, and the Rev. F. W. Galpin, of the Vicarage, Hatfield Broad Oak, Harlow, Essex, for services rendered by them in connexion with the Company's Tercentenary Exhibition, 1904.

SIR HENRY CRAIK has been presented with the freedom of the Worshipful Company of Plumbers in recognition of his services to the cause of education, particularly as Secretary to the Scottish Education Department.

THE Archbishop of Canterbury has conferred the honorary degree of Doctor of Music upon Mr. William Stevenson Hoyte, who has been for upwards of thirty-six years the organist and choirmaster of All Saints', Margaret Street, London.

IN Convocation at Oxford, on February 7, it will be proposed to confer the honorary degree of Doctor of Music on

Prof. Sir Edward Elgar, Hon. Mus.Doc. Cambridge and Durham.

* * *

THE Court of the University of Manchester has conferred the honorary degree of D.Sc. on Prof. Calmette of Lille, Prof. Perroncito of Turin, Prof. C. J. Salomonsen of Copenhagen, and Captain Scott of the "Discovery," on the occasion of the opening of the new Public Health Laboratories.

Endowments and Benefactions.

SIR JOHN NUTTING, Bart., has offered to endow for a period of five years ten annual entrance exhibitions, each £50 for two years, at Trinity College, Dublin, for "ten young men or women who shall have competed with success at the Senior or Middle Grade Examinations of the Board of Intermediate Education in Ireland," being "pupils of Irish secondary schools (Protestant and Roman Catholic) which have no other endowment than the 'results fees' of the Intermediate Board." Sir John also offers, in case his exhibition scheme succeed in attracting "a sufficient number of Roman Catholics," to give £5,000 towards the erection of a Roman Catholic chapel within the walls of Trinity College on the site to be provided by the College. Trinity College has accepted the proposals.

* * *

THE late Dr. Fowler, President of Corpus Christi College, Oxford, bequeathed £1,000 to Merton College (where he was an undergraduate), £1,500 to Lincoln College (where he was Fellow and Tutor), £1,500 to Corpus Christi College, and £1,000 to King William's College, Isle of Man.

* * *

MR. NORMAN MACCOLL, late editor of the *Athenæum*, bequeathed £500 to the University of Cambridge to provide lectures on "The Language and Literature of Spain and Portugal," and he left his books on these subjects to the Library of the University of Cambridge.

* * *

AN appeal for funds on behalf of the Cambridge University Library is being issued by the University Association, with the approval of the Library Syndicate.

* * *

MRS. STRONG has presented the Oriental section of the library of the late Mr. Arthur Strong, Professor of Arabic in University College, London, and Librarian to the House of Lords, to University College.

* * *

THE Drapers' Company have voted a further sum of £400 a year for five years towards the statistical work and higher teaching of the Department of Applied Mathematics, and the Mercers' Company have voted £1,000 to the Chair of Physiology, in University College, London.

* * *

THE Duke of Devonshire has promised £1,000 towards the Leeds University Fund.

* * *

THE HON. EMILY CRAWFORD MEYNELL-INGRAM has left additional endowments of Meynell-Ingram Scholarships at Lichfield Theological College, and at St. Anne's College, Abbots Bromley, Staffordshire.

* * *

CONTRIBUTIONS are invited to the fund for acquiring 250 acres on the east side of Harrow Hill for Harrow School. The price is £75,000.

* * *

It is reported that the Viceroy of the Chi-li Province has endowed the University of California with five scholarships for Chinese students, to whom employment under the Chinese Government is promised when they have graduated; and that four students under the endowment have already been selected.

Two leaving exhibitions to the University (£40 a year for three or four years) have been promised to Bath College—one by Messrs. Mallett and Pitt (Governors of the College), and one by "two distinguished Old Bathonians," at present unnamed.

Scholarships and Prizes.

QUEEN'S COLLEGE, OXFORD, offers during the present year a Dixon Exhibition, £38 a year for four years, tenable by a native of Whitehaven under twenty-one. Candidates forward certificates of birth and character to the Provost, May 1-15. Examination in June.

* * *

ABOUT twenty scholarships, £20 to £50 a year, and exhibitions for men and women, tenable at University College, London, King's College, London, and East London Technical College, in the Faculties of Arts, Science, and Engineering, will be offered for competition on June 27. Entries close on May 30. Particulars and forms of application from the Secretary of the London Intercollegiate Scholarships Board, King's College, Strand, W.C.

* * *

A CARNEGIE Research Scholarship (or scholarships) will presently be awarded on the recommendation of the Iron and Steel Institute. Candidates to be trained men under thirty-five. Apply to the Secretary by the end of February.

* * *

THE Board of Education give notice that applicants for Studentships-in-Training at the Royal College of Science are required to fill up and forward the proper form by June 15 or June 20. Copies of forms from the Secretary, Board of Education, South Kensington, S.W.

Appointments and Vacancies.

THE President of the Board of Education has appointed Mr. R. B. Haldane, K.C., M.P., to be Chairman of the Departmental Committee inquiring into the present and future working of the Royal College of Science and Royal School of Mines, South Kensington, in place of Sir Francis Mowatt, G.C.B., late Secretary to the Treasury, who, while remaining a member of the Committee, has resigned the chairmanship on account of illness.

* * *

MR. GIBBERT KAPP, Lecturer on Dynamo Construction in the Technical Institute, Charlottenburg, has been elected first Professor of Electrical Engineering in Birmingham University.

* * *

DR. CAMERON, Medical Officer of Health for Leeds, has been appointed Professor of Public Health in Leeds University.

* * *

MR. T. S. DYMOND, Lecturer to the Essex Technical Instruction Committee and Essex Education Committee, and Principal Lecturer of the Agricultural and Chemical Department of the County Technical Laboratories at Chelmsford, has been appointed to an Inspectorship under the Board of Education, and to act as special adviser in matters of rural education, of Nature study in public elementary schools, of agricultural instruction in evening (including afternoon and Saturday) schools, and of the advancement of various forms of technical education in rural districts.

* * *

MR. WILLIAM LORING, M.A., formerly Fellow of King's College, Cambridge, and late Director of Education under the West Riding County Council, has been appointed Warden of the Goldsmiths' College, New Cross (University of London).

It is reported from New York that Mr. Louis Rouillon, Professor of Manual Training at the Teachers' College, Columbia University, has been appointed Chief Inspector of Technical Education for Ireland.

* * *

At the Northampton Institute (London), Mr. H. M. Hobart has been appointed Lecturer in Electrical Engineering Design, in succession to Mr. E. Kilburn Scott, who has been appointed Lecturer in Electrical Engineering in the University of Sydney; and

Mr. M. Holroyd Smith has been appointed Chief Assistant in the Mechanical Engineering Department, in succession to Mr. W. E. Curnock, who has been appointed Head of the Mechanical Engineering Department of the Technical College, Huddersfield.

* * *

MR. EDGAR SCHUSTER, M.A. New College, Oxford, has been appointed to the Francis Galton Research Fellowship in National Engenics.

* * *

MR. HUGH DICKIE, B.A. (Lond.), LL.D. (Glas.), retires from the Head Mastership of Kilmarnock Academy, which he has held for 29 years.

* * *

MR. CHARLES H. CLARKE, Ph.D., Head Master of the Modern Languages Department, Montröse Academy, has been appointed Senior Modern Languages Master, Campbell College, Belfast. He is succeeded by Dr. H. Cimino, Higher-Grade School, Darwen.

* * *

MISS C. J. M. HUBBACK, of University Hall, Fairfield, Liverpool, has been appointed Head Mistress of Chester City and County School for Girls.

* * *

MR. ERNEST SHEARER, M.A., B.Sc., has been appointed Lecturer on Agriculture at the Pusa Imperial College, Bengal.

Literary Items.

THE Committee of the Liverpool Institute of Archæology has been enabled by the munificence of Sir John Brunner to take in hand the publication of a "History of Egypt," to include all the results of modern research, and to be, so far as possible, a complete history of the Egyptian civilization from the earliest times down to the conquest by Alexander the Great. It is estimated that the work will take two years to complete, and it will be published with full photographic illustrations.

* * *

"CASSELL'S Illustrated History of England," which has been undergoing improvement for some fifty years, is now beginning to appear in an "Empire Edition," with new Rembrandt photogravure plates reproduced from famous pictures in the public galleries, and with additional coloured plates and maps in colours expressly prepared for the present edition. The first weekly number is just issued.

* * *

DR. ANDREW MACPHAIL'S "Essays in Puritanism," just published by Mr. Fisher Unwin, is a series of studies of five representative figures—Jonathan Edwards, John Winthrop, Margaret Fuller, Walt Whitman, and John Wesley.

* * *

MR. FROWDE will publish immediately for the Clarendon Press an edition of the "Euthydemus" of Plato, by the Rev. E. H. Gifford, D.D., and a text-book on "The Elements of Railway Economics," by Mr. W. M. Acworth.

* * *

THE Cambridge University Press has just issued an important volume of "Studies on Anglo-Saxon Institutions," by H. Munro Chadwick.

MESSRS. SAMPSON LOW, MARSTON, & CO. announce a reissue of the Rev. Dr. Paterson Smyth's "Old Documents and the New Bible"—an easy lesson in Biblical criticism.

* * *

THE *Independent Review* for February is predominantly political, substantial, and varied. Mr. J. A. Hobson writes trenchantly on "Millionaire Endowments."

* * *

THE January number of *Child Life* (Is., Philips) has half a dozen varied and interesting papers, one of which is a continuation of Mr. Ebenezer Cooke's inquiry, "Is Development from within?" with polemics against Mr. Graham Wallas and Mr. H. C. Bowen.

* * *

THE Religious Tract Society will start "Every Boy's Monthly" (1d.) on February 14, under the editorship of Mr. G. A. Hutchison, who has edited the *Boy's Own Paper* for more than a quarter of a century. We wish the new paper every success in its object, which is "to counteract the effects of the literary garbage still so largely circulated amongst lads."

THE Board of Education are now giving General. special attention to the various problems connected with rural schools, and hope to bring gradually to the notice of the Local Education Authorities different methods and lines of teaching, of object lessons, and of Nature study which have been found effective in rural elementary and secondary schools, and also to assist and advise Local Authorities in developing in evening and day technical classes such special forms of home industries and of technical instruction as are specially needed in rural districts.

* * *

A CONFERENCE of representatives of the Universities of Leeds, Manchester, and Liverpool, of University College, Sheffield, and of the principal Educational Authorities in Yorkshire, Lancashire, and Cheshire, held at Manchester (January 20), resolved "that by the joint action of the Local Educational Authorities and Universities of Cheshire, Lancashire, and Yorkshire, a Joint Examining Board should be established."

MADAME MICHAELIS, pupil of Baroness von Bülow and pioneer of the kindergarten system in this country, died on December 30. She was the first Principal of the Froebel Educational Institute in West Kensington, which grew out of her Kindergarten and Training College for Kindergarten Teachers in Norland Place, Notting Hill. She was a native of Botha, in Thüringen.

COLLEGE OF PRECEPTORS.

HALF-YEARLY GENERAL MEETING.

THE ordinary Half-yearly General Meeting of the members of the Corporation was held at the College on Saturday, January 28.

The Secretary having read the advertisement convening the meeting, Dr. WORMELL was appointed Chairman.

The report of the Council was laid before the meeting and was taken as read, a copy of the same, together with the abstract of accounts for the past year, having been previously forwarded to every member. It was as follows:—

REPORT OF THE COUNCIL.

The Council beg to lay before the members of the College the following Report of their proceedings during the past half-year:—

1. They have to report that the number of candidates entered for the Christmas Certificate and Lower Forms Examinations is about 8,550, showing no diminution as compared with the number of entries for the corresponding Examination last year. For the Midsummer Examination the number of entries was about 5,770, making a total for the year of about 14,300, an increase of 240 on last year's figures. There is a considerable increase in the entries from the Colonial Centres, especially in South Africa, there being no fewer than eleven separate Centres in the Transvaal, Orange River Colony, and Cape Colony.

2. The Professional Preliminary Examination for intending Medical Students and others was held in the first week in September, and was attended by 275 candidates, an increase of 71 as compared with the number entered for the September Examination last year.

3. The Summer Examination of Teachers for the College Diplomas was held this year for the first time at the end of the Midsummer Vacation, instead of in July as heretofore. The number of candidates examined was 445. For the Christmas Examination, to take place in the first week in January, the number of entries is 569, so that the total number of Diploma candidates for the year is over 1,000, a larger number than has been examined by the College in any former year. During the past half-year, the Diploma of Licentiate has been conferred on 14 candidates, and that of Associate on 122, who had passed the required examinations.

4. In addition to the above Examinations of pupils and teachers, the Council have conducted during the past half-year the Examination and Inspection of 7 schools by Visiting Examiners and Inspectors.

5. The Thirty-second Annual Series of Lectures to Teachers on "The Science and Art of Education," which commenced on February 25 with a Course of Twelve Lectures on "The Psychological and Logical Foundations of Intellectual Education," by W. E. Johnson, M.A., was concluded on December 15 with the last of a Course of Twelve Lectures on "Practical Applications of the Art of Teaching," by Prof. J. Adams, M.A., B.Sc., F.C.P.

6. At the Members' Meetings held during the past half-year, the following Lectures have been given:—"How to evoke a Taste for Reading and Continued Study after the Pupil leaves School," by the Rev. J. O. Bevan, M.A.; "On the Method of Teaching French after the First Stages," by F. B. Kirkman, B.A. At the November Meeting a Discussion was opened by the Rev. Dr. Scott on the subject of the New Geometry Teaching. Reports of the Lectures and Discussions have been published, as usual, in *The Educational Times*.

7. The Council have been invited by the Board of Education to express their views on certain Proposals for a System of School Certificates brought forward by the Consultative Committee. These Proposals provide for the examination of schools and the granting of Certificates to selected pupils; the intention being that these Certificates should serve to satisfy the requirements of bodies like the Medical Council, the Law Society, Banking Companies, &c., which control access to professional study or to employment. There are several remarkable features which distinguish the projected scheme from existing Certificate Examination Schemes. Inspection of the school is a necessary preliminary to the examination of the pupils. The Examination is to be conducted by examiners appointed by an external examining body in collaboration with members of the school teaching staff, who are called "internal examiners." The Proposals provide for the setting up of new Examining Bodies which

may include representatives of Local Authorities, and also for the establishment of a central controlling and co-ordinating Board. The Council have very carefully considered the Proposals, and have communicated to the Board of Education a detailed statement of their views; and, while agreeing that the scheme might be found useful as a method of school examination, they have pointed out certain serious objections to the issue of Certificates under the proposed system. It appears to the Council that existing examinations already fairly cover the field of secondary education, and that, if some means of controlling and co-ordinating these examinations could be devised, they could be completely adapted to the requirements of secondary schools and Recognizing Bodies; and they are of opinion that some effort should be made in this direction before elaborate and costly new machinery is set up. For this purpose they have suggested that a Conference Board should be established consisting of representatives of the Board of Education, of the Examining Bodies, of Associations of Teachers, and of Bodies which determine the preliminary requirements for admission to professional study or to business life.

8. The question of the Federation of the several Associations of Teachers concerned with secondary education has during the past half-year engaged the anxious attention of the Council. They recognize the great advantages that would ensue from a co-operation of forces at present divided, which would enable the collective opinion of secondary teachers to be available for the guidance of the authorities who have to administer both primary and secondary education. The Council thoroughly approve the principle of a union of forces, and have expressed their willingness to take part in such a movement, and to give it the support which the financial position of the College, the large extent of its work, and its position as a chartered corporation would afford. The Council have therefore given their earnest consideration to the proposals made to them from the outside, with a view to arrive at a basis of co-operation on just and reasonable lines. The difficulties of detail connected with such an attempt at amalgamation are not slight; and, before bringing the matter before the members at a Special Meeting to be convened for the purpose, the Council are taking the opinion of a high legal authority as to the possibility of obtaining such a modification of the College Charter as would enable the proposed Federation to be effected.

9. A special Committee of the Council has recently addressed inquiries to local secretaries and others connected with the College as to the way in which private and proprietary schools are being affected by the operation of the Education Act of 1902. The Committee has not yet reported, but many replies have been received, and from these, so far as they have been examined, it would appear that Local Authorities in some areas are inclined to ignore the spirit of that clause in the Act which enjoins consideration for the existing provision of efficient secondary schools before new rate-aided schools are established. On the other hand, it is gratifying to take note of the spirit of fairness which animates the action of certain of the Local Authorities, who are arranging for the inclusion of efficient private schools as part of the recognized machinery for secondary education.

10. During the first half of the year a new catalogue of the Library was prepared, and a copy was sent to every member in July. Since the publication of the new catalogue about 1,000 volumes have been issued to members.

11. The Council have been enabled, out of the surplus funds accruing from the regular operations of the College, to place the sum of £300 to the credit of the Benevolent Fund.

12. During the past half-year 19 new members have been elected, and notice has been received of the withdrawal of one. The Council regret to have to report the death of the following members of the College:—Rev. E. De Ewer, Mr. W. M. Jackson, Mr. W. Lamborn, and Mr. F. Pritchard, F.C.P.

Paragraphs 1 to 7 were adopted without discussion.

The CHAIRMAN said that, before the meeting proceeded to the consideration of paragraph 8, relating to the proposals for Federation, he thought it right to read a communication which the Council had had before them that day, and which had only been received the previous day. It was within the knowledge of the members that the Council, considering the great importance of suggestions made by outsiders with regard to matters contained in paragraph 8, had taken the best legal advice obtainable as to the way in which they might deal with their Charter if modification should be thought necessary. They had consulted the Right Hon. R. B. Haldane, K.C., M.P., who was a member of the Privy Council and a great legal authority, and they had also consulted Mr. T. T. Methold, a man who could not be surpassed for his legal acumen. The opinion was as follows:—

"The tendency of the times and the disposition to regard the qualification of teachers from a changed point of view appears to us to render it probable that the Lord President of the Council would not advise the grant of the proposed Charter, and we do not see that any amendment germane to the purposes of the present application could be introduced with the prospect of making success more likely. If however the applicants determine to proceed we see no legal difficulties which stand in the way of success. Such cases as the King

v. Passmore 3 Term. Rep. 199 show that if the majority of the Corporation desire a change it is within the competency of the Crown to grant a new or further Charter effecting it."

Mr. J. WILSON thought that the members of the College ought, in the first place, to have been consulted as to whether they desired any alteration of the existing Charter, and before counsel's opinion had been obtained. As to the opinion that had been expressed, he considered that it was not so much an opinion on legal points as on matters of policy. He commented strongly on the ambiguity of paragraph 8, and in order to clear up the matter he desired to put one or two questions, which perhaps the Chairman might answer:—(1) Had the Council come to the conclusion that the objects of the proposed Federation could not be attained under the existing Charter? (2) Was the proposed scheme of union one of federation or amalgamation? (3) What associations of secondary teachers outside had made proposals with a view to federation or amalgamation with the College? (4) Would teachers engaged in primary education be eligible in the future for membership of the College on the same terms as at present? (5) What funds belonging to the Corporation were available to support objects not within the purview of the present Charter? He contended that the Council had no power to act beyond the limits of the objects defined in the Charter from which their powers were derived. It was for the promoters of the scheme inside the College to take action if they thought fit, and not for the Council. If the Council were acting in contravention of the provisions of the Charter, the Crown might intervene and suppress it, on the ground of actual or apprehended public mischief. This being so, the next step was for those promoting the federation or amalgamation to summon a meeting of the members and put the scheme before them. It was a question of policy whether the members would entertain the scheme or not. They could not do away with the rights of the members, and every single member had the right to go to the Court of Chancery to obtain an injunction restraining the Council from proceeding with the business. He thought they were opening up litigation by the way they were proceeding, and it must not be forgotten that the minority could claim their rights and retain the accumulated funds, as had recently happened to the Church in Scotland. The whole matter bristled with difficulties, and he was amazed that these difficulties were not more fully appreciated. With regard to the second question, federation of course implied that each of the separate bodies preserved its own rights and privileges *minus* those that it gave up for the sake of the union which ought to be embodied in the federal compact, if such there were. Over these different managing bodies there would be superimposed a Council to carry out the federal compact. Who was to finance that federated Council? Amalgamation was quite a different thing, and involved the merging of each of the bodies into one body, when they could go forward with solidarity of interests.

The CHAIRMAN said he would endeavour to answer the questions that had been put by Mr. Wilson. The first question was as to the opinion of the Council about the Charter. This was a question of fact. All those who had taken a leading part in urging the advisability of securing co-operation, and, if possible, federation, between the various associations concerned with secondary education had expressed the opinion that, if such a union was to be brought about, it must be by means of an amended Charter. As to the second question, whether the proposed scheme was to be one of union or amalgamation, there had been both notions afloat—the notion of federation and the notion of amalgamation—and he believed at one time it was suggested that there should be an almost complete amalgamation of the various bodies for certain purposes. But the notion of federation was the one which the Council were disposed to regard more favourably. They pointed out, as Mr. Wilson had done, that the difficulties of detail connected with an attempt at amalgamation were not slight. The Council had considered those difficulties very fully, and it was in view of those difficulties that the paragraph had been so worded. He trusted that members generally were not in the same doubt as to the meaning of paragraph 8. It stated that the Council thoroughly approved the principle of a union of forces, and had expressed their willingness to take part in such a movement, and to give it the support which the financial position of the College, the large extent of its work, and its position as a chartered Corporation would afford. That meant, of course, giving it such support with the sanction of the members in general meeting. It was not proposed that the Council should, off their own bat, do anything which was so

described, but, with the approval of the members gathered together in general meeting, they saw no difficulty in furthering the movement. The Council had not yet got as far as to decide that federation was possible, and that a new Charter could be obtained. They had only considered the question, and approved of affording that support which the Corporation could give on an equitable basis. That was quite clear from the paragraph, and there was no desire either to be hasty in coming to a conclusion, or to check useful aspirations on the part of other bodies by standing in the way of federation, provided that the scheme received the sanction of the members of the College. With regard to question 3, the paragraph stated that the difficulties of detail were very great, and the Council, therefore, did not see their way to bringing forward a detailed scheme at the present time. A number of associations having to do with secondary education had approved—in a somewhat similar way as the Council had approved—of the principle of a union of forces, if it could be brought about. As to the fourth question, there was nothing before the Council of the College which affected the status of any members of the College, whether they happened to be primary or secondary teachers. They were bound by the Charter and the by-laws, and there was no proposition before them at the present time for altering the Charter or the rules. The Treasurer could answer question 5 better than himself; he did not know of any of the corporate funds which were available for the support of objects which were not defined in the existing Charter.

Mr. EVE said the Council were approached by a Federation Committee, on which were represented the Head Masters' Conference, the Head Masters' Association, the Head Mistresses' Association, the Assistant Masters and Mistresses' Associations, the Private Schools Association, and the Preparatory Schools Association. All these bodies sent delegates to a meeting, which came to the conclusion that they should approach the College of Preceptors on the matter of federation. The Council of the College considered the proposition, and a joint Committee consisting of members of the College Council and of the Federation Committee conferred as to the conditions that might be offered for the consideration of all the bodies concerned, and embodied these conditions in the form of an amending Charter, and that draft Charter had been submitted to Mr. Haldane and Mr. Methold, but the Council did not think it desirable to offer the matter for the consideration of the members until they could lay it before them in a definite and complete form. He thought they could hardly be said to have acted *ultra vires* in considering the question of amendment of the Charter, as every corporate body had the power to try and improve its own regulations. That was one of the things not specified in a Charter: it rather would go as a matter of course, that, if they thought proper to ask for an improvement in their Charter, they had a right to do so, and the Crown had a right to grant or refuse it.

Mr. PINCHES said it appeared to him that Mr. Wilson was mistaken in the view he took of the action of the Council. He did not himself intend to speak to the merits of the proposals that had been submitted to the Council, and he held no brief for those who were promoting the scheme; his sole duty was to promote the interests of the College so far as he could, and to watch over its welfare. But the movement was promoted by men whose names should command respect for the part they had taken in many of the educational movements of the day; and when the matter came before the Council backed by these names only two courses were open to them. They could either have declined to entertain the idea, or determined to give the matter preliminary consideration before submitting it for decision to the members of the College assembled in general meeting. The latter course was the one they had adopted. The Council had very carefully considered the proposals of the Federation Committee, and had secured certain alterations which would protect the interests of the College, supposing that a federation (for that was the right term) could be brought about. The Council next considered whether the time was ripe for bringing the matter before the notice of the members in general meeting, and they were unanimously of opinion that they should first ascertain whether it could be legally pursued. That seemed to him to be the natural and proper course, and he did not think that it would be the opinion of the majority of the members that the Council had deserved censure for what they had done.

By permission of the Chairman, Canon BELL, speaking as Chairman of the Federation Committee, gave the following information as to the proposals. First, as to the name. Two alternatives had been suggested for the new Body, viz., (1) "The College of Preceptors and of Secondary Teachers,"

and (2) "The College of Secondary Teachers, hitherto known as the College of Preceptors." Provision was made for admission to membership as follows:—(1) Persons admitted on an annual payment: viz., ordinary members of the College of Preceptors at the date of the amending Charter, secondary teachers registered in Column B of the Teachers' Register, and such other teachers as possessed the qualification required by the Corporation. (2) To be admitted without payment: Life members of the College of Preceptors, teachers in secondary schools who at the date of the amending Charter enjoyed the privileges of membership of the College of Preceptors and made application therefor, and persons who had been for ten years previous to the date of the amending Charter subscribers to the College of Preceptors. (3) Persons to be admitted on payment made on their behalf by public bodies according to an agreed scale. Provision was also made for the appointment of six trustees, in whom the property, both real and personal, of the reconstituted Corporation should be vested under certain conditions; and the Trustees were to be *ex officio* members of the Council of the Corporation. The Council was to include representative members in equal numbers from each of the federating bodies, and, for a time, twelve members, elected by the members of the existing College of Preceptors. Canon Bell then proceeded to speak on one or two points which he had heard mentioned in conferences he had had with members of different associations and in particular of the Private Schools Association. One question was, whether the Federal Council would be prepared to support the equitable claims of private schools. The promoters were certainly anxious to secure the same aid for private as for public schools under proper conditions. Other doubters demanded an assurance that the new Council would endeavour to restrict subsidies from public bodies to parents who were unable to afford the necessary fees for secondary education. Personally he would be willing to make such a regulation, but any one acquainted with the proposed constitution of the new Council would hesitate to pronounce an opinion as to their action on that point. Another question was whether the new Council would discourage State inspection, with its attendant dangers. All he could say was that any intelligent body of teachers must agree with the feeling that the freedom, variety, and elasticity of schools should be maintained as far as possible. He wished to draw serious attention to three points: (1) That in resisting encroachments of the State or Local Authorities (and the latter were to be feared more than the former) the Federated Council could speak with far greater weight than a crowd of separate bodies. (2) Federation would leave intact the freedom of each association to act independently in matters that concerned its own policy and interest. He would only add that the rejection of these proposals would finally destroy the promising hope of effecting such a union of secondary teachers as would do much to promote the cause of secondary education throughout England. The Private Schools Association would further their own policy if they consented to leave the new Federal Council with the influence of their opinion and experience.

Dr. FRY asked that, as Secretary of the Federation Committee, he might be permitted to say a word or two upon this subject. That Committee considered that a vast change was taking place with regard to secondary education in consequence of the recent Act; that the State, in fact, was stepping in; that, unless the forces of secondary education could somehow find means to federate, they might be left out in the cold, and that it was only by union that they could secure a reasonable measure of freedom and elasticity. The private schools of England would be the first to suffer from a lack of union. He was strongly of opinion that private schools, where they fulfilled the needs of their districts, ought to be supported, under proper regulations, by public money, and that they ought to be capable of earning grants just as much as public schools. That could only be secured to them in districts where they were strong, and not in districts where they were weak, except by the union of organizations of secondary teachers. For this reason he was anxious to see this proposal carried through. He believed that, when the full scheme was placed before them, the members of the College of Preceptors would recognize that every effort had been made, with the fullest possible sympathy of other bodies, to secure to every member of the College of Preceptors his full rights. The opinion of Mr. Haldane was to the effect that there was no legal objection, but he said that the drift of the times would make the Privy Council hesitate. If the members ultimately agreed that Federation was the right policy to adopt,

the tide would go with them, and the public would come to the same conclusion.

The CHAIRMAN said that he must now bring the members back to the consideration of paragraph 8. That paragraph described the attitude of the Council: it said that a scheme of federation had been considered by certain bodies; but that the Council had not considered it so as to present the members with any number of points on which they were agreed; and, although the Council recognized that there would be great advantages from organization, they contented themselves with the remark that approval might be given to the principle of the union of forces. They further said that they would be willing to co-operate in any reasonable scheme which had for its purpose the formation of a Federation; and that the Council had sought the opinion of legal authority. The paragraph also referred to a future meeting of the members to be called to consider the scheme; and he did not think there was any member present who would disapprove of the action of the Council so far.

Mr. SPRATLING said he should like to move that no scheme would be acceptable to the members which did not contain some means by which the whole teaching profession could be welded into one.

The CHAIRMAN said that could not be considered at the present meeting.

Mr. MILLAR INGLIS, in referring to paragraph 9, said that in Gloucestershire and Oxfordshire they had no scheme, and did not propose to take up a scheme, though in the majority of cases the Local Authorities had gone straight ahead, and especially in municipalities they had municipalized secondary education to the disadvantage of private schools. Sir William Anson had decided that no school not in the hands of trustees was able to receive an Imperial grant; and private schools were therefore excluded from participation in such grants, even although they might be approved by the Local Authority. The Report of the Royal Commission on Secondary Education stated that almost the universal testimony of the witnesses was that it would be a national calamity if private schools ceased to exist, and again, more recently Prof. Sadler, in speaking of the Birkenhead scheme, said that it was for the benefit of the community that private schools should be retained. The point he wished to make was this: that, although it was to the interests of the community, those interests were seldom regarded. Upon most of the Local Authorities there was no real representative of those interests of the community which favoured the retention of private schools. One scheme which he had seen placed all schools on the same footing. The Sunderland scheme provided for a great number of free places, and so did away with the necessity of assisting private schools. Another scheme took all efficient schools into it; it did not propose to give the schools money, but to aid them in certain ways. The three schemes were interesting, and he hoped the Committee would before long be able to give a careful and detailed report.

Mr. MAPLES, with reference to the statement of accounts accompanying the report, drew attention to the amount of arrears of subscriptions as compared with the subscriptions received during the year. He also drew attention to the very high expenditure for salaries, &c., and asked whether it would not be possible in future statements for the fees of the examiners and sub-examiners to be shown in a separate item. He also remarked on the loss upon *The Educational Times*.

Mr. WILSON said he noticed that many of the assets of the College were ear-marked for specific purposes, and he should be glad to know what would become of these funds under the federation scheme.

Mr. BROCKLEHURST asked whether the £20 paid as rent by the Joint Scholastic Agency included taxes, coal, and gas. The sum appeared ridiculous compared with the sums asked for similar rooms in the same street.

Mr. PINCHES, replying to Mr. Wilson, said it was not for him to say what would become of any money under any scheme of federation which was not yet approved, but care would be taken that the rights of the College, not only with regard to trust funds but other moneys, would be duly safeguarded. With regard to the rent paid by the Joint Scholastic Agency, the College had formerly conducted an agency itself without any charge to members, and when the Agency was established the College gladly welcomed it and gave every possible assistance, and they had the satisfaction of knowing that it was becoming a flourishing institution of great benefit to teachers. The Council were aware that £20 was not an adequate return as a matter of business. One speaker had stated that *The Educational Times* was not a paying concern. The member who made

that observation had overlooked the fact that the journal was sent post free to every member of the College. If those copies were paid for, the account would show a balance on the other side; but surely it was not the wish of the members that a flourishing College like theirs, with money at its command, should require this payment from its members? For his own part, he thought the accounts were unusually satisfactory. There had been large expenses incurred in preparing the new catalogue and in redecorating the premises—the two items amounting to about £400; but, after paying this sum, they had still sufficient over to enable them to add £300 to the corpus of the Benevolent Fund, and to carry over a larger net balance than they had ever done before. The assets and liabilities were also very satisfactory, because it must be remembered that the various funds were invested in what were called gilt-edged securities, which at the present time were much depreciated. They were estimated at the market value of the day, and even at the depreciated value they had a Reserve Fund of £2,200, formed from the compositions paid by life members. The Building Redemption Fund was increasing at such a rate that those who succeeded them at the expiration of the lease would have at their command a sum of money double that which had been expended on the building. The Teachers' Training Fund amounted to £2,400, and the Benevolent Fund to about £2,800, compared with £150, at which figure it stood seventeen years ago. Eventually they would have in addition a sum of £2,000, being the reversion of property left them by a former member of the College, Dr. Hopkins. The library and building had been valued at a very low figure, the building being put at half the money it cost, and on the whole he thought they might congratulate themselves upon being in a very sound financial position.

The report of the Council, together with the accompanying statement of accounts, was then adopted.

The meeting then proceeded to the election of twelve members of the Council to fill the places of the twelve retiring by rotation, and three auditors.

The Chairman having appointed Mr. SOUTHER and Mr. CHANDLER to act as Scrutators, the voting-papers were distributed, and the election was proceeded with. When the Scrutators subsequently presented their report, the following were declared to be duly elected:—

MEMBERS OF THE COUNCIL.

J. L. Butler, B.A., The Douglas School, Cheltenham.
 J. Easterbrook, M.A., Owen's School, Islington, N.
 H. W. Eve, M.A., F.C.P., 37 Gordon Square, W.C.
 Rev. R. Lee, M.A., Elm Grove Road, Ealing Common, W.
 Rev. G. E. Mackie, M.A., Grafton Lodge, Acton, W.
 Sir Philip Magnus, B.A., B.Sc., F.C.P., 16 Gloucester Terrace, W.
 Bishop Mitchinson, D.D., F.C.P., Pembroke College, Oxford.
 W. G. Rushbrooke, LL.M., B.A., 13 Cathcart Hill, N.
 A. P. Starbuck, B.A., St. John's College, Green Lanes, N.
 Rev. J. Stewart, F.C.P., The Manse, Felixstowe, Suffolk.
 W. Vincent, Loughton School, Loughton.
 R. Wormell, M.A., D. Sc., F.C.P., Roydon, near Ware.

AUDITORS.

J. Bell, M.A., LL.D., 4 Beatrice Avenue, Norbury, S.W.
 W. C. Brown, M.A., F.C.P., Tollington Schools, Muswell Hill, N.

The Dean presented his Report, which was as follows:—

THE DEAN'S REPORT.

IN addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Christmas Examination of candidates for Certificates took place on the 6th to the 10th of December at 229 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Aldershot, Anerley, Ashbourne, Ashford (Kent), Ashton-in-Makerfield, Bangor (Co. Down), Barnsley, Bath, Beckington, Bedford, Bewdley, Biggleswade, Birkdale, Birmingham, Blackheath, Blackpool, Blandford, Bognor, Bolton, Bournemouth, Bracknell, Braunton, Brentwood, Bridgwater, Brighton, Bristol, Burnham (Som.), Camborne, Cardiff, Carlisle, Cheltenham, Chepstow, Chertsey, Chiswick, Clacton-on-Sea, Clevedon, Coleford, Congleton, Coventry, Cowes, Crewe, Croydon, Deal, Derby, Devizes, Devonport, Doncaster, Dublin, Dumfries, Durham, Ealing, Earl's Colne, Eastbourne, Edinburgh, Elmswell, Evesham, Exeter, Fakenham, Farnworth (Bolton), Fraserburgh, Frome, Gosberton, Grantham, Gravesend, Great Ayton, Greenwich, Halifax, Halstead (Essex), Harlow, Harrogate, Hastings, Hereford, Herne Bay, Hornsea, Horsmonden, Hull, Ilkley, Inverurie, Jersey, Kibworth,

King's Lynn, Kingston-on-Thames, Launceston, Leeds, Lincoln, Liskeard, Liverpool, Llandudno, London, Loughton, Lytham, Maidenhead, Maidstone, Malmesbury, Manchester, Margate, Market Deeping, Marlborough, Morecambe, New Brighton, Newcastle-on-Tyne, Newport (Mon.), Newton Abbot, Northampton, Norwich, Nottingham, Ongar, Penketh, Penmaenawr, Penzance, Peterborough, Pinner, Plymouth, Portsea, Portsmouth, Ramsey (Hunts), Reading, Reigate, Richmond-on-Thames, Ripley (Surrey), Ryde, Saham, St. Anne's, St. Leonards-on-Sea, Sale, Sandwich, Scarborough, Selby, Sheffield, Shirley, Shoreham, Southampton, Southend, Southport, Southwold-on-Sea, Stamford (Lines), Staple Hill, Sudbury (Suffolk), Sunderland, Swindon, Tamworth, Taunton, Tettenhall, Torquay, Totland Bay, Wallington, Walton (Liverpool), Wanstead, Warminster, Warrington, Wellingborough, Wellington (Salop), Welshpool, West Norwood, Weston-super-Mare, Wigton, Winchcombe, Winchester, Winslow, Wisbech, Woking, Wokingham, Worcester, Worthing, Yarmouth, and York. The Examination was also held at Batticaloa and Colombo (Ceylon); Brockville (Ontario); Stewart Town (Jamaica); Nassau (Bahamas); Georgetown and New Amsterdam (British Guiana); St. George's (Grenada); St. Lucia and St. Vincent (B.W.I.); Port of Spain (Trinidad); Bloemfontein, Johannesburg, Kimberley, Klerksdorp, Krugersdorp, Potchefstroom, Pretoria, and Uitenhage (S. Africa); Abonema (Nigeria); Lagos; Mussooree (India); and Lomas de Zamora (Argentine Republic).

The total number of candidates examined (not including 545 examined at Colonial and Foreign Centres) was 5,596, of whom 3,611 were boys and 1,985 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined for Certificates during the year (not including those who attended the Supplementary Examinations in March and September) was 10,497.

The following table shows the proportion of the candidates at the recent Examination who passed in the class for which they were entered:—

	Entered.	Passed.	Percentage.
First Class (or Senior)...	496	241	49
Second Class (or Junior) ...	2,096	1,113	53
Third Class	2,661	2,019	76

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (343 in number) who entered only for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 317 examined at Colonial and Foreign Centres) was 1,823—966 boys and 857 girls. Of these 1,492 passed, or 82 per cent.

At the supplementary Examination for First and Second Class Certificates, which was held on the 6th to 8th of September in London and at the following Provincial Centres, viz., Alnwick, Birmingham, Bristol, Jersey, Leeds, Liverpool, and Manchester, 267 candidates presented themselves. The number of candidates examined at these supplementary examinations during the year was 611.

The Summer Examination of Teachers for the College Diplomas took place on the 30th of August and four following days in London and at the following Local Centres:—Alnwick, Birmingham, Blackburn, Bristol, Colchester, Inverness, Jersey, Leeds, Manchester, Newcastle-on-Tyne, Plymouth, West Hartlepool, and at Malta, Murree (India), and Worcester (S. Africa). It was attended by 445 candidates—221 men and 224 women. On the results of this Examination, 14 candidates obtained the Diploma of Licentiate, and 122 that of Associate.

The Christmas Examination of Teachers for the College Diplomas took place on the 2nd of January and five following days in London and at the following Local Centres:—Birmingham, Blackburn, Bristol, Falkirk, Jersey, Leeds, Manchester, Newcastle-on-Tyne, Plymouth, Rugby, Southbourne, Stornoway, West Hartlepool, and at Hankow (China) and Georgetown (B. Guiana). It was attended by 541 candidates—310 men and 231 women. On the results of this Examination 32 candidates qualified for the Diploma of Licentiate and 145 for that of Associate.

Practical Examinations to test Ability to Teach were held in February, May, June, July, October, and November. At these Examinations 71 candidates presented themselves. Of these 31 obtained Certificates, and 35 satisfied the conditions prescribed by the Teachers' Registration Council for candidates applying under Reg. 5 (2) (b).

The number of schools examined and inspected during the year under the Visiting Examination and Inspection Schemes (A), (B), and (C) was 12.

The College has also conducted certain Examinations for other Bodies.

Suggestions were made by various members for modifications in the examination papers, and the DEAN promised that the suggestions should receive consideration. The report was then adopted.

Mr. G. J. PASS moved the following resolution, of which previous notice had been given:—

That it is desirable that Higher History be an optional group in the Diploma Examinations, and that Higher English be accorded the full recognition of a group, instead of a subject as heretofore.

He thought that both higher English and History were subjects of special importance, and it was desirable therefore that teachers should be encouraged to study them. Such encouragement would be afforded if these subjects received a more prominent place in the scheme of examinations for the College Diplomas. It was satisfactory that higher English had received some recognition; but the more extensive requirements in this subject as compared with the examination in other modern languages suggested that it was entitled to be regarded as a group rather than as a constituent member of a group.

Mr. EVE said these questions might very fairly be left to the Examination Committee for consideration. English, even including all that had been specified in the regulations, was not more difficult than the languages with which it was grouped, and could hardly form a group of itself.

Mr. PASS expressed his willingness to withdraw the motion, which, by consent of the meeting, was accordingly withdrawn.

A vote of thanks to the Chairman concluded the proceedings.

ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

AN adjourned meeting of the Council was held on January 28. Present: Mr. E. A. Butler, Vice-President, in the Chair; Mr. Barlet, Mr. Baumann, Rev. Canon Bell, Rev. J. O. Bevan, Rev. J. B. Blomfield, Dr. Breul, Mr. J. L. Butler, Mr. Charles, Miss Crookshank, Miss Dawes, Mr. Easterbrook, Mr. Eve, Mr. Hawe, Mr. Kelland, Rev. R. Lee, Rev. G. E. Mackie, Dr. McClure, Mr. Millar Inglis, Mr. Pinches, Miss Punnett, Mr. Rule, Mr. Rushbrooke, Mr. Starbuck, Mr. Storr, Mr. Vincent, and Dr. Wormell.

The Secretary reported that the Christmas Examination for Diplomas had been held on the 2nd to 7th January at sixteen centres, and had been attended by 541 candidates. The Diplomas would be granted at the meeting of the Council in February.

The opinion of counsel on the question of the application for a supplementary or amending Charter, in connexion with the proposals for federation, was read, and it was resolved that it should be communicated to the members at the General Meeting.

The use of the College Lecture Hall was granted to the Assistant Masters' Association and to the Froebel Society for meetings to be held on February 18 and March 31.

TRADE SCHOOLS FOR SOCIAL BETTERMENT.

[From the "School Journal."]

At a meeting recently held in the interests of the Manhattan Trade School for Girls, addresses were made by Dr. Felix Adler, Robert C. Ogden, and William J. Schieffelin. The last presented a statement concerning the work of the school. It cost 26,000 dols. to conduct the school last year. Of this sum 10,000 dols. was devoted to students' aid. This means that a hundred poor families received 100 dols. each for allowing their children to be trained. This aid is given only to families who are in such circumstances that the income from the young worker is absolutely necessary.

Dr. Adler said in the course of his address: "This work, now in its incipiency, is destined to become a powerful factor in the social scheme, a strengthening of our commercial standing, a bettering of our working classes, a raising of our quality of work, and a means of solving some of our most difficult problems. Let this little school be perfected and schools of its kind will spring up everywhere. This work promises to do something in a direction in which civilization hitherto has been helpless. Factory workers in their present condition are drudges. The sordid monotony of it has created socialism. Take this same class, educate them to skilled labour, train them to know thoroughly all the parts of their trade, and you have a new generation. Everything tends to stimulate the mind and cultivate the taste and raise the grade of our products. You double, and in many cases treble, the wages of the worker. The Manhattan Trade School has placed at least double the wages originally received by every young girl it has taught. The whole scheme is eminently practical and yet ideal. It is a threefold work: intellectual, moral, and social—intellectual, because it makes the work of the hand stimulate the mind; social, because it reaches and uplifts the condition of one class of society; and moral, because it forms one of the strongest protections for young girls around whom temptation is so often thrown."

THE VALUE OF LATIN TO TEACHERS.

A COUNTERBLAST FROM CANADA.

By Prof. JOHN E. MCFADYEN, M.A. (Glas.), B.A. (Oxon.), Toronto.

[From the *Educational Monthly of Canada*.]

It is with much surprise and regret that I learn that there is a movement on foot in certain educational circles to reduce the emphasis which has hitherto been placed upon Latin as a qualification for the teacher's certificate. I am surprised, because to one who knows experimentally the discipline of Latin such an educational policy, however much it may be inspired by the laudable desire to be content with no teaching that is not relevant and useful, must seem to be essentially retrograde; and I profoundly regret the movement, because I cannot but regard this comparative indifference to Latin which the proposal suggests as significant of an indifference to elements that are of the very first importance to human progress. Though I have personally nothing to do, directly or indirectly, with the teaching of the classics, I welcome the opportunity which the pages of this widely circulated magazine afford me to say a word, however brief, in defence of a discipline whose importance it is only too easy to underestimate.

When we speak of Latin, we may think of it either as a language or as a literature. Most of those who study it probably never get beyond the consideration of it as a language: it is the few who know and appreciate it as a literature, for the simple reason that to know this, to know any literature or science well, takes more time than the ordinary boy or young man has to spare. But, to begin with, I should like to say that even to know it only as a language, and, even as a language, only very imperfectly, is supremely worth while. A little Latin is not a dangerous thing, but a very wholesome and helpful thing, and sometimes keeps a man from making a fool of himself. As a result of considerable experience in educational matters, on both sides of the Atlantic, I can confidently say that much of the mis-spelling which disfigures the work of nominally educated men—not even, I regret to say, excluding teachers and University graduates—is the direct result of ignorance of or inattention to the simplest facts of etymology, which could hardly escape the notice of any one who had had one or two years of proper training in the Latin language. It is difficult to see how men who have even a smattering of Latin should so maltreat their own mother tongue as to perpetrate such spellings as these: "accomodation," "indispensible," "incontrovertable," "infallable," "degredation." The tables cannot be turned by saying that men who do such things are not educated men; for they are—at least they are in the common acceptation of the term, though I am quite prepared to admit that that acceptation stands much in need of revision—revision, too, in the direction of renewed emphasis on Latin. Is it a small thing that a man should spell his own language correctly? Rather, is it not a disgrace that he should not? And this sureness is guaranteed even by an imperfect knowledge of Latin, as by nothing else.

One might also point out that to one who has even a very elementary acquaintance with common Latin roots, English words have a colour, a picturesqueness, and a richness of association, which they cannot possibly have to one ignorant of their origin. But I hasten over this interesting point to one of even more importance; for clearness of thinking is of even more importance than correctness of spelling and appreciation of the pictorial associations of words. Now, it is a simple fact, which would hardly be denied by any one who has ever written Latin himself or watched others write it, that the composition of Latin prose is one of the severest tests of the clearness and accuracy of one's thinking, and one of the surest means of securing this clearness and accuracy—qualities which are no less desirable in the discussion of social and political affairs than of things scientific. You cannot even begin to translate English into Latin until you have perfectly and lucidly mastered the thought you have to express. This is more or less true of all languages—especially of those whose idiom differs widely from our own; but it is peculiarly true of Latin, partly because the Latin language has a special genius for brevity. It is a language in which there are no words to waste. Every word tells, and therefore every word has to be weighed; and, if it is found wanting—that is, if it does not contribute to advance the thought of the sentence—it has to be rejected. It may be said that this ideal ought to govern all human speech. That is true; but the point is that it is pecu-

liarily characteristic of Latin. One never realizes how diffuse and verbose an ordinary piece of English is until one attempts to put it into Latin; and it will usually be found that the words of a Latin translation stand to the words of an English original in the ratio of about three to four. This is, of course, accounted for largely by the fact that Latin is an inflected language; but in great measure also by the further fact that it concentrates attention severely on essentials. Thus translation into Latin prose constitutes a mental discipline of the highest order; it is a good thing—good especially for those who are just learning to think—to be compelled to face an English sentence, to sift out the relatively unimportant things and place them into subordinate positions, and to throw the great idea which the sentence is designed to express into clear and striking prominence. Such an exercise teaches us to think both clearly and in perspective; and surely this is a great thing. Of course, no one would deny that this power could be acquired in later years by earnest concentration on almost any branch of study; but what I maintain is that, to the attainment of this power, no discipline is comparable to Latin, for those who are learning to think, or teaching others to think. This leads to the further remark that Latin teaches, as perhaps no other language can, the majesty of human speech. Greek may be subtle, and Italian musical; but the dignity of human speech reaches its height in Latin. It is what, in another sphere, the Romans themselves call gravity—a certain lofty, noble seriousness. It is not unimportant to emphasize this at a time when so much of the English that one reads is slipshod, trivial, and commonplace. There is to-day, no doubt, much clever and able writing; but not many writers seem to realize what a noble and beautiful instrument of thought human speech may be. One need have little hesitation in ascribing this circumstance to the decline of interest in the study of the classics. No man who had ever come into close and sympathetic contact with such writers as Virgil and Tacitus, no thoughtful boy in the upper forms of our schools who had had his attention wisely directed by a capable teacher to the niceties, precision, and nobility of their expressions, could ever be altogether slovenly again in the composition of his own language; at any rate, if he could be, it would be under the sting of a perpetual inward rebuke.

In all that we have said we have been dealing largely with the outside, but the last consideration carries us deeper. For the unquestioned and unquestionable nobility of Latin style is but the literary reflex of the nobility of the Roman spirit. In other words, a study of the literature—and it is to be presumed that a capable teacher would be able to inspire at least some sort of rudimentary affection for the literature in the hearts of his more responsive and susceptible pupils—a study of the literature carries us right into the study of humanity, and surely this is a study of undying interest. And it is here the proposal to reduce the importance of Latin as a qualification for the teacher's certificate, and to replace it by Nature study, seems to me almost pathetically unfortunate, because it is symptomatic of the tendency of the times to ignore the indefeasible importance of the spiritual element in education—using the word spiritual in the widest sense to cover literature and every other influence that touches the emotional or moral nature of man. Nature and her laws undoubtedly form a great and worthy study. In wise hands such a study might even be made to yield a contribution—and not an unimportant one—to religion. But, after all, the things that touch and move us most deeply are the things that come from other spirits like our own—the thoughts that breathe and words that burn. Our debt to the theoretical and practical scientists is immeasurable. Their discoveries are true revelations of God, and their genius has transformed the world. But, while science can do much, it cannot do everything; nor—and we say it with deliberation—can it do the deepest things. There are worlds into which we cannot be transported by any electric tramway or motor-car—worlds, too, which it concerns us, as spiritual beings, to inhabit. As a distinguished English scholar has recently said: "It is not in science that our true life consists. Provided some one knows how to make a pump or a telegraph, and some one knows what nebulae are made of and the properties of argon, this is all we want. It is not of importance to us as human beings that we should all have an independent knowledge of scientific results. We can leave them to specialists." But the spiritual life concerns us all. Man is always interesting to man, and has always something to learn from him for the development of his own deepest nature.

But, it may be asked, what has this to do with the study of Latin? Much every way. For the men who spoke the Latin

language were a great race—a race of imperial instincts, and of unexampled thoroughness in every undertaking, whether the building of a road or the organizing of an empire. They produced splendid orators, profound thinkers, tender-hearted poets, great lawyers, and mighty historians. It was through Latin that religion, to say nothing of literature, was kept alive in Europe through the darkness of many centuries. It was for long the familiar language of correspondence among educated men. It is the parent of many of the great languages of modern Europe, and the easy key to their literatures; and it has left an indelible mark upon the noble language which is spoken in the British Isles, throughout the continent of North America, and indeed almost everywhere that men gather together. Without some knowledge of a language which has had, and still has, so stupendous an influence on history a man can hardly call himself an educated man.

THE LORD CHANCELLOR ON CLASSICAL STUDY.

A PLEA FOR FREER AND WIDER READING.

THE Earl of Halsbury, in delivering his presidential address to the Classical Association at University College, London (January 7), disclaimed "any pretension to lecture or to assume the attitude of a professor"; he would rather put it that he was "initiating a conversation and suggesting a topic or two than delivering a thesis." After preliminaries, he said:

METHODS OF CLASSICAL TEACHING.

I did not have the privilege of hearing, but I have read with deep interest, Mr. Mackail's address on the place of Greek and Latin in human life; and I note that he thinks "there is much to be done in quickening the spirit and renewing the methods of classical teaching." There are few, if any, of us who would controvert that proposition; but we are immediately brought face to face with the question—how is that work to be done? We are agreed as to the object—we are not so clear about the means. It is an old remark that it is by mistakes we learn; and I venture to suggest that the main end will be best attained by familiarizing those whom we seek to influence with the objects of our study in such a manner as to awaken a human interest in them. When such an associated body as this is agreed in its object, and when I look at the names which I see counted among its members, I cannot doubt but that some progress may be made in the direction which we all desire. But may I drop a hint as to the tone and temper of the discussion which such questions are likely to raise? Among many interesting things which I read in Mr. Mackail's essay there was a quotation from Lord Bowen which is, I think, most appropriate to the topic which I am endeavouring to treat with a very light hand. I mean that passage in which Lord Bowen referred to the sort of proprietary rights in classic studies which some scholars seem to claim and the right apparently to warn off all others from approaching that sacred ground. Only the day before yesterday I read a letter from one whose learning and experience entitle him to be heard, conceived in a spirit, I think, of somewhat exaggerated pessimism. I do not myself think that compulsory Greek has been rendered injurious and ridiculous; and I must be allowed to doubt, notwithstanding my respect for the learning of the writer, that there is any class (I speak not, of course, of individuals) who "deliberately omit from the course of compulsory Greek all that constitutes scholarship or could give to exercises a humanizing quality. All information is excluded as to who the Greeks were, their history, influence, merits, and defects."

FREER INTERCOURSE WITH GREEK WRITERS.

Now, though I still timidly suggest exaggeration here, I do not mean to say that the jealous treatment of Greek literature in the sense that none but the very best models shall be presented to a pupil's mind has not been too rigidly insisted on, and that there might not well be a more diffused and more free intercourse with Greek writers, even if not the best specimens of Attic Greek. Few books are more amusing, and more amusing to a boy, than Herodotus, and assembled Greece loved him, though he was provincial enough in manner and dialect. What would be said of an effort to teach a man a good English style if he was never allowed to read anything but Bolingbroke or Addison? I know it will be said that in teaching you must have regard to accurate scholarship, and no one will undervalue accurate scholarship. But the question is not what will be ultimately reached, but what in the order of events is the best way to attain to that accuracy. Children, if they were not allowed to speak except upon strict grammatical rules, would be a long time in learning to talk their own language; and I suppose it is the experience of most people in learning a foreign language that, if they confine their reading to what would be called lessons for

children, their progress is slow. In truth, what I have quoted before is true here—by mistakes we learn, and a wider study of the Greek of a thousand years and more, I think, would excite a more real interest and create a more numerous body of students who would read Greek writers, not merely for an examination, but for the enjoyment derived from the reading itself. It is astonishing sometimes, when one speaks to those who have left their classics behind them, to note how narrow has been the curriculum, how sparse and scanty has been the dip into a language which, nevertheless, has such abundant and copious sources of interest. How many of such students have ever opened a book of Diodorus Siculus or Dion Cassius, or in the Greek of Plutarch, and even of Plutarch either in Greek or English, anything but the "Lives" in Langhorne's translations, or a single word of Athenaeus, except such as are found quoted by Mr. Mackail in some of his notes to those plays of Aristophanes which he has edited? Now consider what a man does when he is learning French, we will say, with a real desire to read and enjoy it. He seizes every book he can get hold of and every newspaper. He makes many mistakes, he misunderstands and forgets; but, if he perseveres, he learns where he has been mistaken, and his discovered blunder becomes a fixture in his memory. I know not how it may be now; but when I was in Oxford as an undergraduate a man might have a creditable degree and never read an oration of Demosthenes or any one of the *oratores Attici*. I hope I shall not make any of my hearers shudder when I even advocate the perusal of the Byzantine historians and even the Greek Fathers. One result of such studies is that the appetite grows by what it feeds on, and the general knowledge thus acquired sets at defiance the coach or the crammer, or whatever he is to be called, who sets himself to defeat the efforts of the examiner to test real knowledge. The Greek romancers and satirists—especially among the latter, Lucian—form almost a literature of their own; but I am at present only concerned with the suggestion that it is not only Thucydides and the dramatists who will give facility in, and taste for, reading Greek.

THE LATIN CURRICULUM.

I have referred to Greek, but it is only because the cry against Greek has been the loudest and most insistent. The narrowness of the Latin curriculum is still what one learns from those who have ceased to take any interest in Latin literature. Horace and Virgil, Virgil and Horace, how many have read or heard of the "Quaestiones Naturales" of Seneca; and how many, but for the exertions of Mr. Rowe and Mr. Justice Ridley, would have read Lucan's "Pharsalia"? I think Sir Walter Scott tells a story of a Jacobite who had effected his escape from captivity while under a charge of high treason, but was recaptured when he returned to get back a copy of Livy which it had been the delight of his life to read and which he had left behind. I fear there are not many now who would risk their life for a copy of Livy; and Sir Walter expresses his grief that his hero's classic tastes were not found a sufficient justification for high treason. I do not deny that what I have suggested might seem to make too little of the accurate scholarship which it has been the glory of the English universities to attain to; but, as I have already said, it is only the order of events upon which I am insisting. Let a man learn to read Greek or Latin with facility, and it will soon be with enjoyment, and, if with enjoyment, then with gradually advancing accuracy. All I say is that, if you wish for complete accuracy at first and teach the *nuances* of Greek grammar before the pupil knows anything of the language, you run the risk of doing what I saw a gentleman said had occurred to him when discussing this subject—that he had hated Greek for the rest of his life; and, after all, we are not dealing with those who are to become Bentleys or Porsons or Prof. Jebb or Prof. Butcher, but with people who, short of that standard of learning, may take a real and lively interest in classic literature and hand over the lamp to others in their turn.

THE STIMULATION OF INTEREST.

One other topic, which I would approach in the same spirit of suggestion rather than of dogmatic assertion; and I would like to make the suggestion by way of parallel. Every one recognizes that, if you were reading a novel, the connexion of the events that the narrator suggests and the gradual development of the story create and sustain the interest of the reader; but, if you dislocate and disfigure the relation of the events to each other, you deprive the narrative of its chief attraction. Let me take an illustration. Suppose you are teaching the boy to read Cicero's "Second Philippic"—that which Juvenal described as of divine fame—the interest of the events between the murder of Caesar and Cicero's own murder by Antony is what lends to that oration its deep and even thrilling interest; and, without what I will call the context of that comparatively short interval, the life of Cicero, the intrigues of Antony, Cicero's "First Philippic," a tentative and even timid remonstrance against Antony, Antony's ferocious attack, and then Cicero's "Second Philippic," which sealed Cicero's doom, present a picture of political intrigue and of violent conflict which a boy would be dull indeed if, when presented to him in this form, he did not learn to read with avidity and interest. And, as part of what I have called the context, Cicero's "Letters,"

edited by Mr. Albert Watson, formerly Principal of Brasenose College, Oxford, would supply materials for developing the story. I give this only as an illustration; many more might be adduced; but I cannot forbear from adding that Mr. Watson's book and the latest account—published, I think, only last year—of the state of Rome between Caesar and Nero might be, indeed, an answer to the supposed decay of scholarship among us. But I have said enough in the way of hint and suggestion—I do not profess to do more—and I will only conclude with what Horace has said:

"Si quid novisti rectius istis
Caudidus imperti; si non, his utere mecum."

TECHNICAL EDUCATION:

ITS MONEY VALUE.

By A UNIVERSITY LECTURER.

[From the *Electrical Review*.]

In a recent issue of the *Electrical Review* there appeared an interesting diagram showing the value of a good technical education to the American youth. Almost simultaneously a reliable educational expert in England published some telling figures. An uneducated child, in this age of competition, has one chance in 150,000 of attaining distinction as a factor in the progress of the age. A common school education increases his chance about four times; an education at a high school gives the child eighty-three times the chance of his less fortunate and uneducated rival in the battle of life. A college education increases the chance of the high-school boy nine times, thus giving him eight hundred times the chance of the untrained. So much for the general chances of success in the various walks of life.

There is a common superstition among people who have but little to do with educational affairs that "genius will always shine," and that, whatever the obstacles placed in the path of the really clever youths, they will always of themselves forge ahead. But there was never a greater fallacy. Genius, and even cleverness, is a hot-house plant that requires culture and protection. It can seldom survive a struggle for the bare necessities of life. The drain of an active mentality, if insufficiently supported by careful attention to the body, will tell a sad and pitiful story, and oftentimes a bright lad loses the chance of his lifetime because his people cannot afford to keep him at college.

Here is a case in point. At a certain university in Great Britain there were two engineering students. They worked side by side for two years: A. was first of his year in many subjects; B. was always second, except in the few subjects in which he proved that he was a better student than A. And at the end of the two years' arduous, but never irksome, work both A. and B. came with long faces to a lecturer, and told him that they must both go out into the world and earn their own living. But the lecturer was sad, for he saw in these two engineers—that-were-to-be two good men. And he told the pitiful story to his chief, who was also sorry, but did not quite see what to do. There were no scholarships for which the youths were eligible, although at the technical school in the same city there had been spent something like £100,000 by the City Council, who had provided no scholarships for the University. Now the lecturer consulted his fellow lecturers and demonstrators, all of whom were earning, perhaps, one-fifth of the salary of the Professor. But, although they, too, were immersed in research work, yet they were very sympathetic with those who struggled hard to learn, for their own paths had been none too smooth. And so these few put aside, maybe, one-tenth of their yearly income in order that the fees of either A. or B. for a third year might be paid. And they argued it out, at length, that B., who was less clever than A., should have the advantage. And they obtained for A. a post at 30s. a week after his two years' training at a university and his two years' shop experience, and in four years A. is worth about double that salary; so says his employer. But that same employer had B. to work for him (after his three years at a university) on higher-class work, such as testing; and B. has done splendidly, earning at present more than twice A.'s salary. For the employer selected B. because of his greater knowledge.

There is a still sadder aspect. A. is compelled to do routine work; B. has full scope for his originality. They have taken two different paths now; A. will never catch up to B. And yet A. went to evening technical schools—he tells me that he used to almost fall asleep sometimes—and has honestly done his best.

It is only in recent years that there has been any real provision

for training engineers outside of the Admiralty training schools; and the money value of their education to those students who were fortunate enough to pass through the Royal School of Naval Architecture is apparent, for we find them holding some of the most responsible positions in engineering work. About fifteen months ago, Mr. Alfred Morcom approached some of the old students of this school with the idea of meeting each other, if only for an evening. And what a gathering that was! How it showed the money value of the education of these men! Take a few of the names of those present:—Sir William White, Sir Nathaniel Barnaby, Sir E. J. Reed, Mr. Philip Watts, F.R.S. (Director of Naval Construction), Sir John Durston, Prof. Elgar (of Fairfield Shipbuilding Works), Mr. Pratten (manager of Harland & Wolff), Mr. Seaton (late of Earle's Shipbuilding Yard), Mr. Alfred Morcom (of high-speed engine fame), Mr. Milton (chief engineer-surveyor to Lloyd's), and several others equally well known. How Prof. Unwin must have felt a pardonable pride as he looked round upon his old pupils who were there before him to show the value of an engineering education!

Few people connect the sudden rise of Japan with such a secondary subject as education. But that famous statesman the Marquis Ito says that the success of the fleet and the army has been almost entirely due to the college which he was instrumental in founding some years ago in Japan. It is now the University of Tokio. Even our own Admiralty acknowledge that it is upon the mechanical training of the officers and men, rather than the number of ships, that the efficiency of the Navy depends. Napoleon used to say: "In war men are nothing—a man is everything," and we all know of his ceaseless training in military affairs. In an engineering works the trained man is everything—the other men are machines.

There is, fortunately for English engineers, a wave of feeling in favour of better colleges and training grounds for the younger generation of our profession. Quite lately the writer was in Birmingham, and saw how lavishly they have spent money for applied science. Prof. Turner, in the Metallurgical Section, told him how one building with its equipment for his work (there will be other metallurgical laboratories) cost £10,000, and they told me in the Midland city that there would be spent, for applied science only, nearly half a million pounds sterling, in five or six years. It is a good investment. Ask the people in Manchester whether the School of Technology has done the city any good. In a few years you will know of the good work which the London polytechnics and colleges are doing. For of all these places "by their fruits shall ye know them."

CORRESPONDENCE.

[We do not hold ourselves responsible for the opinions expressed by our correspondents.—ED. E.T.]

REGISTRATION OF TEACHERS, COLUMN B.

To the Editor of "The Educational Times."

SIR,—You are no doubt acquainted with the fact, sufficiently notorious, that assistant masters in the public schools and the larger grammar schools have shown no great anxiety to get their names entered on the Register of Teachers. In view of the early expiration of the "days of grace," may I call your readers' attention to the following facts?—

In consequence of the passing of the Education Act, some modification has become necessary in almost every scheme governing any endowed school in England. However trivial the modification may be, if it only adds, say, a single representative governor, it gives the Board of Education the opportunity of adding whatever "clauses of common form" are fashionable at the moment. Now among the clauses in favour just now is one that runs: "The head master (to be appointed) shall be a graduate . . . &c., and shall be a registered teacher."

Thus it comes about that for the future practically no head masters will be appointed to endowed or municipal schools in England who are not registered teachers, and so all secondary teachers of standing ought to see that their names get on the Register in the course of the next few months.—I am, Sir, &c.,

Wigan Grammar School,

G. C. CHAMBRES.

January 17, 1905.

REVIEWS.

HELPS TO THE STUDY OF GREEK.

A Companion to Greek Studies. Edited by Leonard Whibley, M.A. (18s. net. Cambridge University Press.)

A few glances at this long expected and welcome volume should go some way to reassure such as are concerned for the maintenance of the study of Greek. The Syndics of the Cambridge University Press are to be warmly congratulated on the conspicuously successful accomplishment of their project of presenting in a single volume such information as is likely to be most useful to the student of Greek literature, apart from the ordinary matters available in histories and grammars. Mr. Whibley, the editor, has secured the assistance of thirty other specialists of acknowledged distinction in their several subjects. The plan of the work is analogous to that of Mr. F. P. Barnard's excellent "Companion to British History (Middle Ages)," recently published at the Clarendon Press and duly commended to the attention of our readers; but it is even more comprehensive and on a larger scale. It surveys Greek life, thought, and art in their different branches, with special chapters on important collateral matters. First, the Geography, and the Fauna and Flora, are fully treated, by Mr. H. F. Tozer and Canon Tristram respectively. Next, the History—chronology, generally, with elaborate chronological tables down to the Roman domination—by Mr. R. D. Hicks. Then a spacious handling of the Literature by Prof. Sir Richard Jebb, of the Philosophy by Dr. Jackson and Mr. R. D. Hicks (Dr. Jackson expounding the Schools to Aristotle in masterly fashion), and of Science by Dr. Gow. Sir Richard Jebb stops short when "Hellenism gave place to Byzantinism," and for ordinary purposes he has gone far enough; yet we should have welcomed a page or two upon the Byzantine period. Art in half a dozen forms is treated by the late Dr. F. C. Penrose, Dr. Waldstein, Prof. Ridgeway, Mr. R. D. Archer-Hind, and others. Mythology and Religion receive a very luminous handling by Prof. E. A. Gardner. The Public Antiquities fall under a dozen heads: the Constitutions, by Mr. Whibley; Law and Finance, by Mr. Wyse (fresh from the Attic orators, and particularly Isaios); Population and Slavery, by Mr. R. J. G. Mayor; Colonies, and Commerce and Industry, by Mr. H. J. Edwards; Measures, Weights, and Money, by Prof. Ridgeway; War, by Prof. Oman (the only Oxford contributor, we think, except Mr. Tozer); Ships, by Mr. A. B. Cook; and the Calendar, by Dr. Gow. The Private Antiquities are distributed under nine heads: Education being expounded by Dr. A. S. Wilkins; Daily Life (surroundings, employments, and amusements), as well as House and Furniture, by Prof. A. E. Gardner; and Books and Writing, the Position of Women, Dress (by Lady Evans), and Medicine, by other writers of special knowledge. The final chapter contains several important sections of information not always readily accessible: especially interesting are the articles on Palaeography and Textual Criticism, by Dr. Rendel Harris and Sir Richard Jebb respectively: indeed, in both sections the crucial points might well have been more fully exemplified. Other articles in this chapter are on Dialects (Dr. Neil and Dr. Giles), Epigraphy (Mr. E. S. Roberts), Metre (Dr. Verrall), and the History of Scholarship (Dr. Sandys). The completeness of the scope is obvious. The excellence of the work is guaranteed by the names of the contributors. The volume should be on the Greek library shelves of every school where Greek is seriously taught. Not for reference merely; it will be read with avidity, apart from task-work, by any boy that has the root of the matter in him. There are 5 maps and 141 excellent illustrations; and the book is beautifully printed and produced.

OUR GLORIOUS CONSTITUTION.

(1) *The Governance of England.* By Sidney Low, M.A. Balliol College, Oxford; late Lecturer on History at King's College, London. (7s. 6d. net. T. Fisher Unwin.) (2) *Democracy and Reaction.* By L. T. Hobhouse. (5s. net. T. Fisher Unwin.)

(1) Mr. Low has revived an ancient title of honour more than four centuries old, and has given it a broad scope of which Sir John Fortescue never dreamed or could have dreamed. Indeed, it is very remarkable how different his work is from the more cognate essay of Mr. Bagehot, which dates scarcely half a century back, so rapid have been the comparatively silent changes in the government of the country. The constitution is unwritten. It

has not been built; it has grown. There has been no compulsion to make a formal revision and to recast it in a mould specifically representing the facts. "So we have carefully avoided systematization; we provide for immediate necessities; and we are content with a constitution which has been found to meet our practical requirements, though it is partly law, and partly history, and partly ethics, and partly custom, and partly the result of the various influences which are moulding and transforming the whole structure of society from year to year, and one might almost say from hour to hour." The constitutional history of theory and of the text-books is not to be neglected, but its significance will be little appreciated without an understanding of the practical working of the system; and this is what Mr. Low has delineated with ample knowledge, acute insight, and conspicuous ability and fairness.

The Cabinet is the most astonishing of all the curiosities of government among a people that pride themselves upon their practicality and insist on the open door in the transaction of public business. Historically and (so far as it has any separate legal existence) legally but a Committee of the Privy Council, conventionally the responsible executive, though not recognized in any official document till (probably) four years ago, the Cabinet is actually a secret (not merely a private) Committee—its most famous historical parallel being the Venetian Council of Ten—selected by one member of one party in Parliament from among other members of the same party, servants of the Crown at the same time as they are servants of the nation, and for the time being practically absolute managers of the whole system of the Empire, yet, keeping no records of their proceedings. Nay, "if we peer below the surface of things a little closer, we might even conclude that its chief functions have passed from the Cabinet as a whole, and that they have been transferred to an inner council or conclave consisting of the Prime Minister and the three or four influential colleagues who share his confidence and are habitually consulted by him." Mr. Gladstone constantly professed the theory of complete ministerial subordination to the House of Commons as "the cardinal axiom" in the modern British constitution; it would be well, then, for the members of that body to note carefully the actual tendencies of the system. Mr. Low writes:

If we did not know that the Cabinet system not only existed, but was in practice extremely efficient, we might deem it a fantasy as strange as any conceived in the brain of a philosophical visionary. It might seem the nightmare of a satirist, the burlesque of an Aristophanes or a Rabelais, that the laws of a country should be made by a big, miscellaneous public meeting, composed for the most part of rather idle men, who were not paid for their services, and who attended or stayed away as they pleased; that the chief functions of actual rule, the command of fleets and armies, the protection of life and property, the direction of foreign policy, should be entrusted to the nominees of rather more than half this meeting, and that they should perform their duties subject to constant molestation and attack from the other portion; that the administration of this country should be carried on in a manner extremely distasteful to perhaps a third or nearly a half of its inhabitants; that the Government should be elected for an indefinite period, as the result of a sort of plébiscite; that it should consist of a secret Committee; and that its members should be rewarded or punished, not for their own acts, but for those of their colleagues, so that a minister who had managed his department well might be deprived of office because another minister had managed his badly. Fantastic as these attitudes must seem when badly presented, they do, in fact, belong to the essence of our polity, in its present phase.

Mr. Low reviews in the same incisive fashion the functions of the House of Commons, the House of Lords, the position of the Monarchy, the Electorate, the working of the Parliamentary system, and the influence of the personal and social element in English politics. The text-book theory casts dust in the eyes at every point: "account should be taken of the extent and real character of the responsibility of ministers; the relations of the members of the Cabinet to one another and to the Prime Minister; the development of the party system; and the diminished power and importance of the House of Commons as compared with the Ministry on the one hand and the Electorate on the other. The last is the most significant feature in our recent political evolution." Mr. Low concludes that "representative Government, like the constitutional Monarchy, is still on its trial," and that "it has yet to prove its complete capacity to deal adequately with the novel problems before it"—notably the problems that may be generally classed as "Imperial," but also many of the social questions that are steadily emerging and growing insistent. One may hope vaguely that the difficulties will be met by the processes of adaptation and adjustment that have hitherto tided

us over grave situations; but probably it will be advisable to make the earlier adjustments provide for a fuller supply of brains in the governing coterie, even after devolution has done its utmost. The volume is based less on the acquirements of the Balliol man and the lecturer on history than on the prolonged experience of the practical, instructed, and thoughtful journalist. Neither students of the constitution nor politicians of whatever class or colour can afford to neglect it. The style is perspicuous, fluent, and agreeable; and the interest is absorbing throughout.

(2) Mr. Hobhouse, another of our most cultivated and thoughtful publicists, is concerned about the symptoms and causes of the reaction that has been manifesting itself during the past quarter of a century in different departments of thought and action. He sets out in its proper light the position of Cobden and his school; traces the rise of "Imperialism," and analyzes the Imperial idea; examines the forces of the intellectual reaction in diverse forms and modes of operation, and notably the influence of the biological conception of evolution; and pursues various lines of inquiry tending to "a truer view of evolution" as "exhibiting the attempt to remodel society by a reasoned conception of social justice as precisely the movement required at the present stage of the growth of mind." Mr. Hobhouse is of the Liberal vanguard: but for all that he inquires ruthlessly into "the limitations of democracy," and his exposition and argument claim sober consideration at the hands of thinking men of whatever political complexion.

ELECTRICITY IN GASES.

Conduction of Electricity in Gases. By J. J. Thomson, D.Sc., LL.D., Ph.D., F.R.S., Professor of Experimental Physics in the University of Cambridge. (16s. Cambridge University Press.)

Prof. J. J. Thomson and the school of physicists he has created have shifted the centre of gravity of physical research from the Continent to this country. The Mecca of the physicist is no longer Berlin: it is now Cambridge. This volume contains a masterly exposition of the most important results achieved in recent years by Prof. Thomson and his pupils. The views of the constitution of matter here revealed were hardly dreamt of by the physicist of fifty years ago. The beginning of the nineteenth century was distinguished in the history of physics and chemistry by the discovery of the atom by Dalton; the end of that century will always be distinguished by the still more remarkable discovery by Prof. Thomson that the atom, under certain conditions, can be split up into a thousand or more corpuscles. The discovery of the negatively electrified corpuscle has completely revolutionized molecular physics, and is intimately connected with the conduction of electricity in gases. Electricity, according to the new theory, can pass through gases only when it is carried by material particles known as ions. The old idea of an electric current as a subtle fluid passing through the solid substance of a conductor has been swept away.

The ion, which is so often mentioned in this work, has long been known in the theory of electrolysis, and is now shown by Prof. Thomson to play an equally important part in the conduction of electricity in gases, while it also gives explanations of many hitherto mysterious meteorological and cosmical phenomena. The ion is a particle of matter with either a positive or a negative electric charge. The particle of matter may be a corpuscle or an atom or a group of atoms, according to circumstances, but its constant characteristic is that each ion possesses an attraction for another ion with an electrical charge of opposite sign. The corpuscle is the smallest known particle of matter, having a mass only one-thousandth part of the mass of an atom of hydrogen, and has always a negative charge. This corpuscle was first discovered by Prof. Thomson in the cathode rays, but it has since been discovered also in the rays given off by radium and other radio-active substances. The particle of matter associated with a positive charge of electricity is never less than atomic size.

One of the most interesting applications of the ionic theory is to the explanation of meteorological phenomena. It has been shown, chiefly by the labours of Elster and Geitel, that free positive and negative ions exist in varying amounts in the atmosphere. Now Wilson has shown that when air approaches its saturation point these ions form nuclei for the condensation of moisture. Aiken, many years ago, showed that particles of dust acted as nuclei, which is quite true; but what the ionic theory added to this is that after all dust particles have been removed the negative ions will assume the function of the dust particles, and, finally, the positive ions will take the place of the

negative ions. We learn from the present work that incandescent carbon gives off negative corpuscles. The Sun's atmosphere contains large masses of incandescent carbon, and must be continually emitting a stream of negative corpuscles. These corpuscles, whose progress is assisted by the light-waves from the Sun, strike the rarefied upper atmosphere of the Earth, flow along lines of magnetic force towards the poles, and produce the striking phenomena of the Aurora Borealis.

These are only a few examples of the new light thrown on many phenomena by the investigations so clearly described in this remarkable work. The highest qualifications of the mathematical and the experimental physicist have rarely been so happily combined as in its author. The chapter on the Roentgen rays is a fine example of this combination. The explanation of the discovery of Roentgen for long defied all the efforts of physicists. The experiments of Prof. Thomson and the mathematical skill of Stokes have now apparently completely solved the puzzle, and bound together in a logical theory the formerly inexplicable properties. The electric spark—which on a large scale is the lightning flash—has new light thrown upon it by the ionic theory. A great advance, in fact, has been made in all directions in the understanding of the phenomena of atmospheric electricity. Mountain sickness, for example, has been shown to be due to an excess of positive ions near the tops of mountains.

This work ought to be read and studied by every one that desires to keep abreast of the times in physical science. Here will be found much that has not yet made its appearance in the ordinary school text-books.

THE END OF THE OLD RÉGIME.

From the Monarchy to the Republic in France, 1788-1792.

By Sophia H. MacLehose. (6s. net. MacLehose.)

Miss MacLehose narrates concisely and clearly the story of the struggle between the nation and the Crown that ended in the fall of the old French Monarchy. She confines herself very closely to the events that took place at Versailles and in Paris—the immediately determining events; and she holds fast to the evolution of effect from cause without turning aside to formal descriptions of the turbulent scenes of the period. She has thus followed the plan of her previous admirable account of "The Last Days of the French Monarchy." The result is, of course, to leave much unsaid, but also to say the essential things in a simple and effective way. The course of the evolution of events in those four momentous years is set forth clear of the multiplicity of distracting details, so that there could hardly be a better introduction to the history of the great movement. The book has manifestly been written with most patient care and thoughtfulness on a basis of ample knowledge of the best and the latest authorities. There are more than forty very pertinent illustrations, and the volume is excellently printed and got up. With Miss MacLehose's two volumes and Mr. Edward J. Lowell's "The Eve of the French Revolution" (published by Messrs. Houghton, Mifflin, & Co., a dozen years back) the student will be fully equipped to tackle the great histories without embarrassment and with immediate advantage.

GENERAL NOTICES.

CLASSICS.

Murray's Small Classical Atlas. Edited by G. B. Grundy, M.A., D.Litt. (6s. John Murray.)

Dr. Grundy's new atlas consists of 14 maps disposed so as to cover effectively the ancient lands of the classics, one of the sheets containing 14 plans of famous battlefields. He again uses coloured contours, bringing into necessary prominence the natural features of the countries, and he has taken care to print the names in a specially clear type. The index is very full. Schoolboys of these days do not know how fortunate they are in having such an excellent atlas to guide them.

Bell's Concise Latin Course. By E. C. Marchant, M.A., and J. G. Spencer, B.A. (2s. George Bell.)

The three parts of the original Course are compressed into one volume. The essentials of the grammar stand out distinctly, and the exercises have been cut down; and at the same time the more rapid advance in grammar gives space for further exemplification of the simpler subordinate sentence constructions. The volume is carefully graduated; the matter is interesting; and there are full vocabularies and indexes. An excellent first book for older pupils, or for pupils not pressed for time.

Longmans' Latin Course. Part III. By W. Horton Spragge, M.A. (3s.)

The work forms "a stepping-stone to the writing of Continuous Latin Prose." The chief points of construction are systematically explained with brevity and clearness; special attention is given to idioms; the exercises are careful and sufficient (none of them recapitulatory); and there is an ample vocabulary. A sound and attractive book.

Exercises in Latin Prose. By G. G. Ramsay, LL.D., Litt.D., Professor of Humanity in the University of Glasgow. (2s. 6d. Clarendon Press.)

The completion of the School Edition of the author's well known "Latin Prose Composition, Vol. I." In selection and treatment the volume is thoroughly practical, judicious, and effective.

We welcome a second and enlarged edition of the *Roman Law Examination Guide for Bar and University*, by W. Addington Willis, LL.B., and David T. Oliver, LL.D., Barristers at Law (8s. 6d., Butterworth). Though cast in the form of question and answer, it is very readable; and for elementary instruction it is reasonably full and representative on the more important matters. But it ought not to be confined to law students: it would be very helpful to classical students on many points on which they are apt to go astray, and we do not know any more lucid and safe guide in small compass for general readers that wish an easy outline of the Roman Law.

MATHEMATICS.

The Story of Arithmetic. By Susan Cunnington.

(3s. 6d. Swan Sonnenschein & Co.)

Miss Cunnington traces "for learners of school age and general readers" the most interesting history and development of arithmetic. Those that puzzle over figures will find that the story of the art of computation has many elements of romance, and Prof. Hudson, who furnishes a brief preface, and ought to know, affirms that it is "also an aid to further progress." Progress in the past, indeed, has been slow: habit has been too strong, and ignorance has encouraged habit. But "we moderns do more in our heads, less with our fingers," and "the progress of the art is to be sought in bringing written processes more closely into accord with mental operation, even if they thereby deviate more widely from mechanical." Who invented arithmetic? Miss Cunnington cannot give a short and concise answer. But "the first calculation was, no doubt, that of I and 1," and "many centuries passed" before men grasped "the abstract idea that one and one are two." She has much curious matter about ancient and mediæval arithmetic and about Old English (sixteenth to eighteenth century) arithmetic books—not forgetting the immortal Cocker (1700)—with fuller treatment of later works and methods down to "A Modern Text-Book." Nor must we forget the absorbing chapters on Folk-Lore in Arithmetic, Shakespearean Arithmetic, and Arithmetic in Modern Literature. Appropriately enough, the book ends with problems, "ancient, mediæval, and characteristic," and questions and exercises. There are 7 diagrams. A laborious, careful, useful, and most interesting work.

Elementary Geometry. Parts I. and II. By Cecil Hawkins, M.A. (2s. each. Blackie.)

The work deals both theoretically and practically with elementary geometry, discussing the straight line, the circle, and plane rectilinear figures. The subject of ratio and proportion is also included, and is followed by a treatment of the theory of similar figures. Incommensurable magnitudes are not introduced. The course is intended to cover rather more than the syllabus for the Cambridge Previous Examination. In many respects the text-book is a good one, but it requires considerable revision in order that what is clear to the author may always be equally so to his reader. Moreover, many of the constructions are marked by the want of mathematical precision which is noticeable in so large a proportion of the newer school treatises on elementary geometry; and often there is no attempt made to demonstrate theoretically the validity of the methods adopted for the solutions of problems.

Practical Geometry for Beginners. By V. le Neve Foster and F. W. Dobbs. (2s. 6d. Macmillan.)

A large and very useful collection of graduated exercises. The early sections are designed as a preliminary course in geometry, being devoted to elementary work of a purely practical character; later, both theory and practice are supposed to accompany each other, whilst the concluding portion of the volume consists of a series of miscellaneous exercises together with an attractive introduction to the art of constructing geometrical patterns. In the entire work there is very little that deals with matter beyond what is included in the First Book of Euclid.

Plane Trigonometry. By James M. Taylor, A.M., LL.D. (3s. 6d. Ginn.)

A thoroughly useful little book suitable for junior students. The subject of the text and the manner of imparting it are equally good. The principles are illustrated by a series of clear diagrams, and are applied to a number of worked examples, scope for practice being afforded by the usual complement of exercises.

Messrs. Macmillan issue a second edition of *A School Geometry, Parts I-VI.*, by H. S. Hall, M.A., and F. H. Stevens, M.A. (4s. 6d.). The volume contains Plane and Solid Geometry, treated both theoretically and graphically, and is undoubtedly one of the best text-books on the subjects.

Messrs. Bell publish a second edition of *Arithmetical Examples*, by W. G. Borchardt, M.A., B.Sc., without answers (3s.). There have been added five new sets of examples of an easy problem type on the first four rules, compound rules, vulgar fractions, the metric system, and percentages, and also a large number of easy oral questions. A very serviceable collection.

Messrs. Chambers publish separately Part I. of *Elementary Pure Geometry with Mensuration*, by E. Budden, M.A. Oxon., B.Sc. Lond. (10d.). We noticed the complete work in December.

The Cambridge University Press issue *Solutions to the Exercises in Godfrey and Siddons's Elementary Geometry*, by E. A. Price, B.A. (5s. net); and Messrs. Blackie furnish a *Key to Elementary Geometry*, by Cecil Hawkins, M.A. Both are instructive and serviceable.

SCIENCE.

A Manual and Dictionary of the Flowering Plants and Ferns. By J. C. Willis, M.A., Director of the Royal Botanic Gardens, Ceylon. (10s. 6d. Cambridge University Press. Cambridge Biological Series.)

This is a second edition of a most able and useful compilation, the work being thoroughly revised and rearranged in a single volume. Part I. (pages 1-216) gives a general exposition of the morphology, natural history, classification, geographical distribution, and economic uses of the flowering plants and ferns: it may, for the most part, be read consecutively by students with but a slight knowledge of the subject, and is, indeed, a masterly summary. Part II. (pages 217-622) is the dictionary portion—very full, and elaborately compiled from a multitude of sources; a most valuable compendium of such information as is needed by any but specialists. Part III. (pages 623-670) is a convenient glossarial index of English names, economic products, technical terms, &c. The work is indispensable to the serious student of botany. It is beautifully printed and strongly and flexibly bound.

Notes on the Composition of Scientific Papers. By T. Clifford Allbutt, M.A., M.D., &c., Regius Professor of Physic in the University of Cambridge. (3s. net. Macmillan.)

Prof. Allbutt peruses annually sixty or seventy theses for M.B. and about twenty-five for M.D., and he finds that, while a few are well composed, "the greater number are written badly, some very ill indeed." It is not mere inelegance; "it is such as to obscure, to perplex, and even to hide or to travesty the sense itself." So he sets forth a handy book of criticisms, which may well appeal to a far wider circle. He does not profess to be immaculate himself—"monitis sum minor ipse meis"—and examples are available; but, looking at the matter broadly, one can but hope that his criticisms will be well considered by his students, greatly to their own benefit and his comfort. And there is much in the book that will be suggestive to students of composition generally.

A Primer of Physiology. By E. H. Starling, F.R.S. (1s. Murray.)

Prof. Starling's work in physiology needs no commendation, but it is gratifying to find a master of the subject competent, as well as willing, to present its leading ideas effectively to mere beginners. The exposition is lucid and simple, only the necessary elementary knowledge of the main facts of chemistry and physics being assumed. There are 35 good illustrations.

The third edition of *Elements of the Mathematical Theory of Electricity and Magnetism*, by Prof. J. J. Thomson, M.A., D.Sc., F.R.S., &c. (10s. Cambridge University Press), is strengthened by a new chapter on the properties of moving electrified bodies—a welcome addition to a very able, lucid, and serviceable volume.—Excellent, too, on different lines is the *Higher Text-Book of Magnetism and Electricity* (Volume IV. of "The Tutorial Physics"), by R. Wallace Stewart, D.Sc. Lond. (6s. 6d., Clive)—the author's former work on the subject recast, extended, and brought up to the standard of final degree work. A capable book by an experienced teacher. 358 figures.—*The First Stage Magnetism and Electricity* (treated from the standpoint of Potential and Potential-Gradient), by R. H. Jude, M.A. Cantab., D.Sc. Lond. (2s., Clive), has been entirely recast and markedly improved, the practical needs of young engineers being kept well in view. Judicious exercises (with answers); examination papers; 121 figures.

A revised edition of *Elements of Botany*, by Joseph Y. Bergen, A.M. (5s., Ginn), shows considerable alterations under experience, the exposition being curtailed in some places and expanded in others, and several useful additions being made. Much care has also been bestowed on the illustrations—frontispiece, 15 plates, and nearly two hundred figures. A practical and helpful book.

MODERN LANGUAGES.

Portuguese Grammar. By Frank Thomas. (4s. Hirschfeld. Hossfeld's Method.)

A good practical exposition and illustration of the usages of the language, with special care upon the points of real difficulty. Conver-

sations, exercises for translation, retranslation, questions on grammar, ample passages for reading, the more common forms of commercial correspondence, &c., render the work very comprehensive, and, for practical purposes, complete. There are occasional weaknesses in the logical treatment, we think; but that is no peculiarity, and matters little from the practical point of view. The volume is an excellent addition to the series.

Frases y Cuentos para Niños. (Madrid: S. Calleja.)

This is the second part of "El Instructor: Metodo de lectura conforme con la inteligencia de los Niños," by Don Mateo Jiménez Avoca, approved by both the ecclesiastical and the secular authorities. The illustrations are numerous and appropriate, if not very lively or stimulating; and a good portrait of Pope Pío X. watches over all by way of frontispiece. The "frases" are moral sentences; the "cuentos" are stories, with a moral, religious, or patriotic purpose, simple enough to the adult, but little graduated, though some help is derived from repetitions. The pedagogical aspect of the little book, except for the pictures, takes an Englishman back to the earlier half of the last century. Yet the pictures give hopes of other coming improvements—freshness and variety of matter, and graduation of linguistic difficulties. A very interesting little volume.

Commercial German. By Gustav Hein, Senior German Master, Aberdeen High School for Girls, and Michel Becker, Professor of Modern Languages in the Ecole Alsacienne, Paris. (4s. 6d. Murray.)

The volume consists of 85 passages, partly original, but mostly selected from contemporary books and newspapers, conveying extensive and useful information about German trade, manufactures, geography, and commercial resources. A series of questions is appended to each passage, not only to impress the facts stated, but also to suggest further instruction on the part of the teacher. Brief notes in German are added at the end of the book, and there is a good map of the German Empire (in Europe). Within its professed scope, the book is skilfully executed, and it is well printed and tastefully got up.

SOME ENGLISH READERS.

Nelson's Literature Readers, Book II., selected and annotated by Dr. Richard Garnett, C.B., and arranged for use as Book VII. of the "Royal Prince" or "Royal Princess" Readers (2s.), is a substantial repertory of excellent literary passages of widely varied character. Brief notices of the authors cited are appended with the laudable purpose of "affording a glimpse of an ampler world."

The Jack Readers, Fifth Book, by Thomas Cartwright, B.A., B.Sc. Lond. (1s. 6d.), continues the series with good matter and numerous illustrations.—*The Children's Pickwick* and *The Children's Scott*, consisting of readings from Dickens and Scott chosen and annotated by Mr. Cartwright, make interesting and attractive reading books for fairly advanced pupils.

Two new volumes of the "Ludgate Supplementary Readers" (1s. 6d. each, Routledge)—*Round the Coast*, by George F. Bosworth, F.R.G.S.; and *Heroes of Industry*, by Frances E. Cooke—both with numerous illustrations and brief notes, will be cordially welcomed.

The "Round the World" Geographical Series—one of Messrs. Jack's new enterprises—opens with several attractive and agreeably instructive volumes, which promise well for those that are to follow. (1) *Tales of Travel* (10d.) and (2) *Land and Water* (1s.), by Charles F. Hayward, and (3) *Our English Home* (1s. 3d.), by Charles W. Crook, B.A., B.Sc. Lond., and W. H. Weston, B.A. Lond., are simple introductory books, interestingly written and liberally illustrated. (4) *Europe*, by W. Vere Mingard, (5) *America*, by John Kelly, and (6) *Australasia*, by G. L. Glover, B.A. Lond. (1s. 6d. each), are more advanced, describing the countries broadly in easy language, so that the children may receive a substantial knowledge of the more important characteristics. Many of the illustrations are coloured, and they are all judiciously chosen to impress various aspects of the countries and of the life of the people. The maps also are most helpful.

The volume on *The British Isles* (1s. 6d.), in Nelson's able and interesting "The World and its People Series," gives a capable and lucid, yet simple, description of the geographical features, the trade and commerce, the life of the people, and so forth. The illustrations, many of which are coloured, are varied and abundant, the maps being specially good and useful. Summaries are appended.

Pitman's "New Era Geography Reader," *The World* (1s. 10d.), is a substantial volume, ably descriptive, and profusely and picturesquely illustrated. Many of the illustrations are coloured, and there are many helpful maps. A summary is appended.—*Book II.* of the same series, by Robert Bunting (1s.), consists of very interesting lessons, both in prose and in verse, based upon and indirectly teaching the simpler facts of physical geography. Again the illustrations are profuse, and some of them are coloured.

"The Jack Historical Readers"—(1) *Roman and Saxon England*, by Charles F. Hayward (1s.), (2) *Norman and Plantagenet England*, by Charles F. Vernon, B.A. Lond. (1s. 3d.), and (3) *Tudor England*, by A. R. Tilley, F.E.I.S. (1s. 6d.)—narrate the main course of events vividly enough, with occasional summaries supplying further details.

The illustrations are numerous and mostly good; several of them are coloured. King John, we are glad to note, is pictured *sealing* (not signing) the great Charter. But Bruce did not "serve in the English Army at the battle of Falkirk," and the numbers of the opposing armies at Bannockburn are, as usual, much overstated.

The Addison Temperance Reader, by William Finemore (1s. 6d., Addison Publishing Co.), is intended to convey to the upper standards in schools timely lessons upon the evils arising from drink, juvenile smoking, and thriftlessness, and upon the importance of good habits in general. Fortunately, it is temperately written. Anecdote and poem are pressed into service, and the argument is adequately presented in concrete and reasonable form, while the scientific aspects are fully recognized. The lessons are bright and attractive. If early teaching is to prove effective, this volume seems to stand a better chance of success than others we remember. There are several illustrations, all of a properly sober character. The type is good, and the binding strong.

EDUCATION.

A Short History of Education. By G. Benson Clough. (2s. 6d. Ralph, Holland, & Co.)

A very judicious selection of main points in the whole history of educational ideas and practice (except in America), with special attention to the English system since Bell and Laneaster. An account of "The Great Foundations" in England is presented in chronological order and in concise detail; and "The Legislative Growth of English Education" is similarly traced from the First Factory Act (1802) down to the Education Act (London), 1903. The volume will convey a great deal of information to "a public lamentably ill-informed as to the growth of our English system," and furnish a sound and convenient basis for more extensive study.

The Educational Ideas of Pestalozzi and Froebel. By F. H. Hayward, D.Lit., M.A., B.Sc. (Lond.), B.A. (Cantab.), F.C.P. (2s. Ralph, Holland, & Co.)

If this is not the exhaustive treatise that Dr. Hayward would have liked to write, it will at any rate prove a great boon to such teachers as take their Certificate Examination next year, and it will serve the further more important purpose of stimulating interest and inquiry. It is written with abundant knowledge and with acute, forcible, and independent criticism. The hardest knocks are bestowed—and in large measure well bestowed—upon Rousseau; Dr. Hayward rejoices "to have the opportunity of protesting against the pernicious and extraordinary influence of this thief, parasite, rogue, and voluptuary of Geneva," though admitting that "on many matters he was highly stimulating and suggestive." We hope that Dr. Hayward will go ahead with his idea of "a synthesis of educational thought, the discovery and exposition of a mass of educational agreement among the master minds." He will then begin to appreciate the (entirely benevolent) remark we recently made in our "drowsier moments" about his "exalted mood."

RELIGION AND MORALS.

Old Testament History for Schools. By the Rev. T. C. Fry, D.D. (2s. 6d. Edward Arnold.)

Dr. Fry, with his accustomed courage, frankly takes, "speaking generally, the critical view," which he believes "to be unanswerable on all main points." He also believes that "the teaching of the Old Testament should not conceal these points"; for "boys think about these things, when they read of or are told of them, more than their elders imagine," and "the faith of the next generation largely depends on the truth being told." But there is no ground for alarm: Dr. Fry handles his materials with great prudence, "and whatever is here written is written with a full sense that new light may teach us yet more." The book is a very able and lucid presentation of the subject. There are three very serviceable maps, and the get-up is excellent.

Old Testament History, for use in Schools. By the Rev. W. F. Burnside, M.A. (3s. 6d. Methuen.)

The volume is primarily addressed to "Forms below the Sixth in Secondary Schools, in the belief that it is possible, with all reverence for tradition, though not on strictly conservative lines, to make the Old Testament a real living force in religious education." Every paragraph of the narrative and exposition has its reference to the text of the Bible, and considerable extracts, selected for their importance, beauty, or familiarity, are inserted. Though not "strictly conservative," Mr. Burnside will not be quarrelled with for lack of conservatism. The narrative is lucid; much illustrative matter is introduced; and the style is interesting. There are three welcome maps. The volume is altogether exceedingly well executed, and cannot fail to be alike popular and useful.

The Life Radiant. By Lilian Whiting. (4s. 6d. net. Gay & Bird.)

"The Life Radiant is that transfiguration of the ordinary daily events and circumstances which lifts them to the spiritual plane and sees them as the signs and the indications of the divine leading." Miss Whiting works out in some detail five lines of exemplification in an easy and attractive style, with plenty of illustrative anecdotes.

The tone is sympathetic and elevated. The volume is beautifully got up.

NATURE STUDY.

Botany Rambles. By Ella Thomson. Parts I., II., and III. (10d., 1s., 1s. Horace Marshall.)

The three parts exemplify respectively the more familiar botanical interests of spring, summer, and autumn. The text is simply and attractively written, and the illustrations are very helpful. The books are intended "mainly for revision, after practical lessons have been given," and "not merely as class reading-books." But, as they consist of "little talks about the trees and plants which you are likely to see on your walks," they may be taken as aids to Nature study (in its ordinary sense). They are capably executed, and cannot but be most serviceable for their purpose. They are also nicely and liberally got up.

Observation Lessons on Plant Life. By Mrs. Beverley Ussher and Dorothy Jebb. (3s. 6d. net. Newmann.)

The work is intended as "a guide to the teacher" as well as a storehouse of instruction for the pupil; and it is calculated for a two years' course, or seventy-four hours of study. The treatment is intentionally informal, and, if the sequence is irregular, yet there is preserved a general progression, and the authors appeal to the Board of Education's injunction that "the instruction should in every case be appropriate to the season of the year and the circumstances of the locality." The illustrations are numerous and good, and the get up is handsome. A very engaging book.

In the "How-and-Why Series" Messrs. Charles & Dible present *Flowers of the Prime and More Flowers of the Prime*, by F. H. Shoosmith, B.Sc. Lond., illustrated by the author, 2d. net each. Both brochures are interestingly written, and calculated to foster a love of the subject as well as to give immediate particular instruction and suggestion.

ANNUALS.

The Schoolmasters Yearbook and Directory, 1905. (5s. net. Swan Sonnenschein & Co.)

The third annual issue of this indispensable "reference-book of secondary education in England and Wales" exhibits abundant vitality. It runs on the former general lines, and brings together into handy compass an enormous number of facts, very important for reference. The outstanding points of the past educational year are concisely and clearly presented on a somewhat larger scale than before. The difficulty of finding space for everything that everybody would like to see in the volume is obvious enough; but we sympathize with the correspondent that wished "that the names of all professors and lecturers at universities and university colleges could be inserted in the Directory," and are rather surprised that the editor finds it "impossible to accept this suggestion" when he has elsewhere made room for all the members of all the Education Committees. Should the "Schoolmasters" of the title have an apostrophe or not? Mr. Horace Hart decides that it should, being "distinctly in the possessive case." We agree with the editor that it should not, being distinctly not in the possessive case. Small matters these, no doubt; but they indicate a laudable desire for the best results.

The Public Schools Year-Book (2s. 6d., Swan Sonnenschein) continues to effect its purpose of "providing a record, at once comprehensive and concise, of all matters of interest to parents, schoolmasters, and boys." The information is ample, judiciously selected, and to all appearance accurate. New features also have been introduced, and old features have been expanded. The work is limited to such public schools as are represented at the Head Masters' Conference, and the difficulties of drawing the line in details are surmounted with good judgment. "Colonial openings for public-school boys" is the subject of a full and careful section, and a future section on professional openings is contemplated, and will no doubt be welcomed. A very comprehensive, businesslike, and serviceable manual.

Hazell's Annual for 1905 (3s. 6d. net, Hazell, Watson, & Viney) is—for the twentieth time—indispensable. Apart from advertisements (which also have their interest and uses), it now extends to nearly 800 pages in double columns of close (but very clear) type, and is more encyclopædic than ever, new "men and topics of the day" ("the men, in this instance, embracing the women," we are told), pressing forward for notice and duly receiving attention. This, the main object of the book, constitutes the essential value of the book. It is an instructive and never-failing companion to the newspaper. How did we ever get on without it?

MUSIC.

The first numbers of *The Musical Home Journal* (1d. each, Cassell) give high promise of satisfying a want that must be widely felt. Each number contains half a dozen copyright songs and pieces by well known composers, well varied in character, and simple to any one with a rudimentary knowledge of music. The type is clear, and the paper is good. We have no doubt that this new enterprise of Messrs. Cassell's, on their traditional lines of popular instruction and entertainment, will be very generally appreciated.

FIRST GLANCES.

CLASSICS.

- Greek in the Previous Examination. By W. Chawner, M.A., Master of Emmanuel. 6d. net. Macmillan & Bowes.
[A strenuous argument for the maintenance of Greek.]
- Latin Composition for Secondary Schools. By Benjamin L. D'Ooge, Ph.D., Professor in the Michigan State Normal College. Part I. 2s. 6d. Ginn.
[Based on selections from Caesar. Systematic and elaborate. Long vowels marked.]
- Latin Verb Table. By E. J. Lloyd, B.A. 1s. net. Spottiswoode & Co. (Eton College).
[Deftly arranged. Strongly got up.]
- Lucian. Charon and Piscator. Edited by T. R. Mills, M.A. Oxon. 3s. 6d. Clive (University Tutorial Series).
[Capable introduction and notes. Good print.]
- Vergil. Æneid, Book VII. Edited by L. D. Wainwright, M.A. 1s. 6d. George Bell (Illustrated Classics).
[Brief and pointed introduction; serviceable notes; vocabulary; and a score of illustrations.]

MATHEMATICS.

- Algebra, Elementary, Part II. By W. M. Baker, M.A., and A. A. Bourne, M.A. With or without Answers, 2s. 6d. George Bell.
Teachers' edition of the complete work, with the answers printed opposite each set of examples. Parts I. and II., 5s. net each.
Examples in Algebra, extracted from "Elementary Algebra," with or without answers, 3s. Or, Part I. and Part II., separately, without answers, 1s. 6d. and 2s.
- Arithmetic, New School. Part II. By Charles Pendlebury, M.A., F.R.A.S., assisted by F. E. Robinson, M.A. 2s. 6d. George Bell (Cambridge Mathematical Series).
The complete work, with or without answers. 4s. 6d.
Examples in Arithmetic: extracted from "The New School Arithmetic." 3s.
[Thoroughly revised; abundant examples.]
- Arithmetic, The "Council," for Schools. By T. B. Ellery, F.R.G.S. Scheme B, Parts I. and II. 2d. and 3d.
[With twenty, and twelve, illustrations, specially drawn.]
- Arithmetical Test Cards (Scheme B), McDougall's Term. Classes III., IV., V. 1s. net each packet.
[Well selected; most serviceable.]
- Arithmetical Test Cards (Scheme B), Pendlebury's. Standards III., IV., V., VI. 1s. net each. George Bell.
[Thirty-six cards each; 720 and 756 sums; 2 copies of answers in each packet. Admirably planned and executed.]
- Geometry, Elementary Plane. By V. M. Turnbull. 2s. Blackie.
[Introduction to Deductive Geometry, to follow a course of experimental work. Abundant numerical examples and exercises.]
- Geometry, Plane: Practical and Theoretical. By John Sturgeon Mackay, M.A., LL.D., F.R.S.E. Books I., II., and III. 2s. 6d. Chambers.
[Congruent and Equivalent Figures, corresponding to Euclid I.-IV. A section on Geometrography—a subject that "makes its appearance here for the first time in an English text-book." Numerous questions and problems.]
Book I. separately, 1s.
- Geometry, Practical, with Mensuration. 1s. Oliver & Boyd (Educational Series).
[Includes the leading propositions of Euclid, a chapter on the Ellipse, and Elementary Graphs; treatment mainly experimental; investigation and test exercises.]
- Graphs, An Elementary Treatise on. By George A. Gibson, M.A., F.R.S.E., Professor of Mathematics in the Glasgow and West of Scotland Technical College. 3s. 6d. Macmillan.
- Mathematics, Preliminary Practical. By S. G. Starling, B.Sc. (Lond.), A.R.C.S. (Lond.), and F. C. Clarke, B.Sc. (Lond.), A.R.C.S. (Lond.). 1s. 6d. E. Arnold. (Mathematical Series).
[For technical purposes; "entirely introductory."]
- Ovaltheorie, Beziehungen des du Bois-Reymondschen Mittelwertsatzes zur. Eine mathematische Studie von Hermann Brunn. 7 mk. Reimer (Berlin).
- Problem Papers, Mathematical. Compiled and arranged by the Rev. E. M. Radford, M.A. 4s. 6d. net. Cambridge University Press.
[Primarily for candidates for Mathematical Entrance Scholarships at Oxford and Cambridge. Many original, others from papers set in various University and College examinations. Judicious selection, carefully graduated.]

SCIENCE.

- Biology and Nature Study, A Primer of. By Randal Mundy, B.A., B.Sc. (Lond.). 2s. 6d. Ralph, Holland, & Co.
[Broad principles; evolutionary development.]
- Cambridgeshire, The Natural History of. Edited by J. E. Marr, Sc.D., F.R.S., and A. E. Shipley, M.A., F.R.S. 4s. net. Cambridge University Press.
[Specialist contributors. Geological and other maps.]
- Carbon Compounds, A Scheme for the detection of the more common classes of. By Frank E. Weston, B.Sc. (Lond.), F.C.S. 2s. Longmans.
[Very helpful to students for London B.Sc., &c.]
- Currents, Alternating, A Treatise on the Theory of. By Alexander Russell, M.A., M.I.E.E. Vol. I. 12s. net. Cambridge University Press (Cambridge Physical Series).
[Mathematical theorems used by electricians in everyday work collected and examined.]
- Nature Study and Observational Lessons, Eton. By M. D. Hill, M.A., F.Z.S., and W. M. Webb, F.L.S. Part II. 3s. 6d. net. Duckworth.
[Judicious selection of points; abundant illustrations.]
- Physics, A Text-Book of. By J. H. Poynting, Sc.D., F.R.S., Mason Professor of Physics in the University of Birmingham, and J. J. Thomson, M.A., F.R.S., Hon. Sc.D., &c., Cavendish Professor of Experimental Physics in the University of Cambridge. Vol. III.: Heat. 15s. Griffin.
[Stress on the experimental side.]
- Science, Practical, A Further Course of. By J. H. Leonard, B.Sc. (Lond.) and W. H. Salmon, B.A. (Camb.), B.Sc. (Lond.) 2s. Murray.
[Mechanics, Hydrostatics, Heat. Lucid and pointed.]
- Trees. By H. Marshall Ward, Sc.D., F.R.S., Professor of Botany in the University of Cambridge. Vol. I.: Buds and Twigs. Vol. II.: Leaves. 4s. 6d. net. each. Cambridge University Press.
["A Handbook of Forest-Botany for the Woodlands and the Laboratory." Numerous excellent illustrations.]

EDUCATION.

- Board of Education. (1) Report for 1903 on the Victoria and Albert Museum, &c. 6d. Wyman: not Eyre & Spottiswoode, as given last month. (2) Reports on Science Examinations, 1904. 6d. Wyman: not Eyre & Spottiswoode, as given last month. (3) Technical Education (Application of Funds by Local Authorities), 1902-3. 1s. 2d. H.M. Stationery Office.
- Calcutta University, The Development of: a Study in Diagrams. With Notes of Explanation. By Inquisitor. Second Edition. 1 rupee. Calcutta: Newman.
[If the figures be correct, it was time for reform.]
- German Empire, Public Education in the, A General View of the History and Organization of. Translated from the German of W. Lexis, Ph.D., Professor of Political Economy in the University of Göttingen. By G. J. Tamson, Ph.D., M.A., Professor and Lecturer of English in the University of Göttingen. 3s. 6d. net. Asher.
[Opportune for comparative study.]
- German Schools, Notes on. By William H. Winch, M.A., Inspector of Schools. 6s. Longmans.
[With special relation to curriculum and methods of teaching. Also opportune.]
- Guides. (1) The King's Scholarship Guide; (2) The Normal "Article 68" Teachers' Guide; (3) The Teachers' Certificate Guide—all by P. Lyddon-Roberts, A.C.P., and E. E. Denney, A.C.P. (4) Guide to the A.C.P. Examination. By A. E. Ikin, B.Sc. (Lond.), L.C.P. 6d. net each. Normal Press.

OXFORD UNIVERSITY PRESS.

BOOKS SET AND SUITABLE FOR THE COLLEGE OF PRECEPTORS' EXAMINATIONS, 1905.

Shakespeare. Edited by W. ALDIS WRIGHT. **Julius Caesar,** 2s. **Twelfth Night,** 1s. 6d.

Scott.—Lay of the Last Minstrel. Edited by W. MINTO. Second Edition. 1s. 6d. Separately, Introduction and Canto I. 6d.

Concise French Grammar, including Phonology, Accidence, and Syntax, for use in Upper and Middle Forms. By A. H. WALL. Crown 8vo, cloth, 4s. 6d.

French Primer, for use in Middle and Lower Forms. By the same Author. Extra fcap. 8vo, cloth, 2s.

Oxford Modern French Series. Edited by LEON DELBOS, M.A. Crown 8vo, cloth. The first Ten Volumes are the following:—LAMARTINE'S "Deux Héroïnes de la Révolution Française," 2s. 6d.; BALZAC'S "La Vendetta" and "Pierre Grassou," 2s.; VICTOR HUGO'S "Bug-Jargal," 2s.; SANDEAU'S "Mademoiselle de la Seiglière," 2s. 6d.; CHATEAUBRIAND'S "Mémoires d'Outre-Tombe," 2s. 6d.; KARR'S "Voyage autour de mon Jardin," 2s.; GOZLAN'S "Le Château de Vaux," 1s. 6d.; "Extraits de Voyages d'Alexis de Tocqueville," 2s.; DAVID'S "Le Serment," 1s. 6d.; THIERRY'S "Les Normands en Angleterre et en France," 2s. 6d.

Tales of the Roman Republic, PART I. Adapted from the Text of Livy. By J. B. ALLEN. Extra fcap. 8vo, paper boards, 1s. 6d.

Caesar.—The Gallic War. BOOKS III–V. Edited by C. E. MOBERLY. Extra fcap. 8vo, cloth, 2s. 6d.

Horace.—Odes, Carmen Saeculare, and Epodes. By E. C. WICKHAM. Second Edition. Crown 8vo, cloth, 6s.

Virgil.—Aeneid. BOOKS I–III. By T. L. PAPILLON and A. E. HAIGH. Crown 8vo, stiff covers, 2s.

Latin Exercises. By G. G. RAMSAY. In Three Volumes. Vol. I, Lower Grade. 1s. 6d. Vol. II, Higher Grade. 1s. 6d. Vol. III, Syntax. 2s. 6d.

Euripides.—Hecuba. Edited by C. B. HEBERDEN. Extra fcap. 8vo, cloth, 2s. 6d.

Xenophon.—Anabasis. BOOK I. By J. MARSHALL. 1s. 6d. BOOK II. By C. S. JERRAM. 1s. 6d. BOOK III. 1s. 6d. BOOK IV. 1s. 6d. BOOKS III and IV, together. 3s.

Each volume has the full Vocabulary bound up with it; the Vocabulary can also be had separately for 1s.

Elementary Greek Grammar. Containing Accidence and Elementary Syntax. By J. B. ALLEN. Fcap. 8vo, cloth, 3s.

Manual of the Four Gospels. By the Rev. T. H. STOKOE. With Maps. Crown 8vo, cloth, 3s. 6d. Or, separately, PART I, The Gospel Narrative, 2s.; PART II, The Gospel Teaching, 2s.

Manual of the Acts of the Apostles. By the same Editor. 3s.

School History of England (to the Death of Victoria). With Maps, Plans, and select Bibliographies. By O. M. EDWARDS, R. S. RAIT, and others. Crown 8vo, cloth, 3s. 6d.

Historical Geography of the British Colonies.

By C. P. LUCAS, C.B. Crown 8vo, cloth. Introduction. New Edition by H. E. EGERTON. 1903. With Eight Maps. 3s. 6d. In cheaper binding, 2s. 6d.

Vol. I. The Mediterranean and Eastern Colonies (exclusive of India). With Eleven Maps. 1888. 5s.

Vol. II. The West Indian Colonies. With Twelve Maps. 1890. 7s. 6d.

Vol. III. West Africa. Revised to the end of 1899 by H. E. EGERTON. With Five Maps. 7s. 6d.

Vol. IV. South and East Africa. Historical and Geographical. With Eleven Maps. 1898. 9s. 6d.

Also PART I. Historical. 6s. 6d. PART II (1903). Geographical. 3s. 6d.

Vol. V. Canada, PART I. 1901. 6s.

Elementary Political Economy. By E. CANNAN. Fourth Edition. Extra fcap. 8vo, stiff covers, 1s. (Published by Mr. Frowde.)

Arithmetic. With or without Answers. By R. HARGREAVES. Crown 8vo, cloth, 4s. 6d.

Practical Work in General Physics. By W. G. WOOLLCOMBE. Crown 8vo, cloth, 2s. each part.

PART I. General Physics. Second Edition, Revised. PART II. Heat. Second Edition, Revised. PART III. Light and Sound.

PART IV. Magnetism and Electricity.

Euclid Revised, containing the essentials of the Elements of Plane Geometry as given by Euclid in his first six Books. Edited by R. C. J. NIXON. Third Edition. Crown 8vo, cloth, 6s.

Sold separately as follows:—BOOK I, 1s., BOOKS I, II, 1s. 6d.; BOOKS I–IV, 3s.; BOOKS V, VI, 3s. 6d.

Experimental and Theoretical Course of Geometry. By A. T. WARREN. Crown 8vo, cloth. With or without Answers. Second Edition. 2s.

Geometry for Beginners: an Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. Extra fcap. 8vo, stiff covers, 1s. 6d.

SOME RECENT PUBLICATIONS.

The Moscow Expedition. Extracted from THIERS'S "Histoire du Consulat et de l'Empire," Vol. XIV. Edited, with Introduction and Explanatory Notes, by HEREFORD B. GEORGE. With Maps. Crown 8vo, cloth, 5s.

Relations of Geography and History. By H. B. GEORGE. Second Edition. With two Maps. Crown 8vo, cloth, 4s. 6d.

Livy. BOOK VI. By A. R. CLUER. Second Edition. Revised by P. E. MATHESON. Fcap. 8vo, cloth, 2s.

The Euthydemus of Plato. With Revised Text, Introduction, Notes, and Indices. By EDWARD HAMILTON GIFFORD, D.D. Crown 8vo, cloth, 3s. 6d.

The Preparation of the Child for Science. By M. E. BOOLE. Crown 8vo, cloth, uniform in size, binding, and price with Mrs. BOOLE'S "Logic of Arithmetic." 2s.

A Geometrical Political Economy. Being an Elementary Treatise on the Method of explaining some of the Theories of Pure Economic Science by means of Diagrams. By H. CUNYNGHAME, C.B., M.A. Crown 8vo, cloth, 2s. 6d. net.

The Elements of Railway Economics. By W. M. ACWORTH, M.A. Crown 8vo, cloth, 2s. net.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL AND LOGICAL FOUNDATIONS OF INTELLECTUAL EDUCATION.

To be delivered by W. E. JOHNSON, M.A., Sidgwick Lecturer in Moral Science in the University of Cambridge.

The First Course of Lectures (Thirty-third Annual Series) will commence on Thursday, February 9th, at 7 p.m.

The Course, consisting of Twelve Lectures, will deal with Education, on its intellectual side, as based upon psychological and logical theories. References will be made throughout the course to the practical problems of teaching, and a constant endeavour will be made to show how theory may throw light upon practice. Directions will be given as to reading, and opportunities will be given after each lecture for the discussion (i.) of questions proposed by the students attending the course; and (ii.) of their answers to papers which will be set from time to time by the Lecturer.

SYLLABUS.

I.—The definition of education as a practical science. Its dependence upon the theoretical science of psychology. Its connection with the normative sciences of logic, aesthetics, and ethics. Education must assume general agreement in regard to the ultimate needs of life, and the criteria by which such ends are judged. It is a science of means, not of ends. The distinctions and relations between intellectual, artistic, and moral education. Practical aspects of the relations between mind and body. The scope and nature of so-called physical education.

II.—Methods and general results of psychological analysis. The chief methods of obtaining particular psychological data—(i.) the introspective, (ii.) the interpretative. Range, difficulties, and connections of these two methods. Special practical opportunities afforded to the teacher of contributing to psychological observation. The three fundamentally distinct factors of conscious experience—knowledge, feeling, activity; to be regarded as mutually dependent, not antagonistic. Education is concerned with the control of the conscious activities of the child. Forms and degrees of activity.

III.—Preliminary definitions of technical terms in psychology. Conation; desire and aversion; purpose. Interest; attention. The intellectual processes arranged in a rough scale according to order of development and defined: sensation, perception, observation, memory, imagination, conception, reasoning.

IV.—General principles of intellectual development. Retentiveness and modifiability. Differentiation and assimilation. Facility and familiarity. Practice and habit. Mental process and mental product. Acquisitions and applications. Active and receptive phases.

V.—The reference of intellectual processes to so-called faculties. The practical errors that have arisen from a false view of the distinctions and identifications of faculty—things connected which should be separated, and things separated which should be connected. The key for understanding the due connection and separation of educational aims and influences to be found in the principle of unity of interest. Interest as progressive and as involving subjective activity. Two-fold function of the teacher in regard to interest. Aspects of the doctrine of apperception as applied to education.

VI.—Perception as a direct and purposive co-ordination of sensory and motor elements. The acquisition of physical dexterities and aptitudes by practice. Connected development of the organs of sense and the organs of movement. Sense discrimination aided by motor production—speaking, drawing, singing, &c. Imitation as an instrument in the development of perceptual process. Observation, as in listening and watching, involves prospective and retrospective attention determined by continuity of purpose and interest.

VII.—Association or suggestion. Association involves a process of reintegration depending upon a previous integration. The process may be analysed as involving the relation either (a) between parts contained in a common whole, or (b) between wholes containing a common part. Different forms of association. Control of association by purpose. Co-operative and antagonistic associations. Technical aids and pedagogic maxims based on the doctrine of association.

VIII.—Memory—Ambiguities of the term: sometimes limited to reminiscence. Broadly it includes the reproduction, in a connected series, either (a) of movements, (b) of images, or (c) of ideas. In particular verbal memory depends on a repetition of the articulatory movements of speech. This process is more or less accompanied and assisted by corresponding images and ideas. The use of language thus depends on a double process of association.

IX.—Imagination: its three kinds—reproductive, interpretative, and originitive. Imagination and perception regarded by technical psychology as occupying corresponding or parallel ranges. The power of imagination gauged by (a) its vividness and consequent influence upon feeling, (b) its subservience to purposive control. Childish imagination not more vivid, but less controlled, than that of the adult. Difficulties in exercising the child's imagination through the medium of words. Practically, imagination cannot be separated from ideation. Illustrations from the teaching of geography and history.

X.—Ideas and conceptions. Knowledge develops from the relatively particular and indefinite to the relatively general and definite. The function of comparison in this process of development. The absence of relations of difference in knowledge not to be confounded with the presence of relations of agreement; nor the absence of relations of agreement to be confounded with the presence of relations of difference. Growth of knowledge manifested equally in the apprehension of new points of agreement and of new points of difference.

XI.—Grammatical and logical account of the forms of speech. The sentence or proposition as unit of thought. The child's power of understanding to be measured by consistency and complexity in the use of language. The teaching of composition. Logical definition and division. The extension and intension of terms, psychologically and logically treated.

XII.—General judgments and reasoning. The avoidance of inconsistency. Deductive and inductive inference. The heuristic method important both in deductive and inductive teaching. Educational aspects of the comparative methods of induction.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

* * The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

C. R. HODGSON, B.A., Secretary.

MATHEMATICS.

15648. (C. E. YOUNGMAN, M.A.)—The number 666 is apparently the greatest triangular number which has all its figures alike. Is there proof of this?

Solutions (I.) by Professor ESCOTT; (II.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.

(I.) $\frac{1}{2}x(x+1) = a + 10a + 100a + \dots + 10^{r-1}a = \frac{1}{2}a(10^r - 1)$.

Multiplying by 8 and adding 1,

$(2x+1)^2 = \frac{1}{2}[8a(10^r-1)+9]$ ($a = 1, 2, \dots, 9$).

We see at once that the values $a = 2, 4, 7, 8, 9$ are impossible, and that 3 is impossible excepting for $r = 1$. This leaves the following cases:—

$a = 1, 8 \cdot 10^r + 1 = y^2; \quad a = 5, 40 \cdot 10^r - 31 = y^2;$
 $a = 6, 48 \cdot 10^r - 39 = y^2.$

We can determine whether or not any one of these equations has a solution for r below any desired limit, by using Gauss's "method of exclusion." For example, when $a = 5$,

$y^2 = 40 \cdot 10^r - 31 \equiv 4(1 + 3^{r+1}) \pmod{7}.$

Therefore, since 4 is a quadratic residue of 7, $1 + 3^{r+1}$ must also be congruent to a quadratic residue, *i.e.*,

$1 + 3^{r+1} \equiv 0, 1, 2, 4 \pmod{7}$ or $3^r \equiv 2, 0, 5, 1 \pmod{7}$;

therefore $r = 6t + 2, 0, 5$.

Similarly, by taking residues with respect to modulus 13, we get $r = 3s + 2, 0$; and, from modulus (17),

$r \equiv 0, 2, 3, 5, 10, 11, 12, 14, 15 \pmod{16}.$

By continuing this process, we can find as many expressions for the form of r as we please. I find that the only value of $r < 122$ is 2. Therefore, there is no triangular number containing less than 123 digits all of whose digits are 5's excepting 55.

In this way I find that there are no triangular numbers of less than 30 digits of the required form excepting 1, 3, 55, 6, 66, 666.

[Rest in Reprint.]

15669. (Communicated by A. V. KUTTI KRISHNA MENON, B.A.)—O and O' are two fixed points, P any point in a curve defined by the equation $1/r - 1/r' = 1/c$ where $r = OP$, $r' = O'P$, and c is constant. Prove that the distance between P and the consecutive curve obtained by changing c to $c + \delta c$ is ultimately $\delta c / \sqrt{[1 + 3c^2/(rr') + a^2c^4/(r^3r'^3)]}$, where $a = OO'$.

[Note.—The Proposer desires to obtain an elegant solution of the above "Smith's Prize" Question.]

Solutions (I.) by R. F. DAVIS, M.A., and M. V. A. SASTRY, B.A.; (II.) by S. C. BAGCHI, B.A.

(I.) Since $r' - r = rr'/c$,
 $r^2 - 2rr' + r'^2 = r^2r'^2/c^2$
 and $\cos P = 1 + rr'/2c^2 - a^2/2rr'$.

Differentiating;

$(1/r^2)(dr/ds) = (1/r'^2)(dr'/ds)$,

or $r'^2 \cos \phi = r^2 \cos (P - \phi)$;

whence

$\tan \phi = (r'^2 - r^2 \cos P) / r^2 \sin P$

and $\cos \phi = r^2 \sin P / T$, where

$T^2 = r^4 + r'^4 - 2r^2r'^2 \cos P$
 $= 4r^2r'^2(1 + rr'/c^2 + r^2r'^2/4c^4)$
 $- 2r^2r'^2$
 $- 2r^2r'^2(1 + rr'/2c^2 - a^2/2rr')$
 $= r^4r'^4/c^4 + 3r^3r'^3/c^2 + a^2r^2r'$.

Thus $T = (r^2r'^2/c^2) \sqrt{[1 + 3c^2/(rr') + a^2c^4/(r^3r'^3)]}$. Now, taking a point Q on the normal at P such that PQ = ξ , then

$1/r - 1/r' = 1/c$ and $1/(r + \xi \sin \phi) - 1/(r' - \xi \sin (P - \phi)) = 1/(c + \delta c)$.

Therefore $\xi \sin \phi / r^2 + \xi \sin (P - \phi) / r'^2 = \delta c / c^2$,

or $\xi [\sin \phi (r'^2/r^2) + \sin (P - \phi)] = \delta c (r'^2/c^2)$,

$\xi [\cos (P - \phi) \sec \phi \sin \phi + \sin (P - \phi)] = \dots, \quad \xi \sin P \sec \phi = \dots$

But $\cos \phi = r^2 \sin P / T$. Hence $\xi T = \delta c (r^2r'^2/c^2)$, which gives the required result.

(II.) Consider the potential V at a point P due to charges (+1, -1) placed at O, O' respectively. Let

$cV = 1, \quad (c + \delta c) V_1 = 1 \dots \dots \dots (i., ii.),$

where $c, c + \delta c$ are constants and δc is very small. Then (i.) and (ii.) are two consecutive equipotential curves. If the electric intensity at P be R, and if the element of normal to (i.) cut off by (ii.) is $dn = PP'$, we

have $R \cdot dn =$ work done when a unit positive charge is taken from P to $P' = -\delta V = \delta c / c^2$ ultimately; therefore

$dn = \delta c / Rc^2 \dots \dots \dots (iii.).$

But the force along OP = $-\partial V / \partial r$ and that along O'P = $-\partial V / \partial r'$, where $V = 1/r - 1/r' = 1/c$, and $\cos OPO' = (r^2 + r'^2 - a^2) / 2rr'$; therefore

$R^2 = 1/r^4 + 1/r'^4 - (r^2 + r'^2 - a^2) / r^3r'^3 = 1/c^4 + (3/rr')(1/c^2) + a^2/r^3r'^3 \dots (iv.).$

Substituting in (iii.) the value of R given by (iv.), we get

$dn = \delta c / \sqrt{[1 + 3c^2/(rr') + a^2c^4/(r^3r'^3)]}.$

15616. (Professor NANSON)—Four lines S_1, S_2, S_3, S_4 , each passing through three of the lines. Show that S_1, S_2, S_3, S_4 are connected by an identical equation $\sum \lambda_{pq} S_p S_q = 0$ where λ_{pq} is a constant which vanishes when the lines p, q intersect.

Solution by Rev. J. CULLEN.

Using vectors, a given line p can always be put in the form

$\rho = \alpha_p \beta_p^{-1} + x \beta_p$
 $S \alpha_p \beta_p = 0 \dots \dots \dots (1).$

The two lines p and q intersect if ρ is common, which implies

$S(\alpha_p \beta_q + \alpha_q \beta_p) = 0 \dots \dots \dots (2).$

Put $\mu_p = \alpha_p + V \beta_p$; then, by (1),

$S \beta_p \mu_p = 0 \dots \dots \dots (3)$

and $\lambda_{p,q} = S(\beta_q \mu_p + \beta_p \mu_q) \dots \dots \dots (4).$

Now the quadric determined by the lines p, q, r is

$S \mu_p \mu_q \mu_r = 0 \dots \dots \dots (5);$

so, substituting in $\sum \lambda_{p,q} S_p S_q$, we see that this expression takes the form

$\sum S_1 S_2 (\mu_2 S_3 \mu_4 \mu_1 + \mu_3 S_4 \mu_2 \mu_1 + \mu_4 S \mu_2 \mu_3 \mu_1).$

Observing that in general $\delta S \alpha \beta \gamma = \sum \alpha S \beta \gamma \delta$ and that $S_1 = S \mu_4 \mu_3 \mu_2$, we find

$\sum \lambda_{p,q} S_p S_q = -\sum S_p^2 S \beta_p \mu_p.$

Each term on the right vanishes in virtue of (3); hence the result.

15678. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Show that $F_m^4 + F_n^2$, where $F_x = 2^{2^x} + 1$ (a Fermat's number), can always be resolved into two factors when $n - m \leq 2$. Write down the co-factors when $n - m = 2$.

Solution by the PROPOSER.

Let $E_x = 2^{2^x}$, so that $E_{x+1} = E_x^2$ and $F_x = E_x + 1$. Let $G_x = E_x - 1$; then $G_x = (E_{x-1}^2 - 1) = (E_{x-1} + 1)(E_{x-1} - 1) = F_{x-1} \cdot G_{x-1}$. Hence also $G_x = F_{x-1} \cdot F_{x-2} \dots F_2 \cdot F_1 \cdot F_0$. Let $N = F_m^4 + F_n^2$; then

$N = (F_m^4 + 4) + (F_n^2 - 4).$

But $F_m^4 + 4 = \{(F_m - 1)^2 + 1\} \cdot \{(F_m + 1)^2 + 1\}$
 $= (E_m^2 + 1) \cdot \{(E_m + 2)^2 + 1\}$
 $= (E_{m+1} + 1) \cdot (E_m^2 + 4E_m + 5) = F_{m+1} \cdot (E_m^2 + 4E_m + 5)$
 and $F_n^2 - 4 = (F_n - 2) \cdot (F_n + 2) = G_n \cdot (E_n + 3) = F_{n-1} \cdot G_{n-1} \cdot (E_n + 3)$
 $= (F_{n-1} \cdot F_{n-2} \dots F_2 \cdot F_1 \cdot F_0) \cdot (E_n + 3).$

Hence $(F_m^4 + 4), (F_n^2 - 4)$ will both contain F_{m+1} if the latter = any of the factors of G_n , *i.e.*, if $m + 1 \geq n - 1$, or $n - m \leq 2$; and in this case N will also contain F_{m+1} and will thus be resolvable into (at least) two factors.

Next, if $n - m = 2$, then $F_{m+1} = F_{n-1}$; therefore

$N = F_{m+1} \cdot \{(E_m^2 + 4E_m + 5) + G_{n-1} \cdot (E_n + 3)\}$
 $= F_{m+1} \cdot \{(E_m^2 + 4E_m + 5) + (E_{m+1} - 1)(E_{m+2} + 3)\}$
 $= F_{m+1} \cdot \{E_m^6 - E_m^4 + E_m^2 + 4E_m + 2\}.$

8747. (Professor HAUGHTON, F.R.S.)—The law of cooling of the Sun is $dT/dt = aT^3 - bT$. Integrate this equation, and show the relation between Sun heat and time.

Solution by ERNEST MCKENZIE.

$dT/dt = aT^3 - bT, \quad dT/dt + bT = aT^3, \quad (1/T^3)(dT/dt) + b/T^2 = a,$
 $[-\frac{1}{2}d(1/T^2)]/dt + b/T^2 = a.$

Put

$1/T^2 = z, \quad dz/dt - 2bz = -2a,$

$ze^{\int -2bdx} = \int -2ae^{\int -2bdx} dx + C, \quad ze^{-2bt} = \int -2ae^{-2bt} dt + C,$

$ze^{-2bt} = (a/b)e^{-2bt} + C, \quad z = a/b + Ce^{2bt},$

$1/T^2 = a/b + Ce^{2bt}$ = relation between T and t.

Note.—The Editor remarks that, assuming the Sun heat T_0 at a time t_0 known, then the arbitrary constant C may be eliminated, and the required relation obtained in the form

$(1/T^2 - a/b) / (1/T_0^2 - a/b) = e^{2b(t-t_0)};$

or, simplifying, $T^2 e^{2bt} / (b - aT^2) = T_0^2 e^{2bt_0} / (b - aT_0^2).$

15523. (A. M. NESBITT, M.A.)—A man, who has m hats of his own in his hall, is visited by n friends, each wearing a hat. They leave their hats

with those of their host. When they are going away they are unfortunately not in a condition to distinguish between one hat and another. Find the chance that no guest takes away his own hat.

Note by the PROPOSER.

I am loth to disagree with two of our valued contributors, who have independently arrived at the same result as the solution of this problem. It is easy to show that they are wrong; it is much harder to point out where and how they have gone astray.

If we put $m = 0$, we get the old question of letters and envelopes, the result of which is known to be $1/2! - 1/3! + \dots \pm 1/n!$. Now if in the result given in the *Reprint*, New Series, Vol. VI., p. 113, we put $m = 0$, we get $(n-1)^n/n^n$, which is therefore manifestly wrong. The method by which I solved the question has already been sufficiently indicated in the Algebraical Note of mine which appears in *The Educational Times*, November, 1904, and in the *Reprint*, New Series, Vol. VII., p. 93. But I can show by two different methods what the chance really is that the first two men to leave take wrong hats. For simplicity I will take $m = 0$, though there is no difficulty in arguing the matter when $m \neq 0$.

First method.—A. may take B.'s hat—chance $1/n$; in this case B. is sure to go wrong. Thus the chance that A. takes B.'s hat and B. does not take his own is $1/n$. Again, A. may take a wrong hat (though not B.'s)—chance $(n-2)/n$; in this case B. has also $n-2$ wrong hats to choose from, and the chance he selects a wrong one is $(n-2)/(n-1)$. Thus the chance that A. and B. take wrong hats is

$$1/n + (n-2)^2/[n(n-1)] \text{ or } (n^2 - 3n + 3)/[n(n-1)].$$

Second method.—There is one way of their going wrong in which they simply exchange hats: put this aside for the present. Then A. can choose $n-1$ wrong hats; and B. (who is debarred, for the present, from choosing A.'s) may choose $n-2$ wrong hats. Thus the total number of ways in which A. and B. may choose wrong hats is $(n-1)(n-2) + 1$, and the chance that they do choose wrong hats is, as before,

$$(n^2 - 3n + 3)/[n(n-1)].$$

I have not the leisure just now to devote to the matter; but I should be very glad to get from some of our contributors a definite reason why the solutions published are wrong and where the two solvers have made a mistake. I have a vague idea; its vagueness is precisely what I want to get rid of. So far as I can see, however, the question cannot be solved by any method analogous to that employed; for we do not seem to be any nearer to a solution when we have discovered the chance that the first two or, for that matter, the first r guests have chosen wrong hats.

10872. (Professor HUDSON, M.A.)—A paraboloid of revolution floats with the lowest point of its base in the surface of a fluid, and its axis inclined at an angle θ to the horizon. Find its height and specific gravity.

Solution by FRANCES E. CAVE.

Let h be the height, $y^2 + z^2 = 4ax$ the equation of the paraboloid, $z + \sqrt{4ah} + (x-h)\tan\theta = 0$ the equation of the plane of flotation, V the centre of section, and PV the corresponding diameter. The centre of gravity of the solid is $(\frac{2}{3}h, 0, 0)$, and the centre of buoyancy is $[\frac{2}{3}h - \frac{4}{3}\sqrt{ah}\cot\theta + \frac{2}{3}a\cot^2\theta, 0, -2a\cot\theta]$. The join of these is perpendicular to the plane of flotation; therefore $h = \frac{1}{10}a(6\tan\theta + 5\cot^2\theta)^2$.

Volume immersed $= 2a\pi PV^2 = 2a\pi[h - 2\sqrt{ah}\cot\theta + a\cot^2\theta]^2$; therefore

$$\text{specific gravity} = \left(\frac{h - 2\sqrt{ah}\cot\theta + a\cot^2\theta}{h} \right)^2 = \left(\frac{1 + 5\sin^2\theta}{5 + \sin^2\theta} \right)^4.$$

15682. (J. J. BARNIVILLE, B.A.)—Having $u_n + 2u_{n+1} + u_{n+2} = u_{n+3}$, prove that

$$\frac{1.2.5}{1.2.3.4} + \frac{3.5.10}{1.4.6.9} + \frac{6.10.22}{3.9.13.19} + \frac{13.22.47}{6.19.28.41} + \dots = \frac{3}{2};$$

$$\frac{2.3.7}{1.3.4.6} + \frac{4.7.15}{2.6.9.13} + \frac{9.15.32}{4.13.19.28} + \frac{19.32.69}{9.28.41.60} + \dots = \frac{7}{6}.$$

Solution by C. M. ROSS.

1. The scale of relation of the series 2, 5, 10, 22, 47, ... is

$$u_n + 2u_{n+1} + u_{n+2} = u_{n+3};$$

however, it is better to find the scale of relation of 1, 2, 3, 4, 6, 9, If $u_0, u_1, u_2, u_3, u_4, \dots$ denote it, the required scale is $u_{n+3} = u_{n+2} + u_n$. Then

$$\frac{1.2.5}{1.2.3.4} = \frac{(u_1 - u_0)(u_3 - u_1)(u_3 + u_0)}{u_0 u_1 u_2 u_3}$$

$$= \frac{[u_1 u_3 (u_3 - u_1) - u_0 u_1 (u_1 - u_0) - u_0 u_3 (u_3 + u_0) + 2u_0 u_1 u_3]}{u_0 u_1 u_2 u_3}$$

$$= \frac{[u_1 u_3 (u_2 - u_0) - u_0 u_1 (u_3 - u_2) - u_0 u_3 (u_1 + u_2) + 2u_0 u_1 u_3]}{u_0 u_1 u_2 u_3}$$

$$= \frac{1}{u_0} - \frac{1}{u_1} - \frac{1}{u_2} + \frac{1}{u_3}.$$

Similarly $\frac{3.5.10}{1.4.6.9} = \frac{1}{u_0} - \frac{1}{u_3} - \frac{1}{u_4} + \frac{1}{u_5},$

and so on; therefore, by addition,

$$S_\infty = \frac{2}{u_0} - \frac{1}{u_1} = \frac{3}{2}.$$

2. Again

$$\frac{2.3.7}{1.3.4.6} = \frac{1}{u_0} - \frac{1}{u_2} - \frac{1}{u_3} + \frac{1}{u_4},$$

$$\frac{4.7.15}{2.6.9.13} = \frac{1}{u_2} - \frac{1}{u_4} - \frac{1}{u_5} + \frac{1}{u_6},$$

and so on; therefore, by addition,

$$S_\infty = \frac{1}{u_0} + \frac{1}{u_4} = \frac{7}{6}.$$

15674. (W. F. BEARD, M.A.)—TP, TQ are tangents, and TAB a secant, to a circle; any circle through AB cuts BP, BQ at C, D. Prove that PQ bisects CD.

Solutions (I.) by R. F. DAVIS, M.A.; (II.) by the PROPOSER; (III.) by A. W. T.; (IV.) by M. V. A. SASTRIS, B.A.

(I.) Let PQ, CD intersect in O. Since BCAD is cyclic, the angles ACD, ABD are equal. Thus the angles ACO, APO are also equal, and OAPC is cyclic. The triangles AOC, AQB are therefore directly similar, and $OC : OA = QB : QA = TQ : TA$. In precisely similar fashion it can be shown that $OD : OA = TP : TA$. Hence $OC = OD$.

(II.) Join AC, AP, AQ, AD.

$$\angle AQD = \angle APC,$$

$$\angle ADQ = \angle ACP$$

(Euc. III. 22); therefore the triangles ADQ, ACP are similar; therefore

$$DQ/AQ = CP/AP \dots (1).$$

From similar triangles ATP, PTB,

$$AP/TP = PB/BT,$$

and similarly

$$AQ/TQ = QB/BT.$$

But $TP = TQ$;

therefore

$$AP/PB = AQ/QB;$$

therefore, from (1),

$$DQ/QB = CP/PB.$$

But, by Menelaus' theorem, $CE/ED \cdot DQ/QB \cdot BP/PC = 1$; therefore $CE = ED$. [Rest in *Reprint*.]

15633. (JAMES BLAIKIE, M.A.)—If a straight line drawn through the circum-centre of a triangle ABC meet BC, CA, AB in P, Q, R, prove that the circles described on AP, BQ, CR as diameters concur in two points, one on the circum-circle, the other on the nine-point circle, and that their common chord passes through the orthocentre.

Solution by the PROPOSER.

Draw the diameters BOB', COC'. Join B'Q, C'R and produce them to meet in X. Then, by Pascal's theorem (converse), since ABB'XC'C is a hexagon and since the intersection of the diagonals Q, O, R are collinear, X is a point on the circle ABC. The angles BXB', CXC' are right angles, being angles in semicircles. Therefore the semicircles on BQ, CR as diameters pass through X. Similarly the circle on AP as diameter passes through X. Let the circle BXQ meet AC in M and let CXR meet AB in N. Then BM, CN are perpendicular to AC, AB, and intersect in H. Let XH meet BXQ in Y. Then

$$HX \cdot HY = BH \cdot HM = CH \cdot HN,$$

since B, M, N, C are concyclic; therefore Y is a point on CXR; that is, the circles meet on XH. Also $XH \cdot HY$ is constant; therefore Y is the inverse of X and its locus is a circle, since the locus of X is a circle. Also, when X coincides with A, B, C, Y coincides with the feet of the altitudes; therefore the locus of Y is the nine-point circle.

15310. (R. TUCKER, M.A.)—PF and QE are the radii of curvature at the extremities of a focal chord of a parabola. Show that PE and QF produced intersect on the hyperbola $2x^2 - y^2 = 4ax$.

Solution by the PROPOSER.

Let PF, QE be the radii of curvature; then the equations to QF, PE are

$$y(3m^2 + 2 - m'^2) + 2(m^3 + m')x = 4a(m' - m)$$

and

$$y(3m'^2 + 2 - m^2) + 2(m'^3 + m)x = 4a(m - m'),$$

with the relation $mm' = -1$. Adding, we get

$$y + (m' + m)x = 0.$$

Subtracting,

$$2y(m' + m) + x[(m' + m)^2 + 2] = 4a.$$

Eliminating $m' + m$, we get $2x^2 - y^2 = 4ax$.

14073. (Professor S. SIRCOM, M.A.)—If n is a positive integer, prove that

$$\int_0^\pi \frac{\sin^n \theta}{\theta^n} d\theta = \frac{1}{(n-1)! 2^n} \left\{ n^{n-1} - n(n-2)^{n-1} + \frac{n(n-1)}{1 \cdot 2} (n-4)^{n-1} - \frac{n(n-1)(n-2)}{1 \cdot 2 \cdot 3} (n-6)^{n-1} + \dots \right\} \pi.$$

[I have only seen this theorem worked for low values of n .]

Additional Solution and Remarks by Professor NANSON.

Integrating by parts, we have

$$\int_0^\pi \frac{\sin^n \theta}{\theta^n} d\theta = \frac{1}{(n-1)!} \int_0^\pi \frac{1}{\theta} \left(\frac{d}{d\theta} \right)^{n-1} \sin^n \theta d\theta,$$

the integrated terms clearly vanishing at the limits. Now

$$\sin^n \theta = \frac{1}{2^{n-1}} \sum n_r \cos(n-2r)(\theta - \frac{1}{2}\pi) + \text{const.};$$

therefore $\left(\frac{d}{d\theta} \right)^{n-1} \sin^n \theta = \frac{1}{2^{n-1}} \sum (-1)^r n_r (n-2r)^{n-1} \sin(n-2r)\theta$;

therefore $\int_0^\pi \frac{\sin^n \theta}{\theta^n} d\theta = \frac{\pi}{(n-1)! 2^n} \sum (-1)^r n_r (n-2r)^{n-1}$.

Another solution is given in *Reprint*, Vol. LXXI., pp. 115-7, in regard to which reference should be made to a paper by Dr. Glaisher, *Proc. London Math. Soc.*, Vol. IV., pp. 291-302.

15637. (R. CHARTRES.)—Three random points are taken in the sides of a triangle, one in each side, and joined. Find the mean value of the square of the area of the triangle thus formed. Elementary proof wanted.

Solution by the PROPOSER.

Let $\Delta - x = y$,

$$M(x^2) = Mx(\Delta - y)$$

$$= \frac{1}{4}\Delta^2 - \frac{1}{3}\Delta^2$$

$$= \frac{1}{12}\Delta^2.$$

15633. (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—Find the product of n terms of the series $2 + 34 + 246 + 1028 + 3130 + \dots$ by n terms of the series $0 + 30 + 240 + 1020 + 3120 + \dots$.

Solution by C. M. ROSS.

The first series may be written

$$1 + 1^5 + (2 + 2^5) + (3 + 3^5) + (4 + 4^5) + (5 + 5^5) + \dots = \sum n^5 + \sum n.$$

Similarly, the second series is equal to

$$1^5 - 1 + (2^5 - 2) + (3^5 - 3) + (4^5 - 4) + (5^5 - 5) + \dots = \sum n^5 - \sum n.$$

If S and S_1 are the required sums of above,

$$SS_1 = (\sum n^5)^2 - (\sum n)^2 = \left[\frac{1}{12} n^2 (n+1)^2 (2n^2 + 2n - 1) \right]^2 - \left[\frac{1}{2} n (n+1) \right]^2$$

$$= \frac{1}{144} n^2 (n+1)^2 [n^2 (n+1)^2 (2n^2 + 2n - 1)^2 - 36],$$

which is the required product.

15635. (Professor COCHEZ.)—

On donne un triangle ABC; on porte sur AB et AC les segments $\Delta\beta$, $\Delta\gamma$ tels que $\Delta\beta/\Delta\gamma = K$, puis $\beta\beta' = \Delta\beta$ et $\gamma\gamma' = \Delta\gamma$. Trouver le lieu du point M de rencontre des droites $\beta\gamma$ et $\beta'\gamma'$.

Solution by R. TUCKER, M.A., and A. M. NESBITT, M.A.

Take AB, AC for axes and put $\Delta\beta = h$, $\Delta\gamma = k$; then

$$x/h + y/k = 1, \quad x/(c+h) + y/(b+k) = 1, \quad h = k\lambda \dots (\text{i., ii., iii.}).$$

From (i.) and (ii.), $cx/(c+h) + by/(b+k) = 0$; and, from (i.), $x + \lambda y = h$; whence, eliminating k , we get $(x + \lambda y)(bc\lambda + cx + b\lambda^2 y) = 0$; whence the locus is $x/b\lambda + \lambda y/c = -1$.

10041. (Professor EMMERICH, Ph.D.)—K being the symmedian point of the triangle ABC, we have $AK + BK + CK \equiv (a + b + c)/\sqrt{3}$.

Remarks by Professor SANJANA, M.A., and others.

The result is inaccurate. Drawing the perpendiculars from G and K to AB and AC respectively, we have the triangles AGX, AKY similar, as G and K are isogonal conjugates. Hence

$$AK/AG = KY/GX = \lambda b/(\mu/C);$$

therefore

$$AK = (\lambda/\mu) bc \cdot AG = \frac{2}{3} (\lambda/\mu) bcm_1,$$

where m_1 is the median from A. Also

$$\lambda = \frac{1}{2} \tan \omega, \quad \mu = \frac{2}{3} \Delta; \quad \text{so that, finally,}$$

$$AK = \frac{1}{3} \frac{\tan \omega}{\Delta} bcm_1 = \frac{2bcm_1}{a^2 + b^2 + c^2} = \frac{bc \sqrt{(b^2 + c^2 + 2bc \cos A)}}{a^2 + b^2 + c^2}.$$

Hence $\sum AK = [\sum bc \sqrt{(b^2 + c^2 + 2bc \cos A)}] / (a^2 + b^2 + c^2)$, which is not equal to $\sum a/\sqrt{3}$ when the triangle is general.

15564. (A. M. NESBITT, M.A.)—The normals at the extremities of a chord of an ellipse meet in the curve. Prove that the pole of the chord lies on a concentric ellipse.

Solution by FRANCES E. CAVE and W. F. BEARD, M.A.

(I.) Let (h, k) be the intersection of the normals, (ξ, η) the pole. Then the polar of (ξ, η) and a certain chord through (h, k) form a conic through the four feet of the normals; therefore

$$x^2/a^2 + y^2/b^2 - 1 + \lambda[(a^2 - b^2)xy - a^2hy + b^2kx] \equiv (x\xi/a^2 + y\eta/b^2 - 1)[A(x-h) + B(y-k)]$$

for suitable values of λ, A, B . Equating coefficients and eliminating,

$$(a^2 - b^2)/(a^2\eta^2 + b^2\xi^2) = k/[\eta(\xi^2 - a^2)] = -1/(\xi^2 - \eta^2 - a^2 + b^2);$$

therefore the pole lies on $a^2x^2 + b^2y^2 = (a^2 - b^2)^2$.

QUESTIONS FOR SOLUTION.

15714. (ROBERT W. D. CHRISTIE.)—Multiply 567×543 in three operations and prove the general theory. (Either number at top.)

Ex.—	5 67	5 43
	5 43	5 67
	<u>3078.21</u>	<u>3080.21</u>
	6	-1 4
	<u>3078 81</u>	<u>3078 81</u>

15715. (Professor E. B. ESCOTT.)—In Fermat's (Pell's) equation $x^2 - Ny^2 = 1$, where N is a prime of the form $4n + 3$, prove that the middle partial quotient of \sqrt{N} expressed as a continued fraction is always odd and equal to a or $a - 1$ according as a is odd or even (a being the integral part of \sqrt{N}). In the last case the quotient immediately preceding the middle quotient is unity.

15716. (A. H. BELL.)—Given $3x + 1 = \square$ and $7x + 1 = \square$: to find four integral values of x . One of them is 5.

15717. (R. CHARTRES.)—Find integral values of x , and n ($n > 3$), so that $x^n - 1$ shall equal the product of two consecutive integers. When $n = 3$, $7^3 - 1 = 342 = 18 \cdot 19$.

15718. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find several numbers (N) expressible in scales of radix r by a single digit (say a) repeated not less than three times. ($N = aa \dots a$.)

15719. (J. J. BARNIVILLE, B.A., I.C.S.)—Having $u_n + 2u_{n+1} = u_{n+2}$, prove $\frac{2 \cdot 11 \cdot 29}{1 \cdot 3 \cdot 7 \cdot 17} + \frac{5 \cdot 27 \cdot 69}{1 \cdot 7 \cdot 17 \cdot 41} + \frac{12 \cdot 65 \cdot 167}{3 \cdot 17 \cdot 41 \cdot 99} + \dots = \frac{67}{14}$.

15720. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Find the coefficient of n^6 in the product of the two series

$$1^7 + 2^7 + 3^7 + 4^7 + \dots + (n-1)^7 + n^7, \quad 1^8 + 2^8 + 3^8 + 4^8 + \dots + (n-1)^8 + n^8.$$

15721. (Professor M. W. CROFTON, F.R.S.)—Two players A., B., whose chances of winning a game are p, q ($p + q = 1$), put down each a stake, and play on the condition that whoever wins two games running shall receive the whole. Show that in fairness their stakes ought to be in the proportion $p^2(1+q) : q^2(1+p)$.

15722. (D. BIDDLE.)—ABC is an equilateral triangle, of side a . About A, B, C, as centres, equal circles, of radius r , are described. Points P, Q, R are taken on their circumferences respectively. Find the mean area of PQR.

15723. (Professor NANSON.)—Trace the curves

$$(x^2 \pm a^2)y^2 = b^3(c - 2y).$$

15724. (S. C. BAGCHI, B.A.)—The transformation

$$\xi = \alpha x + \beta y, \quad \eta = \gamma x + \delta y$$

makes a point (ξ, η) on the curve c_2 correspond to a point (x, y) on the curve c_1 . If $\alpha\delta - \beta\gamma = \pm 1$, show that, when c_1 satisfies $\phi(\rho^3) = 0$, c_2 will satisfy the same functional equation, where ρ is the radius of curvature at a point and ϕ is the distance of the tangent at that point from the origin.

15725. (Professor NEUBERG.)—Soient α, β les perpendiculaires abaissées de deux points fixes A, B sur une droite u . Si cette droite u se déplace dans l'espace de manière qu'on ait constamment $a^2 - m^2\beta^2 = n^2$, où m et n sont des quantités fixes, il existe sur la droite AB deux points C, D dont les projections sur u sont situées sur une sphère fixe. Cas particulier de $m = 1$.

15726. (Professor SANJANA, M.A.)—Show that the normals drawn at the extremities of any chord of a parabola and terminated by the axis have equal projections upon that chord; and that these projections are constant when the chord moves so that the algebraical difference of the ordinates of the two extremities has a constant projection on the chord. Prove also that this condition is satisfied by every focal chord.

15727. (Professor COCHEZ.)—Lieu du sommet des angles droits dont les côtés sont normaux à une conique.

15728. (C. E. YOUNGMAN, M.A.)—Consider two series of coaxial circles, A and B. In general, every A touches two B's, and the points of contact trace out a bicircular quartic. Examine particular cases, especially (1) when this curve is inverse to a rectangular hyperbola, (2) when it breaks up into two circles, (3) when the two series have a circle in common. In case (2) show that the envelope of the line of centres AB is also two circles.

15729. (R. TUCKER, M.A.)—The circle $dd'k$ touches AB, AC, and the arc BC of the circle ABC (internally); the circle $ee'k'$ touches BC, BA, and the arc CA; and the circle $ff'k''$ touches CA, CB, and the arc AB. Prove (i.) ed', fe', df' are parallel to AB, BC, CA respectively; (ii.) $Cd'. Ae'. Bf' = Af. Bd. Ce$; (iii.) ρ_1 (radius of circle $dd'k$) = $r \sec^2 \frac{1}{2}A$; (iv.) Ak, Bk', Ck'' intersect in a point.

15730. (JAMES BLAIRIE, M.A.)—ABC is a triangle of which O is the circum-centre, and BC, CA, AB meet a given straight line in P, Q, R; F is the foot of the perpendicular from O to the given line; and P', Q', R' are points in the line such that F is the mid-point of PP', QQ', RR'. Prove that AP', BQ', CR' meet in a point on the circum-circle of ABC.

15731. (A. M. NESBITT, M.A.)—A circle DEFK is cut by two parallel chords DK, EF, and O is the image of D in EF. OE, OF meet the circle in X, V. Prove that the circum-centre of the triangle OXV is at the intersection of OD with the circle. Further, if OE, OF meet DK in B, C, and the circles DBE, DCF cut in A, the circle AHD will cut BC in points which are harmonic conjugates of B, C.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

1804. (N'IMPORTE.)—Three given weights (considered as having material points) are attached to the surface of a sphere. Determine the position of equilibrium of the sphere when resting on a horizontal plane. Give also the result in the particular case in which the weights are arranged in a great circle.

1930. (Professor SYLVESTER.)—A uniform ellipsoid, with fixed centre, rolls on an indefinitely rough plane. Determine the time, pressure, and friction of the plane corresponding to any given position of the body. Find also the same when the axes of the ellipsoid remain the principal axes of the body, but the principal moments of the latter are in any given ratios to one another: state the condition in order that, during the whole continuance of the motion, the pressure and friction may be *nil*, and also, in general, under what circumstances the time will be expressible by an elliptic function.

1998. (R. BALL, M.A.)—If k be the constant term in the equation of a surface, and $\Delta = 0$ the condition necessary that this surface and three others pass through a point, what is the geometrical meaning of the roots of the equation $e^{-x(d/dk)}\Delta = 0$?

2361. (Rev. R. TOWNSEND, F.R.S.)—(1) Show that the three chords of intersection of the circumscribed with the three escribed circles of a plane triangle intersect collinearly with the three corresponding sides of the triangle. (2) Prove the corresponding property for a spherical triangle.

2564. (M. COLLINS, B.A.)—A being a curve whose equation is given in the usual Cartesian rectangular co-ordinates, B the evolute of A, and C the evolute of B; required a general differential expression for the radius of curvature of C on the usual supposition of dx being taken constant, and likewise on the supposition of $dv^2 + dy^2 (= dz^2)$ being taken constant.

2611. (W. S. B. WOOLHOUSE, F.R.A.S.)—Let $1, \delta_1, \delta_2, \delta_3, \dots, \delta_n$ be

the first differences of the coefficients of the expansion of the binomial $(1+x)^{2n}$ taken as far as the central or maximum coefficient; also let $\nu = \frac{1}{2}(n+1)n$, $\nu' = \frac{1}{2}n(n-1)$, $\nu'' = \frac{1}{2}(n-1)(n-2)$, ... Then show that the algebraic function $x^\nu - \delta_1 x^{\nu'} + \delta_2 x^{\nu''} - \delta_3 x^{\nu'''} + \dots$ is divisible by $(x-1)^n$ without a remainder, and that the sum of the numerical coefficients of the quotient is $1.3.5 \dots (2n-1)$. [See Solution to Question 1894, Reprint, Vol. v., p. 113.]

 **AN ENTIRELY NEW WORK.**

THE INFANT SCHOOL: Its Principles and Methods.

By J. GUNN, M.A., D.Sc.

A HEAD TEACHER writes:—"The Infant School,' by Dr. Gunn, is a book that will be very useful to my students, and I shall be very pleased to recommend it to them. It should have a heavy sale, as there is no other book of the kind in the market. Wishing the book every success."

That there is need for a book dealing with the special problems of the Infant School the writer is strongly convinced. There are two reasons which seem to require that an attempt should be made to deal with these problems at present. In the first place, the Infant School is dealt with in too summary a fashion in most books on School Method, and the importance of its work is by no means adequately represented. In the second place, the general plan on which most School Management Text-Books are based, that of the Curriculum or subjects of study, is not a plan suited to a discussion of Infant-School Management.—*Extract from Preface.*

The work contains Fifteen Chapters, dealing with—The School—The Teacher—Child Study—The Prophets of the Infant School—The Pupil—Training: Physical, Intellectual, and Moral—Occupations—Reading—Writing—Arithmetic—Drawing—Clay Modelling and Singing.

Specimen Schemes of Work for Infants and Time Tables for Infants are also given in a full Appendix, and the book will be found to be invaluable to Teachers.

412 pages, cloth, price 3s. 6d.

Nature Studies and Fairy Tales for Infant Schools and Lower Classes.

By CATHERINE I. DODD, Lecturer in Education at the University of Manchester.

With Special Introduction by W. SCOTT COWARD, Late H.M. Inspector of Training Colleges.

 The studies in the pages of this book are more than Theoretical Lessons. They have originated in the Kindergarten and Classroom, and have formed the plan of Lessons given in Spring by students and Teachers to the little ones in the Primary School and Kindergarten, Manchester.

The theory of teaching Infants and Junior Classes is based upon the principles of Herbart and Froebel. Full directions for drawing up Notes of Lessons on the Herbartian Plan, with many specimen Notes on Literature and Nature Work, appear in the Volume.

The Work specially meets the needs of **FIRST-YEAR STUDENTS IN TRAINING COLLEGES**, and will be found invaluable to all **TEACHERS IN INFANT AND JUNIOR SCHOOLS.**

Fully Illustrated in Black and White, and 15 Coloured Plates, price 3s. 6d.

The Royal King Infant Series.

Beautifully Illustrated in Colour.

Royal King Primer I.	3d.
Royal King Primer II.	4d.
Royal King Infant Reader I.	5d.
Royal King Infant Reader II.	6d.
Royal King Infant Reader III.	7d.

These charming little Books are set in a large new type, to avoid strain on the children's eyes, and the pictures have been specially designed for this series.

Nelson's Royal King Primer Reading Sheets.

Corresponding to the Reading Pages of the "Royal King Primer I."

Printed in Two Colours on Strong Manilla Paper, Mounted on Roller to turn over. Twenty-two Sheets, price 12s. 6d.

Also supplied on Linen, with Metal at bottom, price 25s.

The type used has been specially designed for these Sheets with a view to **avoid all strain** on the eyes of young readers, and at the same time to preserve the **proportions of letters and spaces** which are recognized as most graceful. In these respects it is superior to anything hitherto used on Wall Sheets. The pictures are reproduced with a special view to **simplicity and clearness.**

ELEMENTARY GRAPHS. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. 6d. net.

EXAMPLES IN PRACTICAL GEOMETRY AND MENSURATION. By J. W. MARSHALL, M.A., and C. O. TUCKEY, M.A. With or without Answers, 1s. 6d.

A NEW TRIGONOMETRY FOR SCHOOLS. By W. G. BORCHARDT, M.A., and the Rev. A. D. PERROTT, M.A. 4s. 6d. Also in Two Parts, 2s. 6d. each.

The authors hope that this book will supply the need felt for a Trigonometry based on *four-figure Logarithm Tables*, the authorities responsible for the various Cambridge Examinations, Army Entrance Examinations, &c., now dispensing with seven-figure Logarithms. The book lays stress on the more *practical parts* of the subject. *Squared paper* is freely made use of, and 600 Miscellaneous Examples are provided.

BELL'S CONCISE LATIN COURSE FOR THE FIRST YEAR. By E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford, and J. G. SPENCER, B.A., Assistant Master at St. Paul's Preparatory School. Crown 8vo, 2s.

*** Translations to any of the above Classics. 1s. each. (*Bell's Classical Translations.*)

London: GEORGE BELL & SONS, York House, Portugal Street, W.C.

A SELECTION OF RELFE BROTHERS' BOOKS

For Cambridge Local, College of Preceptors' Examinations, &c., 1905.

SHORT FRENCH EXAMINATION PAPERS (110).

Each containing Six Idiomatic Sentences to render into French.
Very useful for Oral Work. Second Edition. Price 2s. 6d., cloth.

"A very useful set of questions."—*Modern Language Quarterly*.

"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers, 6s. net. (A list of errata is issued with this.) By H. R. LADELL, M.A., F.R.G.S., late Head Master of the London International College, Isleworth.

THE PUBLIC SCHOOL SPELLING CARD.

Fortieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

FRENCH ESSENTIALS AND FRENCH CONVERSATION SENTENCES.

Third Edition. Price 2s., cloth; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

THE LOCAL EXAMINATION PHYSIOGRAPHY. By W. J. PERRY, M.A., LL.D. With Illustrations and Diagrams. Crown 8vo, cloth, 2s. Specially written for Candidates for the Local Examinations.

A JUNIOR FORM ALGEBRA. By R. B. MORGAN, Author of "Graphs" and "Exercises in Geometry." On up-to-date lines. With 14 Diagrams. Fully sufficient for the Junior Locals. Crown 8vo, cloth, 1s. 6d.

THE CHARTERHOUSE ENGLISH GRAMMAR. By Rev. A. MACRAE, B.A. (Emanuel School, Wandsworth Common). 168 pp. Crown 8vo, full cloth, 1s. 4d.

CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS,
CHRISTMAS, 1904.

The list of successful candidates at the Colonial and Foreign Centres will be published in the March number of "The Educational Times."

[Throughout the following Lists, bracketing of names implies equality.]

PRIZES.

General Proficiency.

FIRST CLASS [OR SENIOR].

- | | |
|--|--|
| 1. Coombes, C. S.
<i>(Isbister Prize.)</i> | Mr. Rider, Devonport High School, Stoke. |
| 2. Pfeleiderer, R. A.
<i>(Pinches Prize.)</i> | Mr. Bayley, Wellington College, Salop. |
| 3. Woodward, Miss A. | Private tuition. |
| 4. Hall, L. E. | Mr. Hawe, The High School for Boys, Croydon. |

SECOND CLASS [OR JUNIOR].

- | | |
|---------------------------------------|--|
| 1. Onions, C. | Mr. Bayley, Wellington College, Salop. |
| 2. Redfern, Miss D. L. | Miss Rance, Commercial Travellers' School, Pinner. |
| 3. (Bilson, W. H. A.
Bland, A. J.) | Dr. G. J. Parks, Council Secondary School, Portsmouth.
Mr. Hansen Bay, Deacon's School, Peterborough. |

THIRD CLASS.

- | | |
|-------------------------|---|
| 1. Wetherall, G. C. | Mr. Skey, Cliftonville College, Margate. |
| 2. Horsefield, C. S. W. | Mr. Cowen, Littleton House School, Knowle, Bristol. |
| 3. Cliff, H. S. | Mr. Coombe, High School, Torquay. |
| 4. Bennell, Miss M. | Miss Cowdroy, Crouch End High School, Weston Park, N. |

English Subjects.

- | | |
|-----------------------|---|
| 1. Coombes, C. S. | Mr. Rider, Devonport High School, Stoke. |
| 2. Cooper, Miss K. D. | Miss Conder, Milton Mount College, Gravesend. |

Mathematics.*

- | | |
|---|---|
| 1. (Nixon, J. C.
Pfeleiderer, R. A.) | Mr. Freeman, Technical Institute, Portsmouth.
Mr. Bayley, Wellington College, Salop. |
|---|---|

Modern Foreign Languages.

- | | |
|--|--|
| 1. Spear, J. H. | Mr. Dymond, Hoe Grammar School, Plymouth. |
| 2. (Preece, J. F.
Richards, R. S. H.) | Mr. Richards, Stoke Newington Grammar School.
Mr. Richards, Stoke Newington Grammar School. |

Classics.

- | | |
|----------------------|------------------|
| 1. Woodward, Miss A. | Private tuition. |
| 2. [Not awarded.] | |

Natural Sciences.

- | | |
|-----------------------------------|--|
| 1. (Akers, W. A.
Nixon, J. C.) | Rev. A. H. Cooke, Aldenham School, Elstree.
Mr. Freeman, Technical Institute, Portsmouth. |
|-----------------------------------|--|

Taylor-Jones Prize for Scripture History.

- | | |
|------------------|-------------------------------------|
| Nicolas, Miss V. | Miss Blake, The Royal School, Bath. |
|------------------|-------------------------------------|

Pitman Medals for Shorthand.

- | | |
|--|--|
| 1. Redfern, Miss D. L.
<i>(Silver Medal.)</i> | Miss Rance, Commercial Travellers' School, Pinner. |
| 2. Barlow, H. R.
<i>(Bronze Medal.)</i> | Private tuition. |

* C. S. Coombes, Devonport High School, Stoke, was disqualified for the First Prize for Mathematics in consequence of having obtained it at a previous Examination.

The following is a List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on FIRST CLASS PAPERS. (Only those who obtained Distinction are included.)

Scripture History.

- | | | |
|--|--|--|
| 1. Nicolas, Miss V. | Miss Blake, The Royal School, Bath. | |
| 2. (Etches, Miss A. B.
Hobson, Miss M.
Jacoby, Miss E. G.) | Mrs. Hiatt, Ladies' College, Wellington, Salop.
Private tuition.
Miss Cowdroy, Crouch End High School, Weston Park, N. | |
| | Maitland, J. P. | Mr. Hawe, The High School for Boys, Croydon. |
| | Ridler, Miss J. B.
Tucker, Miss M. H. | Miss Conder, Milton Mount College, Gravesend.
Miss Conder, Milton Mount College, Gravesend. |

English Language.

- | | | |
|--|--|--|
| 1. Nicolas, Miss V. | Miss Blake, The Royal School, Bath. | |
| 2. (Cooper, Miss K. D.
Hobson, Miss M.
Jacoby, Miss E. G.) | Miss Conder, Milton Mount College, Gravesend.
Private tuition.
Miss Cowdroy, Crouch End High School, Weston Park, N. | |
| | Pfeleiderer, R. A. | Mr. Bayley, Wellington College, Salop. |

English History.

- | | |
|----------------------|--|
| 1. Nicolas, Miss V. | Miss Blake, The Royal School, Bath. |
| 2. Seymour-Jones, A. | Mr. Bayley, Wellington College, Salop. |

Geography.

- | | |
|-------------------|--|
| 1. Coombes, C. S. | Mr. Rider, Devonport High School, Stoke. |
|-------------------|--|

Arithmetic.

- | | |
|-------------------|--|
| 1. Bennett, W. | Mr. Rider, Devonport High School, Stoke. |
| 2. Coombes, C. S. | Mr. Rider, Devonport High School, Stoke. |

Algebra.

- | | |
|------------------------------------|--|
| 1. Peters, W. H.
Coombes, C. S. | Private tuition.
Mr. Rider, Devonport High School, Stoke. |
| 2. (Frazer, W. M.
Hall, L. E.) | Mr. Oakes, Oakes Institute, Walton, Liverpool. |
| | Riggall, F. S. |

Geometry.

- | | |
|---------------------------------|--|
| 1. Hall, L. E. | Mr. Hawe, The High School for Boys, Croydon. |
| 2. (Ballard, A. L.
Bate, A.) | Mr. Hardy, Dunheved College, Launceston. |
| | Rev. Dr. Scott, Mercers' School, Holborn, E.C. |

Trigonometry.

- | | |
|-------------------|--|
| 1. Coombes, C. S. | Mr. Rider, Devonport High School, Stoke. |
|-------------------|--|

Mechanics.

- | | |
|-----------------------|--|
| 1. Barnett, E. de B. | Private tuition. |
| 2. Pfeleiderer, R. A. | Mr. Bayley, Wellington College, Salop. |

Book-keeping.

- | | |
|-------------------------------------|--|
| 1. Bennett, W. | Mr. Rider, Devonport High School, Stoke. |
| 2. (Bisson, W. G.
Thomas, W. D.) | Messrs. Davey, Oxenford House, St. Lawrence, Jersey.
Mr. Staddon, St. Winifred's School, Torquay. |

Mensuration.

- | | |
|--------------------------------|--|
| 1. Frazer, W. M. | Mr. Oakes, Oakes Institute, Walton, Liverpool. |
| 2. (Bennett, W.
Onions, C.) | Mr. Rider, Devonport High School, Stoke.
Mr. Bayley, Wellington College, Salop. |

French.

- | | |
|------------------------------------|---|
| 1. (Bisson, J. R.
Spear, J. H.) | Private tuition.
Mr. Dymond, Hoe Grammar School, Plymouth. |
|------------------------------------|---|

German.

- | | |
|--|--|
| 1. (Ambrose, Miss N.
Thiemann, F. W.) | Mrs. Needham, The Limes, Buckhurst Hill.
Mr. Haynes, Highbury High School, N. |
|--|--|

Italian.

- | | |
|------------------|--|
| 1. Forbes, V. W. | Mr. Clayton, Warwick House School, Southsea. |
|------------------|--|

Spanish.		Magnetism and Electricity.		Music.	
1. Spear, J. H.	Mr. Dymond, Hoe Grammar School, Plymouth.	1. Nixon, J. C.	Mr. Freeman, Technical Institute, Portsmouth.	2. {	Etches, Miss A. B. Mrs. Hiatt, Ladies' College, Wellington, Salop.
		2. Lake, N. C.	Mr. Brown, Municipal Technical School, Plymouth.		Read, Miss M. The Misses Waller & Woodfall, Highfield School, Croydon.

GEO. M. HAMMER & CO., LTD., 370 STRAND, LONDON, W.C.

EDUCATIONAL WORKS by A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR BOYS, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, of Goldsmith's "Deserted Village," set out into Principal and Subordinate Sentences, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR GIRLS, based on Grammatical Analysis; with a choice Selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a *Girl*] showing the proper attitude in Reading.

Ninth Edition. 12mo, price 1s.; or, with Answers, 1s. 6d.

UNITARY ARITHMETIC. Embodying the First Book of Arithmetic of the Irish National Board. With numerous additional Examples, and selections from recent Examination Papers; and a full exposition of the "Unitary" System, or Method of Working Arithmetic *without rules*.

** In this Edition, Questions in Proportion, Practice, Interest, Stocks, Partnership, Profit and Loss, &c., are, by the "Unitary" Method, solved by a single rule.

Sixth Edition. 12mo, price 3s. 6d.

THE COLLEGE EUCLID: Comprising the First Six and portions of the Eleventh and Twelfth Books read at the Universities. Chiefly from the Text of Dr. SIMSON. With a new arrangement of the Figures and Demonstrations; the Enunciations of the Propositions separately for Self-Examination, apart from the Text; Notes and Questions on each Book; and a Series of Geometrical Problems for Solution, from the most recent University Examination Papers.

Fifteenth Edition. 12mo, price 2s. 6d.

THE SCHOOL EUCLID: Comprising the First Four Books. With Questions, Geometrical Exercises, &c.

THE SCHOOL EUCLID, Books I. & II. With Questions, Exercises, &c. 12mo, price 1s. 6d.

THE SCHOOL EUCLID, Book I. With Questions, &c. 12mo, price 1s.

New Edition. 12mo, price 9d.

THE COLLEGE AND SCHOOL EXAMINER IN EUCLID, containing the Enunciations of all the Propositions in the College and School Editions, Questions on the Definitions, Arithmetical and Algebraical Demonstrations of the Propositions in Books II. and V., and a large collection of Geometrical Problems for Solution. Designed for Class and Self-Examination, and adapted to all Editions of Euclid.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

THE GEOMETRICAL COPY-BOOK. Arranged for writing out the Propositions of Euclid in the Abbreviated Symbolical Form adopted in the Universities and Public Schools.

Third Edition. 12mo, price 1s. 6d.

FIRST STEPS TO EUCLID: Comprising the Propositions of Book I., prepared for writing out, with a recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

Sixteenth Edition, with Map. 12mo.

CÆSAR'S COMMENTARIES on the GALLIC WAR.

BOOKS I.-V. With Notes Critical and Explanatory, a Vocabulary of all the Words in the Text, and *Easy Reading Lessons for Beginners* price 3s. 6d.

BOOKS I.-VII. do. do. 4s. 6d.

Do. (without the Reading Lessons) 4s. 0d.

Twenty-fifth Edition.

BOOK I. (with Vocabulary, Reading Lessons, &c.) 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

XENOPHON'S ANABASIS, Books I. to III. With Notes, Vocabulary of all the Words in the Text, and a *Series of Easy Reading Lessons for Beginners*. Designed as a First Greek Reading Book in Schools.

Nineteenth Edition. 16mo, 1s. 6d.; or in Two Parts, price 9d. each.

THE ELEMENTS OF ENGLISH GRAMMAR AND COMPOSITION, including the Analysis of Sentences, simplified for Beginners.

Tenth Edition. 12mo, price 6d.

A FIRST BOOK OF ENGLISH GRAMMAR, GEOGRAPHY, AND ENGLISH HISTORY. With Arithmetical Tables, Dates, &c.

Eleventh Edition. 12mo, price 1s. 6d.

FIRST STEPS IN READING AND LEARNING: a Reading-Book for Beginners, designed to utilize the time of those learning to read, by presenting, in a series of Easy Reading and Writing Lessons, a First Course of Scripture and English History, Geography, English Grammar, Spelling, and Arithmetic, interspersed with Moral Lessons and Simple Poetry for Repetition.

New Edition. 18mo, price 9d.

THE ELEMENTS OF BOOK-KEEPING, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

4to, 1s. each.

ENGRAVED ACCOUNT BOOKS. Ruled and Interleaved for Copying, adapted to the above.

No. I. Business Forms. 1. Bills of Parcels and Book Debts. 2. Invoices. 3. Account Sales. 4. Receipts. 5. Promissory Notes and Drafts. 6. Bills of Exchange.

No. II. Day-Book and Cash-Book.

No. III. Ledger, Index, and Balance Sheet.

Tenth Edition. 12mo, price 3s. 6d.

THE ILLUSTRATED PUBLIC SCHOOL SPEAKER

AND READER, based on Grammatical Analysis, comprising a choice Selection of pieces for Reading and Recitation, annotated for Expression, Emphasis, and Pauses, and illustrated by Diagrams and Figures exhibiting to the eye the appropriate gestures and positions; to which is added a selection of Greek, Latin, French, and German Extracts, suitable for "Speech Days" at Public Schools.

THE EDUCATIONAL TIMES,

AND

Journal of the College of Preceptors.

Vol. LVIII.] New Series, No. 527.

MARCH 1, 1905.

{ Published Monthly, price, to Non-Members, 6d.; by Post, 7d.
Annual Subscription, 7s.

COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

The next Monthly Meeting of the Members will take place on Wednesday, the 15th of March, at 7.30 p.m., when Prof. L. W. LYDE, M.A., F.R.G.S., will read a Paper on "The Teaching of Geography to Higher Classes," illustrated by a Lesson on the Geography of Japan.

A Discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., *Secretary*.

COLLEGE OF PRECEPTORS.— EXAMINATIONS, 1905.

1. DIPLOMAS.—The next Examination of Teachers for the Diplomas of the College will commence on the 29th of August, 1905.

2. PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.—The next Practical Examination will be held in May, 1905.

3. CERTIFICATE EXAMINATIONS.—The Midsummer Examination for Certificates will commence on the 27th of June.

4. LOWER FORMS EXAMINATIONS.—The Midsummer Examination will commence on the 27th of June.

5. PROFESSIONAL PRELIMINARY EXAMINATIONS.—These Examinations are held in March and September. The Spring Examination in 1905 will commence on the 7th of March.

6. INSPECTION AND EXAMINATION OF SCHOOLS.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

PRIZES.

Diploma Examination.—The following Prizes will be offered for competition:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5. The Doreck Scholarship of £20 will be awarded on the results of the Christmas Examination.

Certificate Examination.—Prizes will be awarded as follows, subject to the conditions stated in the Regulations:—

First Class.—Four Prizes for General Proficiency; two each for Classics, Mathematics, Modern Languages, Natural Sciences, and English subjects; one for Scripture History.

Second Class.—Four Prizes for General Proficiency.

Third Class.—Four Prizes for General Proficiency.

Two Medals will also be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary*.

E. LAYMAN, Esq.,

1 Garden Court, Temple, E.C.

ARMY SCHOOLMASTERS.—There

are some Vacancies in the Corps of Army Schoolmasters. Civilian Schoolmasters only will be accepted who have passed the Certificate Examination in the First or Second Division and who hold a Certificate qualifying them to Superintend Pupil-Teachers from the Board of Education. Students in training colleges will also be accepted under certain conditions. Candidates must not be over 24 years of age. Accepted candidates will be required to join as soon as convenient. Further particulars can be obtained on application (in writing) to the A.A.G. ARMY SCHOOLS, War Office, 68 Victoria Street, London, S.W.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, Private Schools' Association, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m.

Hours for interviews—10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatario, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

TO PRINCIPALS OF SCHOOLS.

—The Rev. G. E. MACKIE, Chief Secretary and Inspector of the Church Schools Company, is prepared to visit Schools in any part of England and confidentially advise Principals on all matters connected with Recognition of Schools, Registration of Teachers, Government Grants, &c. Consultations by post or at the Church House, Westminster.

STUDENTS for the DUKE of YORK'S

ROYAL MILITARY SCHOOL, CHELSEA, and the ROYAL HIBERNIAN MILITARY SCHOOL, DUBLIN.—A COMPETITIVE EXAMINATION for Students at these institutions will take place in London and Dublin in May next. Candidates must be between 16 and 19 years of age on the 30th of April next. Further particulars may be obtained on application in writing (in unstamped letter) to the A.A.G. ARMY SCHOOLS, War Office, 68 Victoria Street, London, S.W., by whom applications will be received not later than 15th April next. Students at these establishments have the privilege of competing for the appointment of Army Schoolmaster.

COUNTY OF LONDON.

IN connexion with the new Scholarship Scheme the Council has decided to appoint a CHIEF EXAMINER and TWENTY ASSISTANT EXAMINERS to examine in Arithmetic and English Composition. The Candidates for Scholarships will be boys and girls between eleven and twelve years of age.

The duties of the Chief Examiner will be to correlate the system of marking adopted by the various Assistant Examiners, to attend the meetings of the Board of Examiners, to set the papers if required, or to advise generally with regard to the setting of the papers, to advise with regard to the examination arrangements, and to be generally responsible to the Executive Officer for the carrying out of the actual examining work, as distinct from administrative organization.

The duties of the Assistant Examiners will be to look over about two thousand papers and to mark them in accordance with the general directions of the Chief Examiner.

The Examination will be held at the end of April, and it is essential that the results should be received not later than the second week in June.

The Chief Examiner will be paid a fee of 100 guineas, and each Assistant Examiner a fee of 50 guineas (to be increased at the rate of 6d. a paper in the event of the number of papers to be corrected by each examiner exceeding 2,000). No teacher serving in a public elementary school in London will be eligible for appointment.

Forms of application, which must be returned not later than 7th March, 1905, and any further particulars, can be obtained from the CLERK OF THE LONDON COUNTY COUNCIL, Education Offices, Victoria Embankment, W.C.

G. L. GOMME,

Clerk of the London County Council.

Thomas Nelson & Sons' Royal School Series.

AN ENTIRELY NEW WORK.

The Infant School: Its Principles and Methods.

By J. GUNN, M.A., D.Sc.

412 pages. Cloth, price 3s. 6d.

That there is need for a book dealing with the special problems of the Infant School the writer is strongly convinced. There are two reasons which seem to require that an attempt should be made to deal with these problems at present. In the first place, the Infant School is dealt with in too summary a fashion in most books on School Method, and the importance of its work is by no means adequately represented. In the second place, the general plan on which most School Management Text-Books are based, that of the Curriculum or subjects of study, is not a plan suited to a discussion of Infant-School Management.—*Extract from Preface.*

The work contains Fifteen Chapters, dealing with—The School—The Teacher—Child Study—The Prophets of the Infant School—The Pupil—Training: Physical, Intellectual, and Moral—Occupations—Reading—Writing—Arithmetic—Drawing—Clay Modelling and Singing.

Specimen Schemes of Work for Infants and Time Tables for Infants are also given in a full Appendix, and the book will be found to be invaluable to Teachers.

** Nelson's School Circular and Educational Catalogue post free on application.

THOMAS NELSON & SONS,

E. J. ARNOLD & SON, Ltd., Educational Publishers, Leeds.

GEORGE GILL & SONS, Ltd.,

PUBLISH THE FOLLOWING WORKS FOR THE COLLEGE OF PRECEPTORS' EXAMINATIONS, 1905.

	s.	d.
FIRST BOOK OF KINGS. By the Rev. F. MARSHALL, M.A. Full Account of Solomon's Reign, the Schism, the Two Kingdoms. Special Maps, Diagrams of the Temple	1	6
SECOND BOOK OF KINGS. By the Rev. F. MARSHALL, M.A.	1	6
GOSPEL OF ST. MARK. By the Rev. F. MARSHALL, M.A. Maps of Palestine, Sea of Galilee, Galilee, Jerusalem, Environs of Jerusalem, Temple. Special Introduction	1	6
ACTS OF THE APOSTLES. Part I. Chapters I.-XVI. By the Rev. F. MARSHALL, M.A. Specially prepared for Students taking the first part of the book. Complete for the purpose, with Geographical and Biographical Notes, Maps, and Introduction	1	6
ACTS OF THE APOSTLES. Part II. Chapters XIII.-XXVIII. By the Rev. F. MARSHALL, M.A. Specially prepared for Students taking the Life of St. Paul. Separate Maps of each Missionary Journey, Voyage to Rome. Geographical and Biographical Notes... ..	1	6
ACTS OF THE APOSTLES. Complete. By the Rev. F. MARSHALL, M.A. Complete with Maps, Full Introduction, and Geographical and Historical Notes. A most comprehensive Manual	2	6
JULIUS CÆSAR. By STANLEY WOOD, M.A., and A. SYMS-WOOD, B.A. Fully Illustrated by Maps and Zinc Engravings. 256 pp. Crown 8vo, cloth gilt	1	6
TWELFTH NIGHT. By STANLEY WOOD, M.A. Introduction, Notes, Examination Papers, Versification, Glossary. Crown 8vo, 256 pp.... ..	1	6
LAY OF LAST MINSTREL. By the Rev. F. MARSHALL, M.A. Introduction, Notes, Papers. Illustrated. Crown 8vo, 236 pp.	2	0
THE OXFORD AND CAMBRIDGE GEOGRAPHY. Revised. New Maps.	1	0
THE OXFORD AND CAMBRIDGE HISTORY. 28 Coloured Maps, B.C. 55-A.D. 1904	1	0
THE OXFORD AND CAMBRIDGE ENGLISH GRAMMAR. Rewritten and Enlarged	1	0
THE OXFORD AND CAMBRIDGE PRACTICAL ARITHMETIC. New Edition	1	0
THE STUDENT'S COMPLETE EUCLID. By the Rev. F. MARSHALL, M.A. With Appendix. 296 pp. Crown 8vo, cloth	2	6
THE SCHOOL AND COLLEGE EUCLID. Books I.-IV. With numerous Riders, Deductions, Notes, &c. Crown 8vo, cloth	1	0
GRAPHICAL ALGEBRA. By R. H. ALLPRESS, M.A. 32 pp. Crown 8vo	0	6

PREPARATION PAPERS ON ST. MARK. In packet form, loose: 24 Junior Papers, 24 Senior. Each Paper different, covering the whole of the Gospel	0	8
PREPARATION PAPERS ON THE ACTS OF THE APOSTLES. In packet form, loose: 36 Junior Papers, 36 Senior. Each Paper different, covering the whole of the Acts	0	8
PREPARATION PAPERS ON ENGLISH GRAMMAR. In packet form, loose: 20 Preliminary Papers, 20 Junior, and 20 Senior. Each Paper different, and covering the whole of the Grammar	0	8
PREPARATION PAPERS ON FRENCH GRAMMAR AND TRANSLATION. In packet form, loose: 20 Preliminary Papers, 20 Junior, and 20 Senior. Each Paper different, covering the whole of the Grammar required	0	8
PREPARATION PAPERS ON LATIN GRAMMAR AND TRANSLATION. In packet form, loose: 20 Preliminary and Young Junior Papers, 20 Junior and Honours, 20 Junior and Senior, 10 Virgil. Each Paper different, covering the whole of the Grammar required in the Examination	0	8

WALL MAPS.

GILL'S "CARTOGRAPHIC" SCHOOL WALL MAPS.

EDITED BY GEORGE GILL, F.R.G.S.

Size 80 by 60 inches.

Not Overcrowded, not Undersized, but Bold and Clear.

16s. Mounted on Stout Linen Rollers and Varnished. 16s.

Compiled from the latest statistics, artistically coloured, and thoroughly reliable.

RECENT SCHOOL ARITHMETICS.

For use in Junior Classes. (With or without Answers.)
2s. 6d.

THE JUNIOR ARITHMETIC.

By R. H. CHOPE, B.A., of Kingswood School, Bath.

Published June 18th, 1904.

"Excellent."—*Educational Times.*

"A text-book possessing the qualities of soundness and reliability."—*Teachers' Aid.*

A Complete School Course. (With or without Answers.)
3s. 6d.

THE SCHOOL ARITHMETIC.

By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath.

Published October 27th, 1903.

"The best arithmetic for schools on the market."—*Mathematical Gazette.*

"Of a very high order of merit."—*School World.*

The special features of Clive's "Shilling Arithmetic" which will commend it to a very large class of teachers are:

(i.) **All Rules, Definitions, &c.**, which it is desirable that the pupil should **commit to memory** are given in a **concise form**.

A few model explanations of important arithmetical processes which may be reproduced with profit by the pupil, form, with the above, the entire text of the Arithmetic.

(ii.) **A plain course** containing no matter too difficult for ordinary school work.

Bound in Cloth. 1s. With Answers. 1s. 3d.

New—Useful—Economical.

CLIVE'S SHILLING ARITHMETIC.

EDITED BY

WM. BRIGGS, LL.D., M.A., F.C.S., F.R.A.S.,
PRINCIPAL OF UNIVERSITY CORRESPONDENCE COLLEGE.

Published December 15th, 1904.

(iii.) **A complete course** of Exercises and Problems both for oral and written work.

There are sets of Miscellaneous Exercises in addition to graduated sets given in the ordinary course.

(iv.) **The adoption of the features of the well-known copyright works by Messrs. Workman and Chope** in the same series in so far as they are suited to a simpler book.

A Complete School Course of Arithmetical Exercises and Problems, for oral and written work, together with Rules, Definitions, &c.

"Takes first place among our text-books in arithmetic."—*Schoolmaster.*

"Cannot fail to take a good place amongst the best text-books on the subject."
—*Educational Times.*

"An admirable book."
—*Westminster Review.*

An Exhaustive Treatise. (With or without Answers.)
4s. 6d.

"Destined to supersede all other secondary treatises."
—*Westminster Review.*

THE TUTORIAL ARITHMETIC.

A Treatise on Practical and Theoretical Arithmetic.

By
W. P. WORKMAN, M.A., B.Sc., and R. H. CHOPE, B.A.

Second Edition. Published August 28th, 1902.

"A stimulating and novel book."—*School World.*

"A distinct advance on most existing text-books."
—*Practical Teacher.*

"It is the most important work of its kind issued within recent years."
—*Educational News.*

Notes on German Schools.

With special relation to Curriculum and Methods of Teaching.

BY

WILLIAM H. WINCH, M.A.,

Late Scholar of St. John's College, Cambridge; Inspector of Schools; Author of "Problems in Education."

Mr. Winch has travelled over Germany, observing the educational system in a large number of schools, and he has given the results of his investigations in these Notes to serve as data for comparison between the German and the English systems.

His attention, as he says, was "mainly confined to the primary, middle, and that section of secondary schools in which modern languages and science take a prominent place." The principal points taken up are the school hours, training and salaries of teachers, curricula and methods of teaching, and the examination and promotion of the children. It is noted that the average school curriculum is much simpler than in England, that more time is devoted to the study of the mother tongue and literature, and that, except in the Hamburg boys' schools, foreign languages are not included in the primary-school curriculum. The individual teacher has no difficulty about the fair allotment of time to each subject, as that is settled for him in the official Syllabus of Instruction, which is perfectly rigid.

Mr. Winch points out further that in the direction of schools there is now in England, under the new Education Act, an interesting approximation to the German system. Directly-elected School Boards are unknown in Germany, the schools being under the charge of the municipalities. The second part of the book is devoted to outline lessons in the various subjects of the curriculum which Mr. Winch has heard taught.

"A careful study of these lessons, and, indeed, of the whole book, can be confidently recommended to all who are engaged in the duty of teaching, either in primary or in secondary schools, and only good could ensue were members of Education Committees and managers of schools to make a careful study of Mr. Winch's notes and conclusions."—EDUCATION.

"An admirable and useful piece of work. He gives answers to precisely the questions that are worth asking about the schools of another country. . . . His notes include specimen lessons in most of the ordinary modern school subjects, and show exceptional powers both of observation and of recording his impressions."—MANCHESTER GUARDIAN.

CASEY'S EUCLID.

THE ELEMENTS OF EUCLID,
 BOOKS I.—VI., AND PROPOSITIONS I.—XXI. OF BOOK XI.

Together with Appendix on the CYLINDER, SPHERE, CONE, &c., with Copious Annotations and Numerous Exercises.

By JOHN CASEY, LL.D., F.R.S., Fellow of the Royal University of Ireland, Vice-President, Royal Irish Academy, &c., &c.

Seventeenth Edition, price 4s. 6d., or in Two Parts, each Half-a-Crown.

A KEY TO THE EXERCISES
 IN THE SIX BOOKS OF CASEY'S "ELEMENTS OF EUCLID."

By JOSEPH B. CASEY, Tutor, University College, Dublin.

Fourth Edition. Small 8vo, price 6s.

A SEQUEL

TO THE FIRST SIX BOOKS OF THE "ELEMENTS OF EUCLID."
 PART I.

Sixth Edition, Revised and greatly Enlarged, price 3s. 6d., cloth.

A TREATISE ON THE

ANALYTICAL GEOMETRY
 OF THE POINT, LINE, CIRCLE, AND THE CONIC SECTIONS,
 Containing an account of its most recent Extensions, with numerous Examples.

Second Edition, Revised and Enlarged, 564 pp., price 12s.

A TREATISE ON

ELEMENTARY TRIGONOMETRY.

With numerous Examples and Questions for Examination.

Third Edition. Small 8vo, 148 pp., price 3s.

KEY TO THE EXERCISES

Educational Times.—"The Syndics of the Cambridge University Press are to be warmly congratulated on the conspicuously successful accomplishment of their project of presenting in a single volume such information as is likely to be most useful to the student of Greek literature, apart from the ordinary matters available in histories and grammars."

A Short History of the Greeks from the Earliest Times to B.C. 146. By E. S. SHUCKBURGH, Litt.D., late Fellow of Emmanuel College, Cambridge; Author of "A Translation of Polybius," &c. With Illustrations and Maps. Crown 8vo, 4s. 6d.

Times.—"Clear, scholarly, and readable."

School World.—"Mr. Shuckburgh's work is sound, scholarly, and interesting."

Academy.—"Mr. Shuckburgh's work is worthy of his reputation."

Saturday Review.—"An excellent school history, equally suitable for teacher and learner."

Graduated Passages from Greek and Latin Authors for First-Sight Translation. Selected and supplied with short Notes for Beginners by H. BENDALL, M.A., and C. E. LAURENCE, B.A., Assistant Master of Blackheath Proprietary School. Crown 8vo.

PART I. Easy. 1s. 6d.

PART II. Moderately Easy. 2s.

PART III. Moderately Difficult. 2s.

PART IV. Difficult. 2s.

A Short History of the Hebrews to the Roman Period. By R. L. OTTLEY, M.A., Canon of Christ Church and Regius Professor of Pastoral Theology in the University of Oxford. Crown 8vo, with 7 Maps, 5s.

Journal of Education.—"It marks an immense advance in the popular treatment of the Bible history; and teachers and students alike will find it a most valuable aid."

NOW READY.

A NEW TRIGONOMETRY BY PROFESSOR LONEY.

Intended for the use of Students commencing Trigonometry.

THE ELEMENTS OF TRIGONOMETRY. By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College (University of London), sometime Fellow of Sidney Sussex College, Cambridge.

Extra foolscap 8vo, 3s. 6d.

BY THE SAME AUTHOR.

PLANE TRIGONOMETRY. Sixth Edition. Crown 8vo, 7s. 6d.; or in Separate Parts. PART I. An Elementary Course, excluding the use of Imaginary Quantities, 5s. PART II. Analytical Trigonometry, 3s. 6d. Solutions to the Examples, 10s. 6d.

MECHANICS AND HYDROSTATICS FOR BEGINNERS. Eighth Edition. 4s. 6d.

ELEMENTS OF STATICS AND DYNAMICS. Ninth Edition. 7s. 6d. Or in Two Parts:—Elements of Statics, 4s. 6d. Elements of Dynamics, 3s. 6d.

Solutions of the Examples. Third Edition. 7s. 6d.

THE ELEMENTS OF HYDROSTATICS. Second Edition. 4s. 6d.

Solutions of the Examples. 5s.

A TREATISE ON ELEMENTARY DYNAMICS. Crown 8vo. Sixth Edition. 7s. 6d.

Solutions of the Examples. 7s. 6d.

The Prayer-Book Explained. By the Rev. PERCIVAL JACKSON, M.A., Jesus College, Cambridge.

PART I. The Daily Offices and the Litany. 2s. 6d. [Now ready.]

PART II. The Holy Communion and the Occasional Offices.

[In preparation.]

Church Times.—"We do not know of a more thoughtful and learned aid to the intelligent use of each detail in Matins and Evensong and in the Litany."

The Church Catechism Explained. By the Rev. A. W. ROBINSON, B.D., Warden of the Mission College of Allhallows Barking, E.C., and Examining Chaplain to the Bishop of Wakefield. Fifth Impression. Fcap. 8vo, 2s.

Record.—"A really useful manual."

Church Times.—"An admirable work, both as to the matter and its arrangement."

A Primer of French Verse for Upper Forms. Edited by FREDERIC SPENCER, M.A. 3s.

School World.—"Teachers owe a debt of gratitude to Prof. Spencer for this attractive volume. . . . It is a very good book."

Random Exercises in French Grammar. Homonyms and Synonyms for Advanced Students. By L. BOQUEL, Lecturer at Emmanuel and Newnham Colleges. New Edition. Crown 8vo, 3s. 6d.

Key to the above. Crown 8vo, 10s. 6d. net.

Exercises in French Composition. For Advanced Students. By the same Author. New Edition. Demy 8vo, 3s. 6d.

A Catalogue of New and Standard Books for Schools and Colleges will be sent on application.

The Educational Times.

Greek once more.

THE Greek Question, as it is called, is for the moment the one absorbing topic of thought and conversation with secondary teachers, and in the course of the next few days the vote of the Cambridge Senate will influence the studies not only of the older universities, but also of the higher schools, of England for at least another decade. We have no wish to exaggerate the importance of the vote, and the declaration of a learned professor that this is "the most momentous crisis that has ever defined itself in the history of advanced education" may be dismissed as a coruscation of rhetoric. Greek flourished at Cambridge before 1822, the year when it was first made a compulsory study: and Cambridge, even though it should refuse to move with the times, will continue to flourish, in spite of Greek.

It is not our intention to take part in the fray or add one to the innumerable fly-leaves that have rained on electors during the past month. All have by this time made up their minds, and it is doubtful whether any arguments, however cogent, would now influence a single vote. Our excuse for recurring to the subject is that it has far more than a passing interest, and touches the first principles of pedagogics.

By a happy accident we are able to see how the question struck a contemporary—one of the acutest and most philosophic minds of our generation, well qualified both by experience and study to form a judgment, and writing at a time before Greek had become a shibboleth of academic politics.

Henry Sidgwick's essay on "The Theory of Classical Education," written in 1867 for a volume edited by Dean Farrar, which had long been out of print, has been recently reprinted among his remains, and as we reperuse it we are struck by the grasp he shows of the problem in all its aspects—how he has anticipated nearly all the arguments put forward in the full-dress Senate House debate; how all the changes and developments in our secondary schools that have since occurred serve only to enforce his position.

The essay must be read to be appreciated, and a *précis* would give but a faint indication even of the chain of argument and its logical conclusiveness. We must confine

ourselves to drawing attention to one of two aspects of the question that were passed over or only glanced at in our previous article.

Perhaps the most question-begging epithet in the whole discussion is "utilitarian," as the adjective is used by the classicists. To brand any study—of modern languages, for instance—as "utilitarian" is, for them, tantamount to reducing it to the lowest educational value; it is intended to convey the same stigma as the German phrase: "a bread-and-butter science." But, as Sidgwick points out, the true distinction is not between utilitarian and liberal studies, but between a natural and an artificial education. By a natural education he means one that teaches a boy subjects that will interest his future life: not merely help to gain him a living. An artificial education is one which, in order that man may ultimately know one thing, teaches him another; which gives the boy the rudiments of some learning or accomplishment that the mature man will be content to forget. It is not disputed that for all save a limited class—clergymen and *littérateurs*—classics are part of an artificial education. If so, the *onus probandi* lies with the classicists. They must demonstrate that the process of learning Latin and Greek is a better mental gymnastic than any subject that could be substituted, and gives a training that cannot be equally given by English or French or science or any "natural" subject. We cannot now pursue the inquiry, but must refer our readers to the essay for the masterly analysis of the unique virtues and no less glaring defects of a purely classical training.

There is, moreover, an ambiguity in the advocacy of "classical studies" which has never been so well exposed as in the essay. "There seems no adequate reason why Latin and Greek should be regarded as a sort of linguistic Siamese twins, which Nature has joined together and which would wither if separated." Let us grant all the virtues that the classicists claim for the study of *one* dead language; it does not follow that these virtues will be doubled by studying two. The half, in this case, may prove to be greater than the whole—ininitely greater if the artificial half that is subtracted is replaced by some natural study.

Another fallacy that needs no less exposing underlies the belief that, because a complete study of Latin and Greek is felt by some who have successfully pursued it (not by all or

by Mr. Sidgwick himself) to have been the best possible literary training, therefore half as much Latin and Greek ought to produce about half as much the same result. We might as well contend that the Londoner who reaches Dover will have seen half as much of France as his companion who crosses the Channel. "It is a point of capital importance that instruction in any language should be carried to the point at which it really throws open a literature, while it is not a point of capital importance that any particular literature should be so thrown open." With the greater number of boys who are put through the mill of Latin and Greek, "the mind, exhausted with the labours of language, imbibes miserably little of the lessons of literature."

One other point, in conclusion, we may illustrate by a quotation which will serve as a specimen of the essayist's vigorous style. Both sides in the controversy, Greeks and Trojans alike, have complained of the multiplicity of subjects now taught in schools, and, though they differ as to the remedy, either side would welcome a lightening of the over-burdened curriculum. The evil is real and pressing; but it must not be interpreted as meaning that there is any incompatibility between literature and science. If a choice has to be made, we must, undoubtedly, choose "that study which best fits us for communion with our fellow-men"; but, at least in the earlier stages of education, there is no need for any such alternative.

"I absolutely deny this incompatibility; nor do I think it would ever have occurred to any one except for the strange illusion that in the age in which we live classics must necessarily be the 'substratum,' 'basis,' 'backbone' (or whatever analogous metaphor is used) of a literary education, and that therefore we must leave on one side every other form of literature with a view of imparting as much classics as possible. The consequence is that half the undergraduates at our universities, and a larger proportion of the boys at all (except, perhaps, one or two) of our public schools, if they have received a literary education at all, have got it for themselves; the fragments of Latin and Greek that they have struggled through have not given it them. If so many of our most expensively educated youths regard athletic sports as the one conceivable mode of enjoying leisure, if so many professional persons confine their extra-professional reading to the newspapers and novels, if the middle-class Englishman (as he is continually told) is narrow, unrefined, conventional, ignorant of what is really good and really evil in human life, it is not because these persons have had a literary education which their 'invincible brutality' has rendered inefficacious: it is because the education has not been (to them) literary; their minds have been simply put through various unmeaning linguistic exercises."

This was written more than a quarter of a century ago, when in the same volume Archdeacon Wilson was pleading for the introduction of natural science and Prof. Hales for the study of English literature as a school subject. Both subjects have since been admitted by our classical head masters, but grudgingly and of necessity; but classics is still the predominant partner. Is not Sidgwick's indictment of our schools and universities still in the main true? Let Mr. Arthur Benson answer for the public-school boy and Dr. Montagu Butler for the undergraduate.

NOTES.

ONE of the most important of the pamphlets on the Greek question is certainly "Greek and its Humanistic Alternatives in the 'Little-Go,'" by Dr. Karl Breul (1s. net. Heffer; Simpkin, Marshall, & Co.). Dr. Breul reprints in fuller form his speech in the Senate House (December 2), adds very instructive notes amplifying or illustrating particular points, and supplements all this by a series of critical notes on the Discussion of the First Report of the Studies and Examinations Syndicate as published in the *Cambridge University Reporter* (December 17). The pamphlet is well worth the attention of both sides. It is well informed, keenly argued, and moderate in tone.

WE cordially welcome the republication of the First Part of Dr. Allchin's "Account of the Reconstruction of the University of London" from the pages of the *Medical Magazine* (2s. 6d. net, Lewis). The period from the foundation of the University down to the first efforts of reconstruction is briefly outlined; but the work of reconstruction down to 1888 is very fully detailed, with quotations from speeches and documents and an appendix of charters and other pertinent materials of illustration. A second part, we dare say, will bring the record up to date. The work will be extremely convenient for reference. It is a melancholy story. The obstacles to development in London do, no doubt, prevent any close comparison with the rapid transformations in Liverpool, Manchester, and Birmingham; and probably enough the newer universities profited by the earlier struggles of London and by the general rise of interest in the higher education. At the same time, it cannot but seem amazing that such a prolonged and confused conflict should have been necessary for the establishment of an institution that could reasonably be called a University in the very Metropolis of the British Empire in the last quarter of the nineteenth century. Even as it stands, the University lacks the means for anything like an adequate fulfilment of its purposes. Why, it does not yet appear to have even attempted to constitute a Faculty of Law. It is for the Government to show an example, and to communicate an impulse, to private beneficence.

THE results garnered by the Mosely Commission to the United States have been well connoed and duly appreciated in this country, and there is no intelligent dissent from the contention that the new universities should provide liberally for "a sound and thoroughly scientific education in commercial affairs." Nor, indeed, is there any good reason why such provision should not be made in all the universities, older as well as newer. We do not suppose that Mr. Mosely, in his speeches at Leeds, meant either to restrict scientific commercial education to the newer universities or to exclude from these institutions other forms of higher study; we imagine he simply insisted, with the emphasis necessary to produce and to extend conviction, upon the side of education that is uppermost in his mind as a man of business. It was well, however, for the Mayor of Bradford—

also a man of business—to put forward an explicit claim for “the highest forms of learning.” He pointed out that towns like Bradford could themselves train their students for their own purely technical work, and that they looked to the university for “more than they could obtain locally.” Even if they obtained a higher stage of technical training in the university, that would be quite insufficient for the battle of life, which is a very much wider affair. “This country,” he wisely contended, “can hope to fulfil its destiny only by giving heed to the highest forms of learning.” The only security is to see that the sources are full and constant. Such enlightened words from a business man at the head of a great commercial town are very encouraging indeed; and we are glad to note that they were received with marked applause by his audience and emphatically endorsed by the local organs of the press.

THE same sense of the necessity of a wide academic scope was significantly manifested in the proceedings at the fifth yearly meeting of the Court of Governors of the University of Birmingham the day before (February 5). The Principal, Sir Oliver Lodge, expressly stated that “it was desirable to stem the idea that the University of Birmingham had nothing to do but with hardware and matters of technical education”: though it had a great deal to do with technical education, it was “not limited to ‘bread’ subjects.” Indeed, he actually “must say a word for a Chair of Greek; he felt that the University was not complete on the Arts side without one.” His idea is not to teach the Greek language in the hope that the students may one day want to read Greek literature, but to provide opportunities for students that want to learn the Greek language in consequence of having been impressed with the beauties of Greek literature. Well, anyhow, he, the eminent man of science, wants a Chair of Greek. Moreover, Mr. Chamberlain, man of business and holder of various learned degrees, “heartily agreed with the Principal’s suggestion.” “Whether compulsory or not,” he said, “Greek could not be excluded from the idea of a complete and liberal education.” So the hardware reproach will soon be taken away by the establishment of a Greek Chair; for they do not talk half a generation about doing things in Birmingham. Like the *Birmingham Post*, we find this scientific and business excursion for the humanities “quite refreshing.”

WHILE Sir Henry Craik blessed altogether the new Minute of the Scotch Education Department at Dundee, and laid special stress on the preservation of the religious teaching of the past, the *Dundee Advertiser* laments that “the perfection of the scheme is seriously marred” by the retention of the religious element, and “a great opportunity lost.” Our contemporary affirms that, “in point of fact, there has never been anything properly to be called denominational teaching in the training colleges,” and that, if anybody shall say that the colleges, when managed by Committees under the State, propagate the views of special ecclesiastical bodies, “it will be an unfair charge.” But the institutions should have been placed beyond suspicion. “With the development of the national ideal, it has been felt in growing measure to be an anomaly that teachers in

the national schools should be obliged to pass through the portals of denominational institutions; and the chance might very well have been taken of sweeping away that anomaly now, giving us instead a system of education free of the taint of sectarianism from top to bottom.” This is, no doubt, the more advanced view, but the popular feeling is very largely in favour of religious teaching, and will scarcely be excited by random allegations of undue ecclesiastical bias that will neither exist nor be believed to exist.

SPEAKING at West Hartlepool Technical College, Sir Christopher Furness dealt wisely, and, we should hope, persuasively, with the importance of technical education to the rising generation of our industrial workers. The first thing for a boy is to secure “a good mother,” and there are agencies at work to improve the prospects of the future. The next thing is “steady, plodding perseverance.” There is really nothing new here, but the conditions of the time give fresh point to the ancient doctrine. The boy’s perseverance is to be directed to the acquisition of technical knowledge during his spare time, in defiance of the multiplicity of social distractions. Then the world is his oyster, which he may open by means of his acquirements. If it is a just saying, it is yet a hard saying, especially to the very poor, and boys of any moral grit short of the highest need to be very judiciously encouraged in the first stages of a long road towards prospects that may very well seem doubtful as well as dim. Yet the activity and hopefulness of youth will do wonders under wise guidance. We should hope that the attractive conduct of the evening technical classes will furnish a sufficient inducement, without any necessity of compulsory measures. There is no stronger form of attraction than making a youth feel that he is seeing into his subject and getting a tangible grasp of an instrument that he can use to practical purpose.

ON presenting the annual report of the Assistant Masters’ Association for 1904, Mr. G. F. Daniell, the retiring Chairman, said (*inter alia*):

The Regulations for Secondary-School Buildings and for the Training of Pupil-Teachers fill me with an admiration which is only qualified by a haunting fear, which I hope will be speedily removed. My fear is that, when the available rates and other sources of income have been drawn upon, and by great judgment and economy the Board’s requirements (excellent, most of them) have been satisfied, you will have the buildings and the pupils, but no money to remunerate properly a good teaching staff. There is no sign that the Board have considered this aspect of the question—in fact, the importance of having a properly remunerated staff of well qualified teachers is utterly neglected in the latest edition of the Regulations. Verily, there is work for this Association to do.

We should hope that Mr. Daniell’s fear is groundless. The Board can scarcely be supposed to have taken leave of their senses. Only buildings have before now affected the proper remuneration of a good teaching staff, and he did well to place the danger pointedly before the Association. The report, which exhibits a year of strenuous activity, contains some important tables of “conditions of service,” including the matter of salary, which is plainly inadequate for “a good teaching staff.” It must ever remain true, up to a maximum that is not yet in sight, that, as Mr. Holland said, “the quality of the teacher is decided by the salary paid him.”

MANY of our readers will no doubt be interested in an inquiry instituted by the editors of *L'Enseignement Mathématique* with a view to promoting the improvement of mathematical study and teaching. The editors write:

Le but de cette enquête est de consulter les mathématiciens sur des questions relatives à leur méthode de travail et de dégager de l'ensemble des réponses un certain nombre de renseignements et de conseils qui seront profitables non seulement aux jeunes mathématiciens, mais à l'enseignement mathématique d'une manière générale. Certains résultats apporteront en outre une contribution à la psychologie des professions. . . . Il est certain que la manière dont l'ensemble des mathématiciens travaille a le plus grand intérêt. Et même de l'inévitable diversité des réponses doit sortir un très utile enseignement.

Such mathematicians as are willing to assist the research are invited to give information as to their experience and their methods of work; and, in order that the help thus obtained for the cause may be as efficient as possible, the promoters of the inquiry have prepared for circulation a series of questions bearing directly on the subject of investigation, and they will be glad to forward the schedule to any one applying to them for a copy. Address: M. C.-A. Laisant, 162 avenue Victor Hugo, Paris.

SUMMARY OF THE MONTH.

THE Greek question comes up again at Cambridge on March 3 and 4, and both sides are conducting a vigorous campaign. In an amended report the Syndicate appointed "to consider what changes, if any, are desirable in the studies, teaching, and examinations of the University" propose to include in the examination in the classical languages a paper containing as alternatives (1) passages for translation from a selected book or books, and (2) unprepared passages for translation, a vocabulary of unusual words being supplied. Having regard to the discussion of their first report in the Senate, they further propose that there should be no separate paper or part of a paper in grammar, but that, besides the exercise in grammar provided by the passages for translation into Latin and by the short sentences for translation into Greek, questions should be set on accidence and syntax in connexion with the translation papers. In Part III. they add to their recommendations (1) a paper on one of the Synoptic Gospels in Greek as alternative to the paper on one of the Synoptic Gospels together with the Acts of the Apostles in English, and (2) a paper on Elementary Logic to be included among the optional subjects.

THE Board of Education have issued a circular to Local Education Authorities pointing out that the establishment of new Local Authorities for Education throughout the country affords a fitting opportunity for once more calling attention to the importance of the encouragement of thrift amongst the children of elementary schools, and to the practical assistance given to this aim by the establishment of penny banks.

A MINUTE of the Committee of Council on Education in Scotland (January 30) provides for the establishment of committees for the training of teachers in connexion with the several Universities. Each Committee shall have power to provide, whether in University classes or otherwise, courses of instruction suitable for the training of teachers (including teachers for secondary schools), and embracing, if the Committee so determine, instruction in religious subjects. The Committee shall also have power to institute, with the consent of the Department, subsidiary courses of training at approved centres in connexion with either a secondary or a higher-grade school. The members of the Committees are drawn exclusively from bodies directly concerned with education, the idea of the representation of municipalities having disappeared. The scheme has been produced after conference with the Committees of the Scottish Churches.

THE nature of the provisions required by the Churches may be read in the following excerpts from the Minute:—

XI. When a training college so transferred is the property of or is held in trust by the representatives of any Church or religious denomina-

tion, it shall be a condition of such transference that provision shall be made therein for religious instruction in accordance with the views of the said Church or denomination to an extent not less than that which is at present customary in the college so transferred, which instruction may either be provided by the accepting Committee or the transferring Church or denomination as may be agreed between them, and further, where the accepting Committee undertake to provide such instruction on their own behalf, it shall be a condition that they also undertake to afford adequate facilities for the periodical inspection of the said instruction by duly accredited representatives of the transferring Church or denomination under conditions to be determined by the Department.

XII. Where a training college is transferred as set forth in the preceding section, the accepting Committee shall co-opt, as fully privileged members, representatives of the said Church or denomination.

DISCUSSING the Minute at a meeting of Dundee teachers (February 4), Sir Henry Craik said:

The overtures made to the representatives of the Churches who had hitherto been responsible for the training colleges had been met in the broadest spirit with the greatest desire for conciliation and with an admirable resolution to put the public interest beyond all others. The Minute had been drawn up in such a way as to recognize fully the debt they owed to the Churches for their work in the past, and not only that, but to give them full securities for that religious education in future which the country (he believed) desired, and which the perfect freedom of their Scottish system of education looked upon as one of its central points. Secondly, it brought into sympathy with and into co-operation in this great work a vast number of different agencies who had hitherto been debarred from taking part in it. The new Committees, which were to play so large a part in that training, were to be representative of interests which were largely concerned in the training of teachers, but which had hitherto found themselves excluded from any part in that. They would now work in co-operation without overlapping of agency or waste of energy, and all parts of the great work of training the army of teachers on which so much of the prosperity of the country depended would be fitly dovetailed together. Lastly, it would link on the training of teachers to the work of the great universities by making their part in the universities greater than it had hitherto been. Teachers would hereafter form a profession not trained alone, but running side by side with the great intellectual interests of the country, recruited from the same sources as the other learned professions, widened in their sympathies and intellectual range, and, he believed, stimulated in their energies by the wider sympathy that would thus be gained. He believed in that Minute there were great possibilities. If the Department had ever been able to make a decided move forward, it had made such a move forward in this Minute, because its main object had hitherto been, and he was certain would be in the future, to understand the real aim and the trend of the educational movement in the country.

PROF. DARROCH lectured to the members of the Secondary Teachers' Association (Eastern Branch), Edinburgh (February 18), on "The Inner Reform of the Scottish Universities' System." Prof. Darroch remarked that the question of the reconstruction of the Arts curriculum had for some considerable time engaged the attention of the university authorities; but, owing to the want of unanimity amongst the various universities as to the necessity and urgency of many of the changes advocated, little progress had been made in the realization of the reforms.

Under the recently announced Minute of the Scottish Education Department for the Training of Teachers, the Scottish universities would probably be asked to take a larger share in the work of preparing the primary and secondary teachers of the country, and therefore the reconstruction of the Arts curriculum was a matter of pressing and urgent importance. He laid stress on the broadening of the Preliminary Examination and the bringing it into conformity with the new Grouped Leaving Certificate of the Scottish Education Department. At present the entrance examination to the university was constructed on too rigid lines, and in consequence the modern side of education was unduly handicapped in its contest with the classical side. If the universities were to take their proper place in the work of training the secondary-school teacher, they must organize courses of study to suit the varying needs of the various classes of teachers. Dealing with the defects of the present system, which, he said, allowed too much freedom of choice to individual students, both as to subjects taken and order of study, he advocated the adoption of a five-subject course, in which two of the subjects should be taken during two successive years and passed on a higher standard than the remaining subjects. A definite order of studies should be laid down. He went on to condemn the lecturing system, urging increase of teaching power so that the lecturing system might be supplemented by the tutorial. In particular, if the universities were to undertake successfully the work of training secondary-school teachers, provision would require to be made for the appointment of qualified lecturers to give instruction in the methods of teaching secondary-school subjects, and who would be able to co-operate with the head

masters of the city in the work of practical training. The extension of the teaching year would largely tend to the abolition of the present large classes. In conclusion, Prof. Darroch pointed out that the Universities of Scotland were at present unable to advance owing to the lack of individual freedom. The remedy for this was allow a large measure of autonomy to each university.

THE distribution of the prizes and certificates awarded after the twentieth annual competition in the French literature and language under the auspices of the National Society of Professors of French in England took place (February 4) at the Mansion House. The Lord Mayor presided, and he was accompanied by the French Ambassador, the Lady Mayoress, the Sheriffs, M. S. Barlet (President of the Society), M. A. Barrère (Hon. Secretary and President of the Competition Commission), the Rev. G. H. Rendall (Head Master of Charterhouse), M. Barbeau (Docteur-ès-Lettres, delegate of the University of Caen), M. B. Minssen, M. Pétilleau, and others. M. Cambou presented the Society to the Lord Mayor. M. Barlet said that in extending his protection to the competitions, in giving to the examinations that valuable publicity, the Lord Mayor not only lent prestige to the study of French in the United Kingdom, but he contributed much to the *entente cordiale* between two great nations who, in order that they might love one another, only needed to know one another. M. Albert Barrère said that the various competitions of the Society had become firmly established institutions, and their working continued to go on with the usual success. The monthly competitions, to the number of seven, had brought together in 1904 nearly 2,000 candidates. The Lord Mayor congratulated the prize-winners and the Society.

At the sixth anniversary meeting of the London Branch of the German Language Association, the founder of the Branch, Prof. Aloys Weiss, Ph.D., M.A., congratulated a large gathering of members on the continued success of the society, the roll showing 542 members—a considerable increase on the previous year. Their literary aims had been advanced by means of lectures, meetings, the circulation of books, and examinations in the German language and literature. Mr. Balfour, in acknowledging the second edition of the German version of his address to the British Association at Cambridge, had said: "I would that the disinterested community of aim which thus binds together the scientific men throughout the world into one international brotherhood could extend its healing influence through all classes and all interests." Dr. Weiss added: "May our endeavours to spread an appreciation of the beauties of German literature and to unite Englishmen and Germans in the study of the language of Goethe and Schiller likewise strengthen the bond of union between the sister countries England and Germany!" After the presidential address, Mr. Hermann Meyer gave a highly appreciated discourse on "Modern Literature and Modern Notions." A musical programme followed.

THE annual meeting of the Mathematical Association was held at King's College on January 28. Prof. G. B. Mathews, F.R.S., was elected President for the ensuing year. Papers were read on "Models and their Uses," by Mr. E. M. Langley, and on "The New Geometry," by Mr. W. H. Wagstaff, who does not think it is desirable to make all boys learn deductive geometry, but that some should learn logic instead, and that some training in practical geometry should be given to all. A discussion on the question: "Should Greek be Compulsory for Mathematicians at Cambridge?" was opened by Mr. A. W. Siddons, who urged that mathematicians should not have special arrangements made for them; that, if Greek was compulsory for others, it should be for mathematicians also. Prof. A. R. Forsyth, F.R.S., said it is to his mind extraordinary that teachers of classics argue that, if Greek be made optional, therefore the subject will become extinct. The subject has a strong hold on the public schools and the universities; every outside inducement to its continuation is still maintained, but in a large number of schools in the country Greek is now extinct. If the ancient universities maintain this barrier of Greek as a preliminary qualification for a degree, it means one of two things—either that all the boys in those schools where Greek is now extinct are cut off from the universities, and so those institutions cease to be contributing to the educational wealth of the country to the same extent as they used to do, or else that many boys often proceed to get up the subject from the point of view of satisfying a miserable minimum. What is asked for is a relaxation in favour of

education in general, and not in favour of any special class of people. The elimination of literary training in the country is not being sought.

MR. E. A. BAUGHAN addressed a large meeting of the Incorporated Society of Musicians at Hanover Square (February 11) on "The Profession and the Art of Music," Dr. Cummings in the chair. In illustrating some of the drawbacks in the life of the music teacher, Mr. Baughan said the teacher had no incentive to keep himself abreast of modern thought in music. His complaint against London teachers was that, with all the opportunities they had for hearing the finest music performed in the most perfect way, they allowed themselves to be atrophied by the daily grind of their profession. They did not regard the hearing of music as part of their education. In his opinion the education of a violin teacher was not complete unless he was familiar not only with the works of Joachim a couple of decades ago, but also with the playing of modern artists like Kreisler and Ysaye. The same principle applied to the theorist and the singing teacher. "You have your examinations, your diplomas and degrees," said Mr. Baughan, "but you have no proof of a teacher's competence." There was no examination to show that the teacher was specially fitted for the work. Dr. Cummings, agreeing in the main with Mr. Baughan, spoke of the destructive influence of inferior teaching on the voice of the pupil.

THE Council of the Association of Technical Institutions has published its report of an inquiry, undertaken in May, 1904, as to the conditions of admission to evening classes in technical institutions and evening continuation schools throughout the country. The conclusions are:—(1) That it is undesirable to establish any general system of free admission to evening continuation schools, or of free admission or admission at specially reduced fees to evening classes in technical institutions; (2) that it is unnecessary to grant entirely free admission to evening classes in technical institutions to any special class or body of students or workers engaged in skilled industries, such as apprentices or persons under twenty-one years of age; (3) that there is need for the establishment in all technical institutions of sufficient "free studentships" or "scholarships" to secure the admission of all qualified and deserving students who are unable, by reason of their limited means, to pay the usual class fees without more sacrifice than should reasonably be expected of them. The conclusions are based upon information specially received with reference to sixty evening continuation school areas and from eighty-three technical institutions. Of the technical institutions, fifty-five are not in favour of free admission, and one only in favour of it. The remaining institutions gave no definite answer. Thirty-eight Education Committees are against free admission to evening continuation schools, two are in favour of it, sixteen expressed no opinion, and four suggest scholarships.

At the twelfth Annual Conference of the Associations of Technical Institutions at Manchester (January 27), Sir John Gorst, K.C., M.P., in the chair, Sir Philip Magnus, who was elected President for the ensuing year, discussed the character and scope of the education and preliminary training needed to enable students to take full advantage of the teaching at such institutions as were represented at the Conference. He advocated that elementary education should be made more practical than it was at present, and he believed that in the near future their work-room would gradually supersede the class-room in the elementary school, and that manual training would become the central feature of the teaching, around which other studies would be grouped. The training of the hand and brain by suitable lessons or practical work was recognized by the Board of Education, who had shown they were alive to the necessity of introducing some such changes as had been suggested in the methods of elementary education. Sir Philip sounded a note of warning as to the potential dangers inherent in the scholarship schemes which municipalities and other authorities were now elaborating, and which might possibly impede intellectual growth and development of the more backward children—those who might not so quickly rise to the surface. What, he could not help thinking, must happen if Oxford and Cambridge insisted on requiring from all candidates for admission a knowledge of both Greek and Latin was that students of engineering and other branches of applied science would flock to London, and to the newer local universities, and that Oxford and Cambridge would in the future, as they were mainly in the past, be the great

schools for humanistic studies. Principal Reynolds (Manchester), Mr. Wilkinson (Bolton), and Principal Crowther (Halifax) read papers on the co-ordination of the work of evening continuation schools and municipal technical institutions.

SPEAKING as Chancellor at the annual meeting of the Court of Governors of Birmingham University (February 6), Mr. Chamberlain said:

As to finance, it is the business of a treasurer to be pessimistic, and it is, I think, the business of a Chancellor to be optimistic, and I am not alarmed by any anticipations of possible deficits in the future. It is something to find that the Government are becoming alive to our needs and to our deserts, and that they have been able to double the sum previously given for the university education, but we may bear in mind at the same time that the present Chancellor of the Exchequer has promised to double it again in his next Budget, and, therefore, I anticipate that from that source we shall receive a very considerable addition. I do not at all accept it as in any way a satisfaction of our demands, because it is my conviction that public opinion will soon insist upon larger sums being devoted to this purpose. When I think that we are spending thirteen millions a year at least on primary education, I say the sum now given for the purpose of the highest education, the most profitable of all the investments we can make in that direction, is altogether inadequate.

In a lecture delivered to a meeting of teachers at Birmingham University, on February 10, Sir Oliver Lodge is reported to have said hard things about arithmetical sums "dealing with artificial complexities of pretended commerce expressed in units of barbaric origin." And, as to the teaching of history:

What were we to say about the teaching of history in schools—the history of the world, of mankind in general, of one's own nation and city in particular? Usually the term "history" was applied, in schools, in the sense of the history of our own nation, beginning at some well marked epoch and finishing a century or two away, so that events might not become too complicated or too personal. Much of what was so taught was rather the dry bones of history; it was anatomy rather than physiology—a scrutiny of the structure of defunct organism rather than a study of living function. Part of that anatomical study was necessary and might be acquired young. The order of the kings, for instance, with their dates, was a harmless and useful piece of memory work: it served afterwards as a sort of framework in which to set more vital details. But, for any real insight into the history and institutions of a people in their struggles and revolts, their failures and successes, their emancipations and their oppressions, for any real sympathy with the feelings and efforts of a statesman, something beyond infantile age was necessary.

At the Conference held at the Sanitary Institute on "School Hygiene" (February 9) Sir Aston Webb, R.A., dealt with the subject of "The Building and Equipment of Schools." There should be at least three parties consulted (he said) before any school could be built—doctors for the sake of health, schoolmasters for the sake of scholastic needs, and the architect for the building. The most important matter of all was that of hygiene, for a mistake in this could never be rectified. The school should be cheerful within and without. A series of connected blocks he thought the best form of school.

An Irish correspondent of the *Spectator* sends an interesting extract from a letter written by Edmund Burke in July, 1746, about a month after he had obtained a scholarship at Trinity College, Dublin. It is addressed to his schoolfellow and lifelong friend Richard Shackleton, son of his teacher at Ballitore, co. Kildare. Burke wrote:

Your office of a schoolmaster throws you amongst the ancient authors, who are generally reputed the best; but as they are commonly read and taught, the only use that seems to be made of 'em, is barely to learn the language they are written in—a very strange application of the use of that kind of learning—to read of things to understand words, instead of teaching words that we may better be enabled to profit by the excellent things which are wrapt up in them. I would therefore advise you to be less inquisitive about the grammatical parts of the authors than you have been, not only for the above-mentioned reason, but because you will find it much the easier way of attaining the language. And you will be pleased to consider after what manner we learn our mother tongue. We first by conversation (to which reading, when the language is dead, is equivalent) come to know the signification of all words, and the manner of placing 'em. Afterwards we may, if we will, know the rules and laws by which they are to be placed so and so: which will then be quite easy to us, as they are only the laws of words reduced to writing.

UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

Oxford. As we write, the wind howls from the north-east, and the Torpids are rowing and the spectators are inhaling influenza, and every one seems uncomfortable. We can only snatch a fearful joy by watching (as has happened more than once during the week) the sinking or partial sinking of a crew, thanks to the want of skill or the impetuosity of the cox. in the boat behind.

The east wind seems to have numbed our faculties, and we are unable to get up any excitement over University affairs. There has, indeed, been an election to the Boards of Faculties, and, in one or two cases, there were more candidates than vacancies: as usual, this happened in the Arts Faculty. The voting was fairly close, and it is not very easy to judge by what issues it was guided. Mr. Cookson, of Magdalen, who is in the anti-Greek camp, was defeated; but, on the other hand, the President of Magdalen—who is nothing nowadays but a Progressive—was fairly high on the list.

Dr. Grundy, of Corpus, who grinds many axes, seemed to commend himself least of all to the electors. As regards the election at all, it seems a pity that, if the candidates cannot be arranged by friendly compromise between different parties and colleges, those capable of voting should not turn up in larger numbers, as a whip among the voters in two or three colleges can, under present circumstances, decide the result.

Prof. Firth's Inaugural Lecture seems to have moved the waters and a good deal of discussion has been started as regards the real aims and objects of our History School. There is no doubt that—as Mr. George Trevelyan said in the *Independent Review*—the danger nowadays is that men will "from sheer want of time fall back on mere text-books." But we should like to point out that it seems the end and object of many of our history teachers up here to devote their leisure time to turning out such text-books, or even a complete series of them: and they might possibly argue that the text-book is more "up-to-date" than what Mr. Trevelyan describes somewhat vaguely as "the best books."

Mr. Beit's offer of the Colonial History Professorship may be said to be now definitely accepted, and we confess that we cannot see any ground in the sneers levelled at the University for accepting. The gift is of generous dimensions, the application of it practically in the control of the University, and all the talk of "timeo Danaos" seems idle.

In the death of Mr. J. C. Wilson, of Exeter, Oxford has lost an interesting figure: in the Department of Jurisprudence he had held a prominent place as teacher, examiner, and then Chairman of the Board of Faculty in the subject.

He was besides a well known personage in the town as being one of the few University men who really took an interest in municipal matters, and he had filled many municipal posts.

Consequently "Town and Gown," both official and private, met in large numbers at his funeral.

The mention of the town and municipal matters leads one by an easy transition into a denunciation of the sins of the City Council: from time to time street widenings or repairs are necessary, and we have become accustomed to these being invariably carried out during term, but it is going beyond a joke when the alteration or something of the kind in the drainage system is allowed during term time to disorganize traffic in some of the main thoroughfares.

The Eights Week and Commemoration proposals are still agitating public opinion, and the promoters of the view that Eights Week should be postponed till the end of the term have issued a kind of scheme of the possible rearrangement of things. The *Oxford Magazine* is now apparently on the side of the reformers, and published in a recent number a comparative chart of the Cambridge and the Oxford Summer Term, or, at any rate, the last half of those terms. The main difficulty in the suggested rearrangement lies with the disposition of the examinations, and it appears as if, anyhow, the reformers, by putting these examinations earlier, will not add so much as they think to the working hours of the term.

A correspondent shrewdly points out that a great deal of the fault of the slackness of Summer Term lies with the "parks system," which year by year utilizes the fine weather for garden parties and picnics, and finds the undergraduate quite ready to be entertained.

The production of "The Clouds" promises to be a success; the mistakes of "The Knights" are not likely to be repeated now

that the production is to be supervised by distinguished classical and archæological authorities, and an expert from one of the ladies' colleges is superintending the costumes.

Such other news as remains is rather disconnected. Mr. Lionel Smith's appointment as Ford Lecturer has been a popular choice, as few of our history teachers have worked harder and longer. His son, the newly elected of All Souls, will, we suppose, carry on the historical lamp.

The scheme for the instruction of university candidates in military subjects has been eventually developed, after some trouble, and four courses of lectures are being given this term. Not unnatural indignation is felt at the practice which the War Office has adopted of apportioning appointments equally among the older and newer universities, considering the wide difference in the number of potential candidates.

The victory of the Association XI. over Cambridge came as a pleasant surprise to us, and confounded the prophets who are wise before the event.

The Torpids have been mainly noticeable for the success of University, who have not only gone head with their first boat, but made a series of bumps with their second. The first boat was fortunate in having the services of two Eight men who were prevented by illness from rowing in the Eight last summer, and were, therefore, qualified by the rules to appear in the Torpid.

The Golf Club is on the point of deserting Hinksey for the new course near Radley. Those who have little time to spare in the afternoon will probably stick to the monotony of the Cowley course; but without two courses we should be sadly handicapped, as the number of players—senior and undergraduate—is nowadays legion.

Rumour speaks of the 'Varsity Eight as of a respectable mediocrity.

(From our own Correspondent.)

THE Lent term is always gloomy, and this year Cambridge. we have had special reasons for depression.

Hardly had we returned to residence when all were shocked by the sudden death of the Provost of King's. Mr. Austen Leigh seemed to many of us the embodiment of a type of which the late Master of Magdalene was so notable an example—the Cambridge man to whom we could point as representing the learning of Cambridge and the culture of a cosmopolitan. Others have written of his special claim to distinction in the academical world, but it is only fitting that these notes should bear witness to the real power possessed by one whose high principle, unfailing courtesy, and strong judgment have left their impress on the University, while remaining comparatively unknown in the world without. We were proud of him in his life and we mourn him now that he is taken from us.

The death of Mr. C. J. Clay was also comparatively a surprise. A busy life of strenuous labour extending well beyond the allotted three score years and ten had left him unimpaired in mind and body: almost it can be said that he died in harness; within a few days of his death he was doing his municipal work and giving free scope to his robust common sense as a magistrate for the Borough. Mr. Clay possessed a talent amounting to genius for detecting frauds, and the unfortunate had in him a kindly helper: many a discharged prisoner has been able to make a fresh start in life through his care and kindness; every agency connected with the helping of those who cannot help themselves was indebted to the watchful care of the good citizen of Cambridge who has been taken away.

Turning to lighter subjects, we may notice that the Greek question comes up for settlement on March 3 and 4. Incidentally, one may observe that the scheme as it is to be voted upon raises more than one issue; it puts before us a highly complex examination, framed upon the model of the London University Matriculation in its worst days. This is to be in substitution for the present Little-go—Greek and Latin, of course, being made alternatives. What nobody yet seems to have grasped is the fact that the schedule of subjects for the new Previous trenches considerably upon the ground of the existing General, so as to make a re-organization of that examination absolutely necessary. Whatever may be the merits of the new scheme (and they certainly are hard to find), it is abundantly clear that the issues to be decided in the Senate House are of the most confused character. Already one eminent supporter of the Syndicate has withdrawn his allegiance on the technical grounds that the scheme is unworkable for special reasons quite apart from the Greek question. This is not to be wondered at when we consider that hardly a single member of the anti-Greek majority of the Syndicate has

any qualifications to speak as a successful teacher of the poll man. Doubtless we shall have alarms and excursions, flour-bags, squibs, and bonfires before it is all over.

There has been a very pretty little discussion going on lately *à propos* of a proposal to transfer the law books of the University Library to the new Squire Law School. There seemed to be hardly any possible objection to a plan which removed books from an overcrowded library where little use could be made of them to a place where they will be accessible at more convenient hours to those who really require them. For years the Library authorities have been clamouring for space; now a sensible proposal is made a few people who cannot require law books show a prompt desire to interfere with the comforts of the lawyers. However, the agitation has fizzled out, and the books will be duly transferred.

The late Mr. Frank McClean has bequeathed to the University his splendid collection of MSS. and early printed books, with many precious examples of ancient art. Special mention should be made of the Limosin enamels and some Limoges *champlevé* work of the thirteenth and fourteenth centuries. Many of the specimens come from such celebrated collections as those of Bateman, Magniac, Spitzer, and Carmichael. Mr. McClean also bequeathed the sum of £5,000 in aid of the further equipment of the Newall Observatory.

The publication of the report of the Board of Examinations discloses the curious fact that the Law Special has at last proved its title to being the most popular avenue to the B.A. degree. For the first time this subject bears away the pride of place from Theology; History and Chemistry come next after a long interval, while, with the exception of Engineering, all the other subjects seem to be losing in popularity.

A letter from Mr. Mark Judge addressed to the *Times* on the question of our sanitary administration in Cambridge has provoked much discussion; the Town Council are apathetic and the University Authorities are lethargic or moribund. We have periodical scares about diphtheria, scarlet fever, and smallpox, or the more humble measles and influenza; but the death rate among undergraduates keeps low, and a policy of judicious suppression of facts is universally adopted as the safest. Some day people like Mr. Judge will tell us some more things which we know already, and then we shall be sorry for ourselves.

The coming General Election at Cambridge will be amusing, to say the least of it. Sir Robert Fitzgerald does not seek re-election for the borough in the Conservative interest, having never quite recovered from the severe handling he received from the roughs at Cottenham some three years ago. Mr. Buckmaster, the Radical candidate, is progressing well, and assiduously courts the Barnwell vote. No Conservative candidate has yet been chosen, but the names of Colonel Coldwell, Mr. George Kett, and Dr. Dalton are freely mentioned.

The University election will also be interesting. Mr. J. F. P. Rawlinson, K.C., was selected at a meeting of the Conservative party instead of an eminent scholar who was nominated by the self-elected caucus. The Radicals will doubtless support Sir John Gorst. If the General Election comes in the Long Vacation, we shall all be sorry and vote by proxy.

The University crew are bad: rumour says that Oxford are worse. The standard of college rowing here is, however, improving; so that we can indulge in hopes for the future.

Our Association Football XI. went down before Oxford—another surprise for the experts. Our golf team is a remarkably strong one: in this department of sport we make a brave show in spite of the handicap of our so-called links at Coton.

There have been some festivities in the way of balls given by the Pitt Club and the United Hunts. Even the least expert performers had room and enough for their gyrations.

The Honourable Artillery Company paid us a visit this month, and had a combined field day with our local army. The hostile forces attended the theatre in the evening and the proceedings were lively.

We have had several varieties of weather during the current month and are prepared for more. We go down gladly on March 22 and return on April 27.

THE School of Local History founded in connexion with the University has begun its work.

The members have devoted themselves to collecting, copying, and translating various materials for the history of Liverpool, and the committee intend to publish a series of works on local history. Volumes bearing on Lancashire, Cheshire, and

other parts of the district served by the University will be included in the series. The first five volumes will embrace (1) Royal Charters to Liverpool; (2) Moore Charters; (3) Liverpool under the Tudors; (4) Liverpool in the Civil War; (5) Municipal Government in the Nineteenth Century. Succeeding volumes will form either collections of mediæval documents or studies of the more recent history of the city.

The affiliation of St. Aidan's Theological College, Birkenhead, to the University of Liverpool was celebrated at a meeting held in the Birkenhead Town Hall (February 20). The Mayor of Birkenhead, who presided, said that one of the main results of the affiliation which had just been brought about would be that theological students would now be able to take degrees, the want of which in the past had militated against the interest of the students and the success of the college. The students would now have the benefit of an Arts course offered to them, to be engaged in concurrently with that of Divinity. The Vice-Chancellor of Liverpool University (Mr. A. W. Dale) said the object of the affiliation was to encourage those who would become students of theology to lay a broad and strong foundation on which to build. On the motion of the Bishop of Chester, seconded by the Bishop of Liverpool, the meeting expressed approval of the affiliation and its cordial wish that prosperity might attend the scheme of co-operation. It was further resolved that an endowment fund for the provision of scholarships should be raised with a special view to meeting the increased responsibilities arising out of the affiliation of the college to the University.

THE *Manchester Evening News* has been informed that the directors of the Vulcan Boiler and General Insurance Company, Limited, 67 King Street, Manchester, are arranging with the authorities of the Victoria University, Manchester, to establish a Fellowship for Study and Research in Engineering. This, our contemporary believes, is the first instance of such a step being taken by any firm, the company who have initiated this new departure having a very large business of an engineering character. They are, therefore, deeply interested in the preparation of students suitably equipped to assist them in carrying out the duties involved in a business of the nature carried on by them. It is an example which we trust will be extensively followed.

THE Vice-Chancellor has received an intimation from the Secretary to the Gilchrist Educational Trust that the Trustees have decided to assign to the University a post-graduate studentship of £80, tenable for one year, to be awarded to a student of either sex who has taken a degree with Honours in modern languages and is proposing to become a teacher in a secondary school. The purpose of the studentship will be to enable the holder to pursue a special course of work abroad with a view to becoming a teacher of modern languages. Similar studentships will be assigned to the Universities of Manchester and Liverpool, and the new studentships tenable at the three Universities will take the place of the scholarship and studentship hitherto maintained by the Trustees in the Victoria University.

THE handsome offer towards the Sheffield University Fund, which we record in another column, has been made (says the *Sheffield Telegraph*) by Mr. William Edgar Allen, of Whirlow House, and of the Imperial Steel Works, Tinsley, Sheffield. Mr. Allen, in communicating his generous intention through a friend to the University authorities, indicated the idea which was dominant in his mind and which led him to make the offer in the form he did. "Mr. Mark Firth and Mr. Thomas Jessop," he wrote, "both did grand things, and Sheffield people would no doubt like to see the names of their prominent citizens of to-day handed down to posterity in connexion with the University scheme." The people, he thought, would be gratified to see chairs endowed in perpetuity with the names of those who occupy the leading positions in the manufacturing and professional life of the city. Of course, there are others who are not thus actively engaged, but who are in a position to give help in this or other ways, and probably would be willing to do so. The University Committee, our contemporary understands, will now take steps to bring Mr. Allen's offer directly before those who are most likely to be in sympathy with it, and it is to be hoped that they will meet with a whole-hearted response.

Wales—
Aberystwyth. THE University College, Aberystwyth, is about to lose a valued servant by the retirement of Miss Carpenter, Principal of the Alexandra Hall of Residence. She has held the appointment since 1886, and has taken an active interest in the many and important changes through which the college has passed during that time. The Teachers' Guild and the Society for the Development of Education as a Science have found in her a warm supporter, and generations of women students speak in the highest praise of the way in which she has performed her duties as Principal. Miss Carpenter's resignation will come before the next meeting of the College Council.

Dublin. THE Board of Trinity College has elected Lieut.-Colonel George Speirs Alexander Ranking, M.D., to the vacant Chair of Arabic, Persian, and Hindustani. Colonel Ranking at present holds the position of Examiner in Oriental Languages under the Government of India. He graduated from St. Catharine's College, Cambridge, in 1874, and obtained his M.D. in 1879. He has written several works on Oriental languages, which have been adopted by the Indian Army authorities. In addition to these, he has just completed a translation of General Baden-Powell's "Aids to Scouting," and is at present engaged on an English-Hindustani dictionary.

IMPROVEMENT OF TECHNICAL EDUCATION. EMPLOYERS AND APPRENTICES.

SPEAKING recently at the annual distribution of prizes of the West Hartlepool Technical College, Sir Christopher Furness, the member for the borough, after dealing with the local circumstances of that institution, said:

In Germany 90 per cent. of the young men engaged in the steel trade attended technical classes. But that was the case, not only in Germany, but also in Switzerland and America, and, unless the youths of this country realized the great importance of acquiring a good technical knowledge, the time would come when the employers would be compelled to make it a fixed rule that none of those who did not regularly attend such classes should be engaged in their respective works. None of them liked compulsion. It was much better to impress upon every one the importance of realizing their responsibility in this matter, and by moral suasion to encourage them to walk in the right path, and make those little sacrifices which in the end would prove to be for their own benefit. But, in the event of that failing, it would, he was convinced, become necessary for the employers of this country, when they were arranging their articles of indenture for apprentices, to make it compulsory for every apprentice to attend technical classes.

He had made it his business to visit different works in various manufacturing countries of the world. What did he find? A year ago he visited some of the principal works in Germany and Switzerland, and a year before that the principal works in Germany and America, and he found that all the works, not only engineering but also those connected with the steel trade and other different industries, were crowded, as it were, with highly intelligent, active young men, who were going to do great service for their country in the future. No effort should be spared to impress upon the youths of their town that, as in America every boy born into that country was open to win the Presidency, so to every boy born in their town was open the highest position that was within their grasp. It was not sufficient to say that, if a boy's parents were poor, there was no chance of his rising in the world. It was not sufficient for him or his parents to say that the laws of the country were such as to make it impossible for the poor to improve themselves because the laws were passed exclusively in the interest of the rich and well-to-do classes. It was within the power of any young man, be his parents rich or poor, if he would make the necessary sacrifices from his earliest days, by steady, plodding perseverance, to win the highest position in the commercial world or any other walk of life.

The last time he was in America spending a few days with one of the great employers of labour there, a man who by his own industry and perseverance and energy had raised himself from the humblest position to that of an enormously large employer and an exceedingly wealthy man, he (Sir Christopher) asked him what had been his secret in the selection of so many thousand heads of departments and staffs in his various works. He replied that he always had around him young men who, he saw, were steady and industrious, and possessing the desire to improve themselves, but first of all he used to get to know whether a young man had good parents. If, he said, they could find a boy had a good mother, in nine cases out of ten they would find that the boy was of the right stamp.

They heard, he said, a good deal about dumping some time ago, and he was very much exercised in his mind as to why Germany was able to send steel to this country at a lower price than was current here. He sent experts, not only to Germany, but to other countries, to report to him as to the consumption of fuel per ton of steel produced, for he found that, though in many respects some countries were much behind us, yet

other countries were in various particulars ahead of us. The result was that he set to work to encourage his very able managers at the South Durham Steel Works to see if it were not possible to reduce the cost of fuel per ton of steel produced. This was over a year ago. That day, in going closely through the figures, he found they had saved in consumption 102,000 tons of coal, and yet produced the same quantity of steel.

THE TEACHING OF HYGIENE.

ADDRESS BY PRINCIPAL SIR ARTHUR W. RÜCKER.

A CONFERENCE on School Hygiene, organized by the Royal Sanitary Institute with the view of maintaining interest in, and preparing the way for, the International Congress on the subject to be held in London in 1907, was held at the University of London on February 7-10. On the opening day the Duke of Northumberland, President of the Institute, presided, and Sir Arthur W. Rücker, President of the Conference, delivered an address on the co-ordination of the teaching of hygiene.

He said he took his appointment to the Presidency as a proof of the importance the Conference attached to the place of hygiene in any well considered scheme of education. He referred to the correspondence in the *Times* as showing that the advocates of classical and of scientific education were afraid of each other, both sides complaining that their subjects were unduly neglected, and neither party believing that the principles it upheld were secure in the struggle for existence unless supported by rigid examinational regulations. Amid the welter of conflicting opinions the subject in which that Conference was chiefly interested had been steadily making its way to a position of more importance in educational curricula. Sanitary science had long occupied a relatively prominent position in this country; so that now the determination with which we insisted on sanitary precautions struck the foreigner with amazement. M. Emile Boutmy, of the Institute of France, contended that in England there was "no province with clearly defined boundaries which belongs theoretically to private individuals alone, and access to which is, in principle, denied to the State." In our regulations as to the isolation of persons suffering from infectious diseases, M. Boutmy recognized "a power of coercion which has no parallel in France," and described the intervention of the officer of health as "insolent and arbitrary." Average English opinion would not agree that in sanitary regulations the State or Local Authorities had outstepped the limits of their legitimate functions. But where there was not the same unanimity, as in the case of building laws, he deprecated risking reaction by moving too far in advance of public opinion. He gave reasons for assurance that the claims of hygiene in elementary-school education were being widely recognized, but observed a curious difference between the official theory of the Board of Education as to what was desirable in elementary schools and the practice followed in the education of the richer classes. He believed in the study of the elements of science, hygiene included, being carried on side by side with the study of language and arithmetic, from a very early stage. He discouraged a too exclusive reliance upon compulsory examinations in the promotion of the study of hygiene, and defended the new system of the University of London against the supposition that in abandoning a particular method of enforcing its views it renounced its right to express opinions as to what was desirable in education, or to use more legitimate methods of giving effect to them. He described and approved the Government regulations for training of teachers in hygiene, but regretted the small number of responses to the Sanitary Institute when it offered advice as to the preparation and working out of schemes under these regulations. The magnificent gift of the Goldsmiths' Company to the University of London was to be utilized, in part, for the training of teachers for elementary schools. In the scheme of education there hygiene would form an essential feature. The knowledge of school hygiene was required by authorities granting diplomas of education. He looked to the success of their endeavour for the reasonable cultivation of the study of hygiene not to its figuring in the list of subjects for Matriculation, but to the steady pressure of opinion. They would insist, as they had insisted, that the elements of education should include not merely the study of other forms of life, but some knowledge of the dangers by which they were surrounded and of the means of keeping them at bay. They would insist that those to whom young lives were entrusted should have learned, as part of their business, the main outlines of hygienic science; and in extending their influence further than it had already reached they would go forward with the consciousness that in a very short time the merits of their cause had already attained an amount of general acceptance which was as hopeful as, in educational controversies, it was rare.

A number of excellent practical papers were read and discussed at the Conference, including "Physical and Mental Development during School Life," by Miss A. J. Cooper; "Physical Inspection," by Dr. A. K. Chalmers; "Building and Equipment," by Sir Aston Webb, R.A.; "Sanitary Inspection," by Dr. J. F. J. Sykes; "Training of Teachers," by Prof. C. S. Sherrington, F.R.S.; and "Training of Scholars," by Prof. Findlay.

AS TO THE TEACHER.

By Prof. JOHN DEWEY, Chicago.

[From the "*Popular Educator*."]]

If there is a single public-school system in the United States where there is official and constitutional provision made for submitting questions of methods of discipline and teaching, and the questions of the curriculum, text-books, &c., to the discussion and decision of those actually engaged in the work of teaching, that fact has escaped my notice. Indeed, the opposite situation is so common that it seems, as a rule, to be absolutely taken for granted as the *normal and final condition* of affairs. The number of persons to whom any other course has occurred as desirable, or even possible—to say nothing of necessary—is apparently very limited.

But until the public-school system is organized in such a way that every teacher has some regular and representative way in which he or she can register judgment upon matters of educational importance, with the assurance that this judgment will somehow affect the school system, the assertion that the present system is not from the internal standpoint democratic seems to be justified. Either we come here upon some fixed and inherent limitation of the democratic principle, or else we find in this fact an obvious discrepancy between the conduct of the school and the conduct of social life—a discrepancy so great as to demand immediate and persistent effort at reform.

Just because education is the most personal, the most intimate, of all human affairs, there, more than anywhere else, the sole ultimate reliance and final source of power are in the training, character, and intelligence of the individual. If any scheme could be devised which would draw to the calling of teaching persons of force of character, of sympathy with children, and consequent interest in the problems of teaching and of scholarship, no one need be troubled for a moment about other educational reforms or the solution of other educational problems. But as long as a school organization which is undemocratic in principle tends to repel from all but the higher portions of the school system those of independent force, of intellectual initiative, and of inventive ability, or tends to hamper them in their work after they find their way into the schoolroom, so long all other reforms are compromised at their source and postponed indefinitely for fruition.

MR. ROBERT TUCKER.

It is with great regret that we announce the death in his seventy-third year of Mr. Robert Tucker, M.A., whose name is a very familiar one to the readers of our mathematical columns. It is now some time since, owing to a complete failure of health, Mr. Tucker was obliged to leave London, and to relinquish one after another the occupations to which he had devoted the best years of a long and very busy career. Even if he had done nothing else, his mastership at University College School and his work as an examiner in connexion with various public examining boards would have demanded no small expenditure of labour and energy, but it is not either as teacher or as examiner that he became so well known to our readers and to a large number of mathematicians. From the commencement almost of the existence of the London Mathematical Society until about two years ago, a period of thirty-five years, Mr. Tucker acted as Honorary Secretary to the Society, serving it in that capacity with surpassing zeal, and so thoroughly identifying himself with its interests as to be considered one of the leading promoters of its progress and success. It was Mr. Tucker also who accomplished the task of editing the papers of the late Prof. W. K. Clifford. The mathematical section of *The Educational Times* has from its earliest days reckoned Mr. Tucker amongst the most active and regular contributors to its columns, and problems and articles were received from him until within a few weeks of his death. His investigations in mathematical science were confined chiefly, though not entirely, to the modern geometry of the triangle and the circle, and he was the author of a considerable number of original papers, many of which will be found in the volumes of the *Proceedings* of the London Mathematical Society. We desire to express on our own and our readers' behalf sincere sympathy with Mrs. Tucker and her daughters.

THE SCOPE OF A UNIVERSITY.

VIEWS OF A BUSINESS MAN.

THE most striking incident in the visit of Mr. Mosely to Leeds (February 6) was a speech by the Mayor of Bradford (Alderman W. E. B. Priestly). Mr. Mosely set forth in the Philosophical Hall the more important lessons learnt by his recent "Commission of Educationists" to the United States, and further enforced them at the dinner given in his honour by the Leeds University Court, naturally dwelling with the greater emphasis on "the need in the new University of a sound and thoroughly scientific education in commercial affairs." The Mayor of Bradford supplied the wider outlook:—

He remarked that towns like Bradford were able to train their own students in purely technical work, and they looked to the University of Leeds for something higher. Bradford, as the centre of the worsted trade, could train its students in that branch. He did not say this to belittle the University of Leeds, but rather to raise it, and to get the citizens to appreciate what it could do. He must dissent from the remark that a university must be simply an institution to educate business men for business affairs. This could best be left for the particular trades to see to in the different towns. They had in Bradford a hundred students in their Technical College, and it was for the University to undertake a branch of education that did not lie within the scope of places like Bradford, Halifax, or Dewsbury. They appealed to the University of Leeds to undertake this education if they hoped for the support of the great towns. They should look at education from the highest standpoint, and not from the lowest. Some of their students in Bradford longed for more than they could obtain locally, and the citizens hoped that instead of sending them to the older universities, they would get all they required in the University of Leeds. That could not be expected if they reduced the University simply to the level of a technical college. He would like to see a system established by means of which, through the rates, they in Bradford would be able to send to this University several students to receive the education which could not be given locally. Let them look at the matter from the Arts side, the Science side; but not necessarily from the applied science side. If they did so restrict it, they would have great support from the Clothworkers' Company; but, he asked, what was going to be the end of such education? They would be simply training students for their own particular industries; and in Bradford they had their own ideas as to what was necessary for local industries. If they regarded education merely from that standpoint, it would be very difficult for them to get sympathy from Bradford and other outside towns. "But surely," he remarked, "education is not going to be reduced simply to a system of technical training, nor are students, I hope, going to fight the battle of life merely from the commercial standpoint. No country has ever been built up on such a foundation. There is something higher that appeals to us, and it is something that has produced the greatest thinkers, and the great men who have built up this Empire." Industries are built up by technical knowledge, but this country could hope to fulfil its destiny only by giving heed to the highest forms of learning.

THE SCOTTISH MINUTE ON TRAINING.

THE FUTURE OF THE TRAINING COLLEGES.

IN a "communicated" article in the *Aberdeen Free Press* (February 6), a writer of some enthusiasm remarks that the new Minute of the Scotch Education Department on the training of teachers "marks an epoch in the history of education in Scotland." It is, indeed, "a splendid piece of constructive administration, bearing the mark of a master hand, and it shows a fine combination of audacity and prudence, most refreshing and encouraging amid so much peddling and half-hearted effort at reform by means of legislation."

The main design of the Minute is to provide a sufficient supply of well trained teachers, which does not at present exist, for the nation's requirements. It aims at correlating the different agencies at present at work and imparting the unity of a single comprehensive national system. The existing university machinery is more or less closely adopted, but it is expanded in all directions—representation, educational institutions, organization, finance. The training colleges are absorbed in the system, but, far from being injured or restricted, they are granted a much more extended sphere of usefulness and set free from the restrictions which are at present thought to hamper them. Still retaining their religious instruction, they drop their denominational character in order to assume a national one. The nation will henceforth enjoy directly the benefits of their organization and of their highly trained and highly accomplished and devoted staffs. The universities also will be the gainers if they also are able to take advantage to some extent of the services of these highly skilled instructors.

The ideal foreshadowed by the Minute is complete, or at least adequate,

for every teacher, elementary or secondary, graduate or non-graduate. Both quantity and quality will be improved; we shall have more teachers, and these better trained than at present. An inherent part of the ideal is to bring as many of the students as possible into touch with the free intellectual life of the universities. Liberal culture will widen the horizon, raise the teachers' aims, and at the same time provide the most secure basis for professional studies and training. The university influence will penetrate even to institutions remote from its seat, where these are utilized, as they may be, for subsidiary courses of instruction. And it is certain that the university will itself benefit from the extension of its sympathies and activities. Many will regard the retention of religious instruction as among the most valuable features of the scheme; others may be disposed to take an opposite view. The Department has taken the line of least resistance in maintaining the *status quo*. If properly administered, the scheme of religious training will prove a sanctifying influence which could not without serious detriment be dispensed with; if not, it will die a natural death. The Churches have a great opportunity, but it will rest with them to use it aright.

One is not disposed to cavil at points in the Minute which are controversial, or at any rate open to criticism. At most they are details, for the main principles are eminently sound and sane. A difficult and thorny subject has been handled in an able and statesmanlike fashion. All interested in education—and who is not?—will hope for its speedy ratification by Parliament.

THE PROPOSED ANTHROPOMETRIC SURVEY.

By JOHN GRAY, B.Sc.*

THE greatest nation of the future will be the nation which best realizes the extreme importance of the scientific study and culture of the physique of its people.

Universal education has been for many years regarded, in this country, as the best means of increasing the efficiency of the nation, and the State has spent enormous sums in spreading elementary and technical education among the people. There are signs, however, that we have now nearly reached the limit of the improvement which can be effected by this means. The spectacle of a national educational system attempting to cram knowledge into the exhausted brains of tens of thousands of underfed children is not an edifying one; and it is obviously not the best way of improving the efficiency of that particular class of the population.

IS IMPROVEMENT OF OUR PHYSIQUE POSSIBLE?

Before undertaking any measures for the improvement of our national physique, we must decide whether such improvement is possible. In the extremely able report of the Interdepartmental Committee appointed by the Government to investigate this question the conclusion arrived at is that there is no evidence that progressive physical deterioration exists among the people generally. But there is abundant evidence that serious deterioration exists among certain classes of the population. For example, 40 to 60 per cent. of candidates for enlistment in the Army are rejected on account of physical defects. And these defects are not inherited (and therefore inevitable), for competent authorities allege that 90 per cent. of the children belonging to the same class from which the recruits are drawn are born physically healthy.

We see, therefore, that contingents of the lower strata of society start life with 10 per cent. of inefficient, but before they reach adolescence the inefficient amount to 60 per cent.: 80 per cent. of the physical inefficiency of the submerged tenth is due to their environment, and may be removed by making suitable changes in environment.

THE CAUSES OF DETERIORATION.

What are the causes of this deterioration? There can be little doubt that much of it is due to the environment—to the unhealthy conditions under which these people live. Overcrowding, pollution of atmosphere, bad and insufficient food, are accepted by most authorities as conditions that exercise an unfavourable influence on the physique, but especially on the growth of the juvenile population; and there are many others.

Though there is general agreement as to the enumeration of causes that unfavourably affect the physique, there is little agreement among the authorities as to the degree in which these causes affect the physique. Some allege that pollution of the

* Paper read in opening a discussion on the subject at a joint meeting of the Childhood Society and the British Child-Study Association at the Parkes Museum on February 16, Sir William Church, Bart., K.C.B., &c., in the chair.

atmosphere is responsible for nearly the whole of the physical deterioration we find in towns; others favour unhealthy and unsuitable food.

Most authorities believe that the rapid concentration of the population of the country in large towns is injurious to the national physique. There is much evidence in favour of this view. But, on the other hand, there is much evidence against it: the death rate in towns is less than in the country; finer and healthier children can be found nowhere in the country than in healthy suburbs of large towns.

It is evidently of primary importance to settle these disputed points, and to determine the amount of influence exerted by the different causes of physical deterioration, before remedies can be intelligently applied. The only way to determine the true causes of physical deterioration and their amount is the establishment of a continuous Anthropometric Survey of the People.

AN ANTHROPOMETRIC SURVEY.

An Anthropometric Survey to be of any value must be carried out by the State. Since it must be carried out over the whole population and at intervals of ten years continuously as long as the nation exists, it is evidently not a work that can be carried out by private enterprise.

All authorities are agreed that anthropometric records are the only tests of the national physique available, and that, if collected on a sufficient scale, they would constitute the supreme criterion of physical deterioration or the reverse.

The usual anthropometric tests applied are measurements of a few dimensions of the body, but the information which we derive from these data is not restricted to the body only, for the body and the mind of man are parts of a single entity, and every part of this entity is correlated to every other part. In collecting anthropometric data about the body, we acquire at the same time a great deal of information about the mind. This is of great importance, because it is much more difficult to measure the mental characters directly; though a certain amount of progress has been made even in this difficult subject.

HOW THE SURVEY IS TO BE CARRIED OUT.

It is obviously necessary to consider whether such a survey as is required can be carried out at reasonable cost.

Fortunately it is not necessary to measure the whole of the population once every ten years. Though there is considerable variation in the average dimensions of the people in different classes and in different parts of the country, it is not so great as to make it difficult to get a homogeneous population in a limited district. It is considered that, if the country were divided into four hundred districts, the population in each of these districts might be regarded as practically homogeneous. All that is necessary in a homogeneous population is to measure a sample of about 1,000 of each sex. This would mean the measurement every ten years of $400 \times 2,000 = 800,000$ adults. A much larger number of children, however, must be measured, because only children of the same age can be considered homogeneous. If we divide the children into ten age groups of one year, we should have to measure about 8,000,000 school-children every ten years. This means that the whole of the school-children in primary schools would have to be measured once every ten years.

Now there is no necessity for carrying out this physical survey in one day, as the census is carried out. If carried out in that way, it would be enormously expensive. The work of measurement may be spread uniformly over the ten-year period. In that case a small number of specially trained surveyors (about thirty), if constantly employed, could carry out the survey, provided they got assistance from school teachers and others in matters not requiring expert skill.

The scheme recommended by the Physical Deterioration Committee included, in addition to the Anthropometric Survey, a Register of Sickness, and an Advisory Council.

The Register of Sickness would be of great value, since it would supply us with reliable statistics of the health of the community. It was proposed that the information should be collected by Poor Law medical officers. If the proposed scheme of medical inspection of school-children should be carried out, a great mass of valuable information could be obtained in this way, and the results could be easily correlated with the physical data obtained by the Survey.

The Advisory Council is intended to serve as the brain of the scheme to digest and analyze the data supplied by the Anthropometric Survey and the Register of Sickness. It would also advise the Government on all legislative and administrative

points concerning public health in respect of which State interference might be expedient. The Advisory Council would consist of members representing the Departments of State within whose province questions touching the physical well-being of the people fall, with the addition of members nominated by the medical corporations and others.

The cost of an Anthropometric Survey has been estimated to be about the same as that of the Geological Survey at present financed and carried out by the Government.

Can any one reasonably believe that a survey of the geology of the country is of greater value to the State than a survey of the physique of the people? If challenged, one might find it difficult to prove that the Geological Survey had added anything to the material wealth of the country. The coal and metal miners would have found their coal and their ores about as well without it. It has occasionally indicated the existence of coal in unexpected places, often to the subsequent regret of the unfortunate shareholders.

I do not make these hypercritical remarks with the object of condemning the Geological Survey. Every self-respecting civilized nation ought to have a Geological Survey for the sake of adding to knowledge, if not to wealth.

I have no hesitation in saying that a national Anthropometric Survey would add to the wealth of the nation as well as to knowledge. One immensely powerful factor in the evolution of a people is the moral environment, or public opinion. This public opinion, as Mr. Galton recently explained at the Sociological Society, has a powerful influence on marriages, and thereby on the elimination of the unfit and the more rapid multiplication of the fit. In many other ways public opinion is powerful: for example, in ameliorating the material conditions of life, and in removing the less fortunate part of the population from such conditions as exist in the slums of our great cities.

Now nothing influences public opinion so strongly as trustworthy statistics; and such trustworthy statistics of the condition of the people and of the influence which their environment exerts upon them can only be obtained from a continuous anthropometric record.

The crying need of the nation at the present time is not fiscal reform, but physical reform; and the statesman who recognizes this and initiates the movement by establishing a well organized system of collecting anthropometric statistics will long be remembered with gratitude by his countrymen.

OPEN COURT.

They say . . .

Quhat say thay?—Lat thame say!

A PLACE FOR PHYSIOLOGY IN THE CURRICULA OF PRIMARY AND SECONDARY SCHOOLS.

By DAVID SOMMERVILLE, M.D., M.R.C.P. Lond.,
Senior Demonstrator of State Medicine, King's College, London.

It is universally admitted that Germany's devotion to science has made that country what she is. America, through the application of the latest achievements of science to the everyday work of life, is carving for herself a course which, at every point, commands success. To the unbiassed, educated, and travelled observer, it is patent that both these countries are, in many respects, ahead of England, and that yearly the distance in the race between them and England increases.

There is no intention in this paper to criticize English methods of education further than briefly to remark that, like many other institutions which have served their day and generation, these methods for the most part are old and out of date. Competition in every department of life, and especially in the race for commercial supremacy, necessitates our looking well to the foundations on which we build our hopes of holding an honourable position amongst the nations of civilization in the future. The real foundation in question is education—education in its widest sense.

It is being demonstrated year by year that in every corner of commercial industry success is obtained exactly in proportion to the extent to which accurate scientific knowledge is applied to such industry. The great aim of the country, therefore, ought to be to put the rising generation, as it appears on the scene, in the best possible position for obtaining accurate scientific knowledge, such knowledge as will enable us to hold our own with all

foreign countries in every department of national activity. It is high time that the national conscience thoroughly awoke to this duty.

On looking abroad in any sphere of life it is very evident that an important cause of failure is lack of good health; numbers of truly first-rate men and women go under because of inability to fight their way through want of physical force.

Of late, much has been accomplished for the amelioration of the health of the people by applied sanitary science; much remains to be done; and preventive medicine (or sanitary science, as you please), perhaps the highest department of medicine, has a great future before it. But better things will appear when the masses are so educated that they will individually do for themselves what sanitary science is now doing for them *en masse*. Infinitely better is it that a man should wash himself than that he should be washed by the State.

The early detection of abnormal and pathological conditions in children should be an important consideration with all educational authorities—so important that every school should have a medical officer attached to it. That attention has lately been drawn to feeble-minded children, and that efforts are being made to educate these on lines differing from those employed in ordinary cases, is a step in the right direction. All these mental derelicts are physically deficient, and the best results to be hoped for in connexion with their training will be obtained by directing the necessary remedial agencies to the physical deficiencies. It is obvious that the initial detection of such children presupposes on the part of teachers a knowledge of the normal—a knowledge of physiology. The great gulf between body and mind that formerly existed in the ideas of men is gradually narrowing under a constantly increasing knowledge of tissue structure and function; and eventually it will doubtless be admitted that every phase of mental energy, however intricate, is but the correlated functional expression of certain definite portions of brain tissue undergoing stimulation. Our only hope of producing sound minds is first to produce sound bodies. A moment's reflection on the teacher's work from this point of view will enforce the conviction that physiology should play a large part in his training.

In the past, education dealt only with the purely mental aspect of man's life. To-day it is recognized (and in America to a much larger degree than in England) that education must include a great deal more—that, in fact, the body must be physically educated, and fitted for endurance—at times even to the point of strain, if necessary—otherwise mental developments, even of a high order, may be utterly useless. More than ten years ago I listened with enchantment to lectures on physiology delivered to the upper forms of certain American secondary schools in that fluent, attractive, and persuasive manner which is characteristic of many American lecturers. These interesting "talks," as they were called, embodied the soundest philosophy, and there is not a shadow of doubt that they were of the highest practical benefit to the eager youths who gave them an intelligent and attentive hearing. That the attention in one particular school at least was intelligent, and that the full import of the lectures was grasped, was abundantly demonstrated by the excellent criticisms of the lectures which appeared in the school magazine, conducted by the lads of the leaving class. At another institution, which acted as a feeder for certain eastern Universities, I lectured for a time periodically on physiology, and was struck with the intelligence and enthusiasm displayed by the students.

It may be mentioned, in passing, that, if any one needs to be convinced of the value of leading a physiological life—that is, the life that Nature intends—sufficient proof will be found in the work carried on by Mr. W. M. F. Round, in New York State, in connexion with the Guild of St. Christopher. There, on a large farm, a number of boys rescued from the cities just as they have commenced the downward course of the criminal are trained on purely natural lines—an outdoor life sustained by simple, wholesome food, to which is added a small amount of sound moral advice. The results of this work are beyond the expectations of the most sanguine, and are well seen in the excellent letters which come to the Superintendent and his wife from all parts of the United States and Canada from past inmates of the home. Frequently the old boys, now excellent specimens of men, call in person on their past benefactors. Of the value of a physiological life, even when applied to physical and moral wrecks, this work is to me a most cogent argument.

In a paper that must of necessity deal generally with the subject, it would be absurd to attempt to discuss at length the various departments of physiology from the teaching of which

advantages are likely to accrue. It is manifest that a large portion of the subject lies wholly outside the wants of the lay public, and accordingly only portions bearing directly on the essentials of human life and health may be mentioned as suitable for the schoolmaster and his pupils.

Is it necessary, for example, to present a plea for introducing the study of the principles of respiration to any boy or girl? Life depends for its very existence on a constant supply of oxygen taken in at the lungs and passed on to the cells of the various tissues: the instant this supply ceases life becomes extinct. Does it not appear a matter of the most pressing import that every human being should be taught something of how he breathes, and what he breathes? It is impossible to overestimate the value of an elementary, but sound, knowledge of the principles of respiration in their bearing on the prevention of pulmonary consumption, on the necessity for free ventilation in all living rooms, and, in short, on a multitude of burning hygienic questions of the day. Our large cities are growing rapidly in population at the expense of the country, and with this growth there appear as inseparable appendages a host of insanitary influences, which, even in a single generation, produce alarming results. No efforts of a general type emanating from public bodies are ever likely to stem the tide of evil or save these degenerate populations. If any of them ever should obtain salvation by returning to the country, it will be effected through an educated, intelligent conviction working from within. What a boon it would be to thousands if they could only see (and act upon the knowledge) that on the land, in the open, with abundance of fresh air, sunlight, and simple food, Nature has provided an environment for man where he may lead a healthy and happy life!

Or, to take another example: Can it be imagined that the ware-room girl, or any other individual selected from a more elevated station in society, who ekes out a miserable existence on four meals of bread and tea a day, would continue this destructive bill of fare if once she had explained to her a few fundamental principles connected with foodstuffs and their digestion? The tea she drinks contains little or no real nutriment, but, on the contrary, supplies—in the form in which she generally uses it—a certain quantity of tannic acid, whose physiological action is to put an end to the digestion of the most important foodstuff contained in the bread she eats. It is quite unnecessary to multiply instances.

That the teaching profession is not made to hold a much higher position socially and financially is much to be regretted, for it needs for its work the best men and women the country can produce.

Mr. Kipling, in his "Black Sheep," has well illustrated the contention that a teacher destitute of all knowledge of physiology is an unsafe guide of youth. The child depicted in the tale is allowed slowly to lose his sight through the crass ignorance of his teachers and guardians, and during the process these benighted individuals—who, by the way, are representative of a large class—make his life for him a continuous misery.

Individuals and boards of educationalists feign to consider at uncertain intervals what they are pleased to call a "delicate subject." Were it not that much disaster is inseparably connected with this subject, such proceedings would be highly amusing. Sometimes the question is discussed, but always laid aside in the most supine manner. The truth is that often young people, far from vicious, fall in the darkness of their ignorance of the great forces that are within them. No parent, no teacher, ever spoke of such forces throughout the whole period of their educational career.

The question naturally now arises: How are schoolmasters to be prepared for this important work, and what type of individual is likely to succeed? This question leads directly to a consideration of the qualities which constitute any successful teacher of science; and these, in a word, appear to be the possession of a keenly observing and sympathetic bent of mind, a love of the work for its own sake, and, where available, the especial gift (possessed by Faraday and others) of being able to draw from the most commonplace object in Nature—*e.g.*, a shell, a piece of coal, &c.—unlimited stores of the most interesting information, in the most engaging and instructive manner. This faculty, unfortunately, does not always accompany medals and degrees. Too many pedagogues bedizened with parchments prove lamentable failures. The teacher, then, should obtain during his training such an "ennobling glimpse of the glory of his subject" from some such master as will set on fire his own soul so thoroughly that his followers must catch the flame.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the **BENEFITS** of **MUTUAL LIFE ASSURANCE** on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,194,485. Annual Income, £398,982.
Bonuses Distributed, £3,723,720.

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

IMPORTANT NOTICE.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

A History of England. By the Rt.

Hon. H. O. ARNOLD-FORSTER, M.A., M.P. Fully Illustrated. Extra crown 8vo, 816 pages. Cloth, 5s.; cloth gilt, 6s. 6d.

"Has all the ingredients which go to the formation of a universally popular work."—*Daily Mail.*

365th Thousand.

New Edition, with New Illustrations.

The Citizen Reader. By the Rt. Hon.

H. O. ARNOLD-FORSTER, M.A., M.P. Cloth, 1s. 6d.

"The new edition has been reset in a new, clear type, and contains an entirely fresh series of illustrations. The recent Education Acts have, of course, made much alteration necessary, and the revision has been well done. . . . An almost indispensable book, and one we can heartily recommend."—*School Manager*, December 31st, 1904.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & CO., Ltd., La Belle Sauvage, London, E.C.

COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS.

Special Subjects, 1905.

Caesar—Gallic War, Books I., IV., V. By A. H. ALLCROFT, M.A., Oxon., and others. 1s. 6d. each. Vocabulary, 1s. each.

Euripides—Hecuba. By T. T. JEFFERY, M.A. Camb. 3s. 6d.

Euripides—Medea. By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A., Oxon., Lecturer in Latin at University College, Dundee. 3s. 6d.

Horace—Odes, Book III. By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. 1s. 6d. Vocabulary, 1s.

Vergil—Aeneid, Books II., III. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. each. Vocabulary, 1s.

Xenophon—Anabasis, Book I. By A. H. ALLCROFT, M.A. Oxon., and F. L. D. RICHARDSON, B.A. Lond. 1s. 6d. Vocabulary, 1s.

Shakespeare—Julius Caesar, Twelfth Night. By W. J. ROLFE, D.Litt. 2s. each.

BOOKS FOR MATRICULATION (London University).

Algebra, The New Matriculation. Containing a Section on Graphs. By RUPERT DEAKIN, M.A., Lond. and Oxon. 3s. 6d.

Arithmetic, The Tutorial. By W. P. WORKMAN, M.A., B.Sc. 4s. 6d.

Botany, The New Matriculation. By A. J. EWART, D.Sc. 3s. 6d.

Chemistry, The New Matriculation. By G. H. BAILEY, D.Sc. Lond. Edited by WM. BRIGGS, LL.D., M.A., F.C.S. Second Edition, Rewritten and Enlarged. 5s. 6d.

English Course, Matriculation. By W. H. LOW, M.A. Lond., and JOHN BRIGGS, M.A. Camb., F.Z.S. 3s. 6d.

Euclid, Books I.—IV. By RUPERT DEAKIN, M.A. Oxon. With a Preliminary Course of Drawing and Measurement, and Problems in Practical Geometry. 2s. 6d.

French Course, The Matriculation. By ERNEST WEEKLEY, M.A. Lond. and Camb. 3s. 6d.

French Reader, The Matriculation. Containing Prose, Verse, Notes, and Vocabulary. By J. A. PERRETT. 2s. 6d.

Hydrostatics, The Matriculation. By WM. BRIGGS, LL.D., M.A., and G. H. BRYAN, Sc.D., M.A., F.R.S. 2s.

Latin Authors, Matriculation Selections from. By A. F. WATT, M.A. Oxon., and B. J. HAYES, M.A. Lond. and Camb. 2s. 6d.

Modern History, Matriculation. 1485—1901. By C. S. FEARENSIDE, M.A. Oxon. 3s. 6d.

Mechanics, The Matriculation. By WM. BRIGGS, LL.D., M.A., and G. H. BRYAN, Sc.D., M.A., F.R.S. 3s. 6d.

Physics, Matriculation: Heat, Light, and Sound. By R. W. STEWART, D.Sc., and JOHN DON, M.A., B.Sc. 4s. 6d.

Complete Catalogues, and Lists of Books Classified for each of the following Examinations, may be had free on application:—

LONDON UNIVERSITY MATRICULATION, *Inter. Arts, and B.A. (including Special Subjects for 1905 and 1906), Inter. Science, B.Sc., Royal University of Ireland, and Intermediate Education Board, Cambridge and Oxford Local and College of Preceptors', Scottish Leaving Certificate, Science and Art (Board of Education), and other Examinations.*

CURRENT EVENTS.

THE next Evening Meeting of the members of the College of Preceptors will take place on Wednesday, March 15, when Prof. L. W. Lyde, M.A., F.R.G.S., will read a paper on "The Teaching of Geography to Higher Classes," illustrated by a lesson on the Geography of Japan.

THE following lectures and discussion have been arranged by the Childhood Society and the British Child-Study Association at the Parkes Museum (Margaret Street, W.) on Thursdays, at 8 p.m.:—March 2, "Mental Faculty of the Child: its Growth and Culture," by Francis Warner, M.D., F.R.C.P., F.R.C.S.; March 16, "Fatigue in Children," by Miss Margaret McMillan; March 23, "Method of Training Froebelian Teachers," by Miss Lawrence, of the Froebel Institute; and, March 30, Discussion on Provision made under the Elementary Education Act, 1899, for training of Defective Children.

LECTURES under the auspices of the Ambidextral Culture Society will be delivered at the Royal Statistical Society's rooms (9 Adelphi Terrace, Strand) on "Ambidexterity from some points of view of a Physician," by Sir James Sawyer, M.D., F.R.C.P., on March 2, at 8.15 p.m.; and on "Ambidexterity in Art" (with illustrations), by Sir W. Blake Richmond, K.C.B., on March 16, at 8 p.m.

THE first Herbert Spencer Lecture, established by Pandit Shyamaji Krishnavarma, M.A. of Balliol College, will be given in the Examination Schools, Oxford, on March 9, at 3 p.m., by Mr. Frederic Harrison, M.A., Hon. Fellow of Wadham College.

INFORMATION about the Modern Languages Holiday Courses arranged by the Teachers' Guild for this year at Tours, Honfleur, Neuweid, and Santander may now be obtained from the Secretary to the Guild (74 Gower Street, W.C.).

A SPECIAL course of tuition in French for foreign students has been arranged by the University of Rennes, March to June. Particulars as to lectures, lodgings, &c., from M. Feuillerat, 31 Rue de Fougères, Rennes.

THE French Congress of School Hygiene will hold its second meeting in Paris at Whitsuntide. The programme of discussions includes (1) the medical inspection of primary schools; (2) the education of families in school hygiene; (3) vacations and holidays; (4) tuberculosis and teachers; (5) the overloading of school courses and competitions for admission to large schools. Communications to Dr. I. Ch. Roux, 46 Rue de Grenelle, Paris.

THE Senatus of the University of Edinburgh Honours. propose to confer the following honorary degrees:—

D.D.: on the Rev. J. A. Kerr Bain, M.A., United Free Church, Livingston; the Rev. Robert H. Fisher, M.A., B.D., minister at Morningside; the Rev. Alexander Lawson, M.A.,

B.D., Professor of English Literature, St. Andrews; and the Rev. Giovanni Luzzi, Waldensian College, Florence.

LL.D.: on Augusto Pierantoni, Professor of International Law in the University of Rome, formerly President of the Institute of International Law; Baron Edouard Eugène François Descamps, Professor of International Law in the University of Louvain, formerly President and now Secretary General of the Institute of International Law; Francisco Antonio da Veiga Beirão, Professor of International Law in the Commercial and Industrial Institute of Lisbon; Alexander Graham Bell, Washington, U.S.A.; William Watson Cheyne, M.B., C.M. (Edin.), C.B., F.R.S., Professor of Surgery at King's College, London; Sir Arthur Conan Doyle, M.D. Edin.; Prof. George A. Gibson, West of Scotland Technical College; John Hughlings Jackson, F.R.S., LL.D.; William Keen, M.D., LL.D., Professor of Surgery at Jefferson Medical College, Philadelphia; Lord Kincairney; John Horace Round, M.A.; Augustus Waller, M.D., F.R.S., Director of the Physiological Laboratory, University of London; and Colonel Sir Frank Edward Younghusband.

* * *

THE University of Glasgow proposes to confer the honorary degree of D.D. on the Rev. W. Holman, Baptist missionary, Congo State, and author of Congo Grammar and Dictionary and translator of the New Testament into Congo, and on five local clergymen; and the honorary degree of LL.D. on Alexander Crum Brown, M.A., M.D., Professor of Chemistry, Edinburgh; John A. Craigie, Clerk to Govan School Board; Thomas S. Cree, merchant, Glasgow; Alfred Edward Housman, M.A., Professor of Latin, University College, London; Sir A. Campbell Lawrie, advocate, sometime Judge in Ceylon, and editor of "Early Scottish Charters"; Richard Lodge, M.A., Professor of History, Edinburgh; George Macdonald, M.A., Assistant Secretary of Scotch Education Department; and Sir William Whitla, Professor of Materia Medica, Belfast.

* * *

THE University of St. Andrews proposes to confer the honorary degree of LL.D. on Prof. S. Alexander, M.A., Victoria University, Manchester; Mr. George A. Gibson, M.D., D.Sc., F.R.C.P., F.R.S.E.; Mr. Leonard Gow, Hayston, Kelvinside, Glasgow; Prof. Josef Kral, Ph.D., University of Prag, Bohemia; Mr. Charles Stuart Loch, B.A., Professor of Economics in King's College, London; and Mr. Charles Kincaid Mackenzie, K.C., Sheriff of Fife and Kinross.

* * *

PRESIDENT ROOSEVELT has received the honorary degree of LL.D. from the University of Pennsylvania.

◆◆◆

Endowments and Benefactions. MR. SHYAMÁJI KRISHNAVARMAN, the founder of the Herbert Spencer Lectureship at Oxford, proposes to found 6 Travelling Fellowships, Rs. 2,000 each, "for enabling Indian graduates, and, failing them, other qualified persons, to finish their education in England and to fit themselves for an independent profession." Five of them are to be called "The Herbert Spencer Indian Fellowships." Candidates to be eighteen years of age.

Each candidate "shall solemnly declare that, after his return to India, he shall not accept any post, office, emoluments, or service under the British Government; and shall enter into a written agreement to repay the Rs. 2,000 with interest at 4 per cent. within ten years—the repayments to form part of a fund for the endowment of additional Fellowships. If the scheme works well, Mr. Shyamáji will make a permanent endowment yielding the requisite sum."

* * *

MR. EDWARD WHITLEY, B.A. Trinity College, has given £1,000 towards the permanent endowment of the Chair of Physiology in the University of Oxford.

THE Fishmongers' Company have given £1,000 towards the funds necessary for the incorporation of University College in the University of London. £17,000 is still needed.

* * *

MRS. JAMES BARROW has given £10,000 to endow a Chair of French in Liverpool University in memory of her late husband.

* * *

AN anonymous local donor offers £10,000 to the Sheffield University Endowment Fund, provided four other equal sums are contributed. Alternatively, he will give £5,000, provided nine equal donations are promised. Under either condition, the sum necessary to complete the fund (£170,000) would be substantially provided.

* * *

AMONG the bequests of the late Mr. J. Holmes Lucking, Streatham, are £5,000 to Mansfield College, Oxford, and £1,000 to Hackney Theological College.

* * *

A COMMITTEE has been formed, with Lady Battersea (Surrey House, 7 Marble Arch, W.) as honorary secretary and treasurer, to found an annual prize, open to all students and members under six years' standing in the colleges for women connected with the Universities of Oxford and Cambridge, and Trinity College, Dublin, for the best essay on any subject—ethical, psychological, or philosophical—bearing on the evidence of natural religion.

* * *

THE Committee for the Promotion of Advanced Historical Teaching appeal for £250 a year for three years to develop their objects.

◆◆◆

Scholarships and Prizes. TRINITY COLLEGE, Cambridge, offers major scholarships (about nine), exhibitions (number not limited), and sizarships (number uncertain). Examination begins March 20.

* * *

DOWNING COLLEGE offers minor scholarships in Law, History, and Natural Science. Examination begins March 7.

* * *

SELWYN COLLEGE offers entrance scholarships and exhibitions for Mathematics, Classics, and Natural Science. Examination begins March 23.

◆◆◆

Appointments and Vacancies.

THE Hon. Maude Lawrence has been appointed to the new post of Chief Woman Inspector under the Board of Education.

Miss Lawrence was for many years Chairman of a Committee of Managers under the London School Board, and was a member of the Board 1899-1904, serving on the Committees for School Management, for Works, for Domestic Subjects, and for School Accommodation, being Chairman of the Special Schools Sub-Committee. In May, 1904, she was placed by the London County Council upon their Education Committee.

* * *

MR. A. L. SMITH, M.A., Fellow and Tutor in Modern History of Balliol College, has been appointed Ford's Lecturer in English History for 1905.

* * *

AT University College, London, Prof. F. T. Roberts has resigned his offices of Holme Professor of Medicine and Clinical Medicine and Physician to the Hospital; and Prof. L. F. Vernon Harcourt, the Professorship of Civil Engineering and Surveying; and

Dr. A. R. Cushing, of the University of Michigan, has been appointed Professor of Pharmacology and Materia Medica.

* * *

AT Birmingham University, Mr. R. P. Cowl, M.A., has

been appointed Special Lecturer in Middle English Language and Literature; and Dr. A. J. Ewart, Special Lecturer in Vegetable Physiology.

* * *

DR. JOHN MALCOLM, Lecturer on Chemical Physiology, Edinburgh University, has been appointed to the Chair of Physiology, Otago University.

* * *

FIVE Professorships are open at Rhodes University College, Grahamstown. Applications to be lodged by March 15. Particulars from the Agent General for the Cape of Good Hope, 100 Victoria Street, Westminster.

* * *

MR. JAMES C. IRVINE, Ph.D., D.Sc., has been appointed to the new Lectureship in Organic Chemistry in St. Andrews University.

* * *

MR. FABIAN WARE, Director of Education in the Transvaal, has been appointed editor of the *Morning Post*.

* * *

THE Senior Science Mastership at Watford Grammar School is vacant by the premature death of Ernest Crosland, B.Sc. Lond., who has held the post since 1896.

* * *

MR. JAMES A. SHAWYER, B.A. Oxon., has gone from St. Paul's School to Clifton College.

* * *

THE REV. JOHN A. C. LANE, M.A. Cantab., B.A. Lond., Senior Mathematical Master, Berkhamsted School, has been appointed Mathematical Master at Uppingham.

* * *

MR. JAMES H. HOWGATE, B.A. Lond., assistant master, Bakewell Grammar School, has been appointed Head Master of Huntingdon Grammar School.

* * *

MR. RALPH H. PINHORN, M.A. Oxon., assistant master and house master, Royal Masonic School, Bushey, has been appointed Head Master of the Free School, Penang.

* * *

MR. J. C. ENGLISH, M.A. Dubl., assistant master, Pontypridd County School, has been appointed Chief Modern Language Master, Bootle Municipal Intermediate School.

* * *

Literary Items. WE are very glad to learn that the Syndics of the Cambridge University Press have decided to publish a Mediæval History on the same general lines as "The Cambridge Modern History," on a plan in preparation by Prof. Bury—probably in six volumes, with maps and tables. The first volume will appear shortly after the completion of the "Modern History."

* * *

THE Oxford University Press promises immediately "Jowett's Translation of Aristotle's Politics," and two volumes of "Select Documents illustrative of the History of the French Revolution (May, 1789, to September, 1791)."

* * *

MESSRS. METHUEN announce a new and cheaper edition of Mr. L. T. Hobhouse's able work, "The Theory of Knowledge," and of the second volume of Prof. Oman's "History of the Art of War" (fourth to fourteenth century).

* * *

MR. FISHER UNWIN is including in his series of half-crown reprints of standard biographical and historical works "The First Two Centuries of Florentine History," by Prof. Villari. The book should be of special interest to students of Dante.

* * *

THE Walter Scott Publishing Company will shortly issue "Science and Hypothesis," a translation of a very important critical work by the famous French mathematician M.

Poincaré. Prof. Larmor, Secretary of the Royal Society, will furnish a preface.

* * *

A NEW Swedish-English Dictionary, by Walter E. Harlock, M.A., has just been published by Messrs. Norstedt & Sons, of Stockholm.

HENCEFORTH the administration of the Board General. of Education in respect of secondary schools under the Board's Regulations for Secondary Schools, as also of charitable trusts and endowments connected therewith, will be conducted in the Board's Offices at Whitehall, and not at South Kensington. The Board's administration under the Regulations for Evening Schools, Technical Institutions, and Schools of Art and Art Classes will remain, for the present, at South Kensington.

* * *

THE Board of Education have issued a circular to Local Education Authorities, again calling attention to the importance of the encouragement of thrift amongst school-children, and to the practical assistance given to this aim by the establishment of Penny Banks.

* * *

THE Board of Education has issued the Regulations for the Competition for Royal Exhibitions (Science), National Scholarships (Science), and Free Studentships (Science), 1905; and the Regulations for the Competitions for Royal Exhibitions (Art) and Local Scholarships (Art), and for National Scholarships (Art) and Free Studentships (Art), 1905. Also a new edition of the Regulations and Syllabus "for persons not being students in a Training College" for the Certificate Examination, 1905.

* * *

NOTTINGHAM CITY COUNCIL has adopted the report of the Estates Committee in favour of purchasing Mapperley Hall for £3,400, to serve as a hostel in connexion with the University College.

* * *

A LATIN address of congratulation was presented to Prof. J. E. B. Mayor on his eightieth birthday (January 28) by some 70 prominent residents of Cambridge University, Sir Richard Jebb, M.P., in the chair.

* * *

THE memorial tablet at Manchester University in commemoration of the educational services of the late Prof. Withers was unveiled in the Whitworth Hall (February 9) by Mr. P. A. Barnett, Mr. Withers's predecessor in the Principalship of the Borough Road Training College, Isleworth.

THE Regulations for the Cambridge Examinations for School Certificates and Army Leaving Certificates in the current year are now available.

THE SUNNY SIDE OF EGOTISM.

AN EXAMINATION OF THE EDUCATIONAL APPLICATIONS OF SELF-REFERENCE.

At the Monthly Meeting of the College of Preceptors on February 15, Mr. FRANCIS STORR in the chair, Prof. J. ADAMS, M.A., B.Sc., F.C.P., read a paper on "The Sunny Side of Egotism: an Examination of the Educational Applications of Self-reference."

THE YOUTHFUL EGOTIST.

There are few characters so little lovable and so little likely to have a sunny side as is that of the egotist. We are all unpleasantly familiar with him, but in ordinary experience he is always approached and estimated from the moral side. We regard egotism as a very disagreeable form of disease—in which view we are quite justified, so long as we keep to moral stand-

points and to mature human beings. For what is a disease among adults may be a natural and proper attitude of mind among children. In a certain sense, indeed, education may be said to consist in the working out of the egotism of youth; or, as it may be still better expressed, the changing of the character of the egotism which necessarily marks the immature mind, and cannot be eliminated even from the mature. In the earliest years egotism is not only justifiable; it is desirable. It is Nature's provision for the proper development of the individual consciousness. Even in youth and early manhood a certain amount of egotism, even of the objectionable kind, must be pardoned on account of its educational value—though it is well to keep it within bounds at this stage, and, if possible, to have it thoroughly under control before the young person reaches his majority.

THE ADULT EGOTIST.

In the case of the middle-aged, egotism, as usually understood, is a disease. The middle-aged egotist is really an example of arrested development; he is not quite grown up. We could all, I have no doubt, point to one or two at least among our circle of acquaintances who exemplify this stage of arrested development. To them the interesting thing in conversation is not the fact, but how the fact strikes *them*. The lowest kind of egotist can never get beyond this stage. If any remark is addressed to him, he simply takes out of it something that can be tacked on to his own experience, and proceeds to talk of that. A case in point:—A visitor made the statement, in connexion with a scheme in which he sought to interest the egotist: "The present success of our scheme is the result of nothing but the most dogged perseverance." To this, all the egotist found to reply was: "Our left-hand neighbour keeps a little yelping dog that is most annoying at nights." Egotists at this stage treat every remark merely as a suggestion to call up something in their own personal experience. Their minds are of that class known to psychologists as *associative*, and all their associations are self-referent. Among children, one of the most common causes of dispute is *which person saw it first*. The thing seen is regarded as of little importance; the essential point is—who saw it first? A rather useful test in determining who belong to the somewhat large class of adults who have not yet grown up is the interest they show in the question of who knew a particular thing first.

At a somewhat higher level is the egotist whose remarks are, indeed, generalized, but generalized immediately from the individual cases in his own experience. Every such general statement may be immediately translated into its concrete equivalent by any one who happens to be acquainted with the details of the egotist's affairs.

THE INTERESTING EGOTIST.

On the other hand, it cannot be denied that there are interesting egotists; but these are at their best in their books. There they have the matter all their own way, and can arrange their facts so as to be interesting both to themselves and to their readers. The world as seen from my standpoint may be quite interesting to other people; there may even be the added interest of its being my standpoint. But all this implies that the centre of interest for the time being is the personality of the individual speaking or writing. Authors like A. K. H. B. owe most of their charm to this personal interest. But it is quite a different thing when the centre of interest is in a subject. There the personal opinion of a speaker or writer has a strictly limited importance. It has its place in the whole view of the subject, but beyond that it must not go. If the only response one can get from another person is a reiteration of the particular associations in that person's mind, one gets bored with his facts and irritated with his personality.

THE PSYCHOLOGY OF EGOTISM.

From the psychological point of view, the development of the individual may be regarded as nothing more than the scientific training of egotism. Psychologically, the most unselfish, humble, and retiring of men is essentially an egotist. We are not to be misled by the evil repute of misdirected egotism. In order to become unselfish we must understand our own self—we must repress it in many ways—but we neither can nor ought to eliminate it. We are apt to overlook the fact that egotism is a necessity of our intellectual life. Whether he will or not, the human being must regard himself as the centre of the universe. He "can none other." The world is intelligible to him only in terms of his own states of consciousness. The individual is for

ever insulated, and by no possibility can he ever come into direct contact with his fellows. There is no such thing as interpenetration of consciousness; we can never be conscious of the consciousness of another. By a process of inference we are able to come to certain conclusions with regard to what is passing in the minds of our neighbours, but it must never be forgotten that this *is* a process of inference—an inference based upon the results of our own experience. Even the raw materials upon which this inference is based are obtainable only through our senses, and these senses are absolutely limited to the consciousness of the individual concerned.

However willing, therefore, we may be to regard matters from the point of view of another, we find it beyond our power to do this *directly*. It is true that we do seem to acquire the power of putting ourselves in the place of another; but all that this means is that we project our whole personality into the circumstances of another and try to realize how the world must look to him. This implies a very vigorous exercise of the imagination—so vigorous, indeed, as to prevent a very large number of otherwise estimable people from ever making the attempt. Fortunately, the effort required is less the more nearly our circumstances approach those of the persons whose point of view we wish to discover; so that, within certain narrow limits, it is quite possible for the ordinary individual to acquire a working knowledge of the view-points of his neighbours and associates. It requires special training or special endowments to extend the sphere of sympathetic comprehension far beyond the limitations of our own circle.

As a matter of fact, however, in ordinary life the egotist is blamed not so much for not knowing what his neighbour's point of view is as for not caring. It is not so much a matter of intellectual effort as of moral responsibility.

IS THE TEACHER AN EGOTIST?

By a strange perversion of the truth, it has come to be a popular belief that the teacher is a specially egotistical person. Now, if any of you have come here buoyed up by the hope that the sunny side of egotism is the teacher's side, it will be well to abandon that hope at once. Whoever is egotistical, it must not be the teacher. The schoolmaster of the popular imagination is, no doubt, a loud-talking, pompous, dogmatic man, pre-eminently sure of all his facts and deplorably self-referent. There are, it has to be admitted, schoolmasters of this stamp; but they are certainly not typical of the really successful teacher. If there is any need for a motto for teachers, it is impossible to find a better than the French *S'effacer*. The teacher who hopes to produce the best results on his pupils must begin by starting from the pupils' point of view. This does not, of course, mean that the teacher is to be a man of no character, but that he must know how to handle his own character so as to produce the best results on his pupils. The enthusiastic, but unthinking, teacher is very apt to assume that it is his place to mould the character of his pupils from without—to impress his own character upon them as a seal impresses itself upon wax. On the contrary, the influence upon character must work from within the pupil outwards.

MASTER AND PUPIL.

In manuals of school method there is frequently found a saying that is so generally accepted as to be regarded as axiomatic: "As is the master so is the school"—but this is not quite the same thing as to maintain: "As is the master so is the pupil." We are apt to think that, if we get a particularly fine character in a schoolmaster—"a man who could have been a Prime Minister"—the pupils will naturally resemble him. No doubt there is a strong tendency for the pupils to imitate the master, and in externals at least there is likely to be a considerable amount of resemblance between the two; but, important as it is, imitation is not the only force at work in the process of education. The teacher-character certainly reacts upon the pupil-character, and sometimes the result is that the pupil-character becomes the opposite to, or at any rate the counterpart of, the teacher-character. Remember what John Stuart Mill says about the influence of strong-willed parents on their children. Speaking from his own experience, he maintains that the exercise of parental will leaves no room for the development of the will of the child, and that strong-willed parents have weak-willed children. In the intercourse of life it is often found that the unselfishness of one person trains up another person in selfishness. It is sometimes said, for example, that the unselfishness of sisters has a great deal to do with the alleged selfishness of

brothers. "Active mothers make dolly daughters." Cromwell trained his Ironsides to resemble himself in many ways, but in some directions his training produced an attitude of mind that was opposed to, because complementary to, his own. The power of command on the one side, for example, was balanced by the facility of obedience on the other. The educator must try to discover the ideal character possible to each pupil, and so apply his forces as to produce that character. The educational principle underlying the contemptuous saying, "Don't do as I do: do as I tell you," has, at least, the saving grace of modesty. Were it of practical application, it would be one of the most valuable principles in the science of education. Unfortunately, the power of imitation is so great that the educator cannot divest himself of the responsibility involved in the mere process of living in constant contact with his pupils. He is a model to his class whether he will or not, and accordingly must walk circumspectly.

SELF-RESTRAINT OF THE TEACHER.

He must further modify his conduct so as to suppress certain of his tendencies that are harmless and even meritorious in themselves, but are unwholesome for his pupils. There is no real harm in being a fluent talker, for example; yet the educator must suppress this gift lest his pupils should not have sufficient opportunity for exercising theirs. These are instances of the cases in which the teacher's first duty is to efface himself. The man of vigorous personality and strong motor temperament is very apt to think that he is doing capital work when he is letting off his force in strenuous teaching, while, as a matter of fact, he is repressing the energies of his pupils, who ought to be doing their share, but are not permitted. Even intellectual work may be so conducted as to weaken where it should strengthen. Listen to this public eulogy of a distinguished American teacher: "His students had such implicit confidence in his knowledge and such reverence for his opinion that, after leaving him, they no longer cared to think for themselves. They were satisfied by conclusions reached by a mind so much superior to their own, possessing a grasp and insight which they realized was so far in advance of anything they could ever hope to attain." Meant as a panegyric, this is really an indictment of the teacher in question. It is a proclamation of disastrous professional failure. The very merits of the teacher may prove professional disqualifications. In the actual process of education what the teacher is or knows or does is of relatively small importance when compared with what the pupils think and do. In education the thing that matters is what the pupil thinks or does. We are too apt to forget that teaching and learning are correlative terms. However attractive the teacher may be, he cannot learn for his pupils, and, if they do not learn, his teaching has been in vain. It is not enough that the teacher teaches and the pupils learn. Unless the pupils learn *because of* the teaching, there has been no genuine teaching done. It is quite possible, and probably much more common than outsiders would imagine, that the teacher may go through a process that he calls teaching, and the pupils may go through a process that is really learning, and yet the two processes have no causal relation.

RESTRAINT OF THE YOUTHFUL "EGO."

In view of these considerations of the relation between the educator's qualities and those of the educated, it would almost seem as if the teacher ought to give full rein to his own egotism in order to repress that of his pupils. But we have seen that what is objectionable on the moral side and in adults may be laudable on the intellectual side and with children. The egotism of immaturity is a beneficial force acting in a natural way. It is the manifestation of the *ego's* efforts to discover its place in the world in which it finds itself. The *ego* can come to itself only by asserting itself against its surroundings. The sunnier side of egotism is shown in that process that the Froebelians call "making the inner outer." At the earlier stages the *ego* should rather be encouraged than repressed. To a later stage belong inhibition and the problems of the moral evaluation. Even at the earliest stages, however, there is no lack of correctives leading to the gradual development of the powers of inhibition. All the developing young *egos* have the same claim to free exercise; but the freedom of each is limited by the freedom of all the others. This restraint is as inevitable as it is wholesome. The private tutor, no doubt, has to introduce his own egotism, to some extent at least, as a restraining influence on that of his pupil; but in all probability the limitations of the pupil's equals is the best preparation for the limitations of adult life.

"THE MANAGING PERSON."

The insulation of consciousness, of which we have already spoken, is not infrequently regarded by the teacher as a serious drawback. He feels that, if he could only enter into the consciousness of his pupils, he would be able to modify their characters much more effectively than he can as a mere outside influence. He is right in his belief that he must work from within outwards, but he is mistaken when he believes that an actual mingling of consciousness would be an advantage. Archimedes, you remember, maintained that he could move the Earth if only he could find a fulcrum for his lever. What the Greek mechanic vainly longed for is within the reach of the teacher. If we seek to apply the lessons of psychology to the further development of our own character, we find that we are met by the great difficulties caused by the presence of that troublesome thing known as consciousness. We cannot take our own character in hand with any degree of satisfaction, because it is a matter of one part of ourselves turning back upon another part of ourselves, while both parts are conscious of the process. We can never escape from our own consciousness. If we could only step outside of ourselves, how much more powerfully could we influence ourselves! But in relation to our pupils this difficulty no longer appears. We are really in relation to our pupils in the position that Archimedes longed to be in with regard to the Earth. We stand quite clearly outside of the consciousness of the pupil, and have, therefore, a fulcrum on which to work our lever.

We are unable, indeed, to enter the consciousness of our pupil, but we are able from our own experience to form a pretty good idea of what is going on within the mind of that pupil. We have ourselves lived through the experience that he is now having. We have been in our time children. Partly then by introspective memory, and partly by careful external observation, we are able to come to certain conclusions with regard to the methods in which the child mind reacts upon certain stimuli. So that by acting towards the child in a given way we know that he will react in a way that we can calculate upon. The teacher, in fact, has to play the part that is not very popular in ordinary life, the part of "the managing person." Now it is well known that the "managing person" rather likes the egotist. In the art of managing people the first requisite is a clear knowledge of the way in which the managed person responds to stimulus. Now the egotist is pre-eminently a man of constant reactions. There is a uniformity about his way of thinking and acting that is very gratifying to the managing person. What clever people in society do for their own interest, and against the interest of the adult egotist, may be done in school by the teacher for the benefit of the immature egotist.

UTILIZE THE SELF-REFERENT TENDENCY.

The difference between childish and adult egotism may be represented by the difference between self-interest and interest in self. We are at all times no doubt interesting to ourselves, but in our earlier years this interest is more keen and vivid. As we advance in years the interest becomes dulled. We get to know ourselves too well: we realize our limitations. This is well seen in our attitude towards the characters in history and in fiction. The younger we are, the more inclined we find ourselves to throw ourselves into the personalities of those in the narrative who rouse our admiration. Mature people realize only too clearly the absurdity of putting themselves in the place of the distinguished persons of whom they read. To the young, on the other hand, all things seem possible. They refer all the incidents of their book to their own experience, and live over again in their own persons the lives that they admire. In the second book of the "Emile," Rousseau has a very striking passage dealing with this self-referent tendency in relation to the study of fables:

Observe children learning their fables, and you will see that, when they are in a position to apply them, they almost always do it in a way contrary to the intention of the author: and that instead of guarding themselves against the vice of which we wish to cure them, or from which we wish to protect them, they are inclined to love the vice by means of which one makes profit out of the failings of others. In the preceding [Fox and the Crow] fable children laugh at the crow, but they have all a warm side towards the fox. In the following fable you think you are giving them the grasshopper as an example: not at all, it is the ant they will choose. One does not like to eat humble pie: one will always play the grand part—it is the choice of self-love, a most natural choice. But what a ghastly lesson for childhood! The most hateful of all monsters would be a hard and miserly child, knowing what was asked of him, yet refusing. The ant does more: she teaches the child to mock while refusing.

Knowing this self-referent tendency, the teacher should always be ready to make use of it. It is quite a legitimate force to appeal to, and the matter can be so arranged that the effect the teacher desires can be readily obtained. The process, of course, is not by any means limited to moral instruction. Knowing that every new fact will be examined and tested by the law of all the previously acquired facts, the teacher can calculate with some degree of certainty on the way in which any new presentation will be received. That class of school joke known as the "howler" illustrates very clearly the connexion of self-reference to intellectual processes. Every example of this form of blunder can be resolved into a case of the treating of new matter in the light of the matter already acquired by the pupil-*ego*. For it must not be forgotten that the development of the *ego* takes the form of building up a series of elements related to one another in such a way as to form a harmonious whole. Whatever view we may take of the origin of knowledge, or of the nature of the *ego* in itself, it has to be admitted that in some form or other the nurture of the *ego* must be recognized as well as its nature. The acquiring of experience is really the acquiring of matter upon which the *ego* is exercised. It is necessary to avoid the unscientific separation of the mind from the contents of the mind. They are really one and the same, though each is viewed from a different aspect. The *ego* really falls upon the outer world and assimilates as much of that world as its nature will allow. The matter thus assimilated does not remain as something apart from the mind, but is incorporated with it. In Herbert Spencer's happy phrase: "Fact has become Faculty." The wider the range of facts that are thus assimilated, the less the tendency to egotism on its objectionable side. This does not, of course, mean that your man of high culture and wide interests is free from selfishness, but selfishness is not quite the same thing as egotism. Many of your literary and artistic dilettantes are selfish enough in all conscience, and yet they are not egotists of the dull and uninteresting type. The many-sided interest of the Herbartian theory is the cure for the aggressive, and, at the same time, dull, egotism that is so irritating in ordinary life.

HOW TO OVERCOME EGOTISM.

It may be not unfairly said that the proper way to overcome egotism is by cultivating egotism—a sort of psychological homœopathy. In a certain sense, the development of the individual consciousness may be said to be the extending of the borders of the *ego* in such a way as to enable it to take all knowledge to be its province. At the earliest stages the *ego* may be regarded as mainly subjective. Having no content, it can have only the meaning that it derives from its own nature. By the mere process of living the *ego* acquires content, is brought more directly into relation with the outer world, makes itself (to a certain extent) master of a great deal of that outer world, and in this way greatly enlarges the area within which it can act. In the Herbartian psychology of the will we have, you may remember, the subjective and the objective elements. At a certain stage in the course of development the will becomes, as it were, conscious of itself, and finds that its previous actions now become the subject of its own activity. The will is, as it were, turned inwards upon itself, and that aspect of the will which deals with its previous history may be called the subjective aspect—the previous history itself forming the objective. This clearly corresponds to what is usually spoken of in the idealist philosophy as the coming to self-consciousness—a phenomenon that is sometimes called intellectual conversion. Just as the Idealists extend the figure beyond the range of the mere will, so we may extend the range to include the whole of that mental activity which corresponds to the *ego*.

At the earliest stages the *ego* is very active and aggressive, while it has comparatively few points of contact with other *egos*. As it acquires content it touches other *egos* at an increasing number of points, and as a consequence more frequently acts in conjunction with those *egos*, and thus its general attitude of antagonism to those other *egos* disappears. The person is as egotistical as ever, but the *ego* is a wider *ego*—an *ego* that includes a greater range of interests. So wide, indeed, does the fully developed *ego* become that in many respects it is indistinguishable from the *alter ego* against which it reacts. The elements common to the two *egos* are so numerous that there seems to be rather fusion than opposition between them. It has to be admitted, of course, that, however wide the range within which the *ego* works, it still is confined to its own zone of influence; it can never pass beyond itself—

Dich kannst du nicht entfliehen.

But the disagreeable element can be, to a great extent, eliminated by the wider culture that education and life can supply. Egotism ceases to be disagreeable when it takes full account of, and absorbs, the egotisms with which it is brought into contact.

Mr. ORCHARD said that one of the most important points raised by the lecturer was that of making the pupil think and act for himself. In order to do this it was necessary to have an insight into the secret springs of the pupil's mind and to teach accordingly. The remembrance of one's own difficulties in learning was no doubt a help, but the teacher must remember that minds differed, and should be careful not to read the ideas and experience of the adult into the ideas and experience of the child.

Mr. RICHARDS agreed with the lecturer that it was better that the child's egotism should be modified by the natural action of the egotism of his schoolfellows than that it should be forcibly controlled by the teacher. At the same time the teacher's ordinary conduct, like that of other adults with whom the child came into contact, might justly come into play as a modifying influence, and might be beneficial.

The CHAIRMAN thought the moral of the lecture was that teachers should do more to encourage egotism, which had been shown to be an admirable quality, not only in the young, but also conditionally in adults. The general tendency of school life, especially in modern schools, was to suppress egotism, and, although collectivism, which might be regarded as an enlarged egotism, was fostered, individual tasks and pursuits received little encouragement. It was significant that schools in which the teaching and discipline were not of a high order, and in which individuality was allowed free play, produced a disproportionate number of original characters and men of mark. He ventured to question the wisdom of the motto, "S'effacer, s'éblottir." This attitude had certainly not been characteristic of the teaching of the best masters he had known. On the contrary, they had been men of strong personality. He was of opinion that the most successful teachers had been men who intellectually were in the second rank. Geniuses had been distinct failures as teachers for the reason that the distance between them and their pupils was too great.

Prof. ADAMS having replied to the various speakers, a vote of thanks to the lecturer concluded the proceedings.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on February 18. Present: Dr. Wormell, Vice-President, in the Chair; Prof. Adams, Mr. Barlet, Rev. Canon Bell, Rev. J. O. Bevan, Rev. A. W. Boulden, Mr. E. A. Butler, Mr. Charles, Mr. Eve, Mr. Hawe, Miss Jebb, Miss Lawford, Rev. R. Lee, Mr. Millar Inglis, Mr. Morgan, Mr. Pinches, Miss Punnett, Mr. Rule, Rev. Dr. Scott, Mr. Starbuck, Mr. Storr, and Mr. Vincent.

The minutes of the last meeting were read and confirmed.

The Secretary reported an increase in the number of entries for the Professional Preliminary Examination to take place on March 7-9.

Diplomas were granted to the successful candidates at the Christmas Examination of Teachers. (See list, page 152.) The Diploma of Licentiate was also granted to the Rev. F. G. Powell, who had completed his examination. The Prize of £5 for Mathematics was awarded to Mr. G. F. T. Phillips, and the Prize of £5 for Natural Sciences to Mr. G. H. Green.

The Council received with deep regret the announcement of the death of one of their members, the Rev. Dr. Hiron.

The Report of the Finance Committee was adopted.

Dr. R. Wormell was elected President of the Council, and Sir Philip Magnus, Mr. E. A. Butler, and the Rev. Canon Bell, Vice-Presidents. Mr. H. W. Eve was re-elected Dean, and Mr. E. E. Pinches Treasurer of the College.

The following persons were elected members of the College:—

Mr. W. H. Allen, Leicester House School, Carshalton.

Miss E. Eales, The Red Cottage, Bexhill-on-Sea.

Miss A. F. Partington, A.C.P., Rhampore House School, Wembley, Middlesex.

Mr. C. E. Williams, M.A. Camb., 15 Ranelagh Avenue, Barnes, S.W.

The following books have been presented to the library since the last meeting of the Council:—

By the AUTHORS.—Allchin's Account of the Reconstruction of the University of London; Aveling's Who was Jesus Christ?; Breul's Greek and its Humanistic Alternatives in the "Little-Go"; Hall's Practical Projection; Marks's Principles of Planning; Miss Stevens's Education among the Mahomedans in the Middle Ages.

By E. ARNOLD.—Wolff's Les Français du dix-huitième Siècle.

By G. BELL & SONS.—Baker and Bourne's Elementary Algebra; Bell's York Readers, Book I.; Candler's Paraphrase of Poetry; Pendlebury's Arithmetical Scheme B Test Cards, Standards V. and VI.

By A. & C. BLACK.—Black's Elementary Geography Reader, No. Vc. (The Americas); Ellery's Council Arithmetic, Parts I., II., and IV.

By BLACKIE & SON.—Blackie's Coloured Picture Story Readers for Infants

(6 Parts); Recitations for Infant Schools, Books I.-V.; German Poems for Recitation; Book of German Songs; Selections from Henry IV.; Survey of the British Empire; British History in Periods, Books IV. and V.; Complete History Readers, Nos. I. and II.; Decimals and the Metric System; The Teacher's Black-board Arithmetic, Part I.; Handy Book of Logarithms; Aytoun's Edinburgh after Flodden; Baker's Lamartine's Graziella; Bedford's Sainte-Beuve's Portrait of Molière; Blakeney's Eight Essays of Bacon; Brandin and Hartog's Book of French Prosody; Brighouse's Philippics of Cicero, V.-VII.; Brown's French Composition by Imitation; Chayton's Schiller's Der Nefte als Onkel; Conway's Cicero's De Amicitia; Cotterill's Quintus Curtius Rufus, Book IX., 1-5; Mrs. D'Arcy Collyer's Scenes from Molière's Les Fâcheux; Defoe's Journal of the Plague; Dickens's Christmas Carol; Edmonds and Austen's Characters of Theophrastus; Frazer's Dumas's Jacomo; Grose and Webber's Practice in Conversational French; Hall's Hertfordshire; a Realising Book of the County; Hartog's Selections from Madame de Staël, and Labiche's La Poudre aux Yeux; C. Hawkins's Elementary Geometry, Parts I. and II.; Richard Hawkins's Voyage into the South Sea; Heath's German Strong Verbs; Hill's Rapid Revision Exercises in French Syntax; Washington Irving's Companions of Columbus; Kerr's Constructive Geometry (First Year); Layng's Selections from Longfellow; Leask's Scott's Kenilworth; Le François Laboulaye's Le Château de la Vie; M'Dougall's Landmarks of European History; Meyer's Conversational German Grammar (First Year); Moorman's Shakespeare's Henry IV., Part I.; Morgan's Exercises in Theoretical and Practical Geometry; Nall's Xenophon's Anabasis, IV.; Nicol's Brush-Drawing Cards, Sets I.-III.; Perman's English Passages for French Prose, and Michelet's Jeanne d'Arc; Phillips's Milton's Comus; Preston's Angier and Sandeau's La Pierre de Touche; Prior's de Musset's Fantasio; Rankin's Science of Laundry Work; Roberts's Preliminary Geometry, and New Geometry for Beginners; Schilling's Scenes from Goethe's Hermann und Dorothea; Tate's Euripides' Alcestis; Timpany's Arithmetic of Physics and Chemistry; Turnbull's Elementary Plane Geometry; Warner's Geography of British South Africa; Weckley's Exercises on the French Subjunctive; Wells's Cicero de Senectute, and Ovid's Tristia, Book I.; Winbolt's English Poetry for the Young; Wolff's Français pour les Commencants, and Teacher's Hand-book to the same; Wynne-Willson's Hand-book of French Dictation; Yorke's Note-book of French Literature, Vol. II.

By W. B. CLIVE.—The University Correspondent, 1904; Matriculation Directory, Jan. 1905.

By GINN & Co.—Allen's Goethe's Hermann und Dorothea; Beckmann's Storm's In St. Jürgen; Gregor's Freytag's Die Journalisten.

REVIEWS.

SOCIOLOGY.

Sociological Papers. By Francis Galton, E. Westermarck, P. Geddes, E. Durkheim, Harold H. Manu, and V. V. Branford. (10s. 6d. Macmillan.)

Here is the first volume of the proceedings of the Sociological Society, consisting principally of the papers read in its first session during the spring and summer of last year, together with a report of the discussions upon some of them. Prof. Karl Pearson's doubts as to the power of the Society to do effective work without the initiative of some one great thinker capable of setting bounds to the science and prescribing its functions may wait the solution of experience; and, as the Society goes on its way meantime, we need not now consider closely Mr. Branford's polemic against him. Mr. Bryce, the President, who gave an introductory address on "The Use and Purpose of a Sociological Society," kept to very general terms and shrank both from defining Sociology and from describing "the full scope" of the Society. He thought, however, that such a Society was needed for a variety of useful purposes: to "survey with the eye of science the whole field of human activity," and so to orient and give a hand to incipient branches of social study (say Eugenics); to co-ordinate in profitable relations special developed departments of the so-called social sciences; to develop more creditably the theoretical side of systematic inquiry into the sciences connected with human progress; to urge better provision for the teaching of the theory of all branches of social inquiry, and the multiplication and organization of bibliographical resources; and, in general, to endeavour to interpenetrate every department of human investigation with the scientific idea. The field is ample, if the boundaries be somewhat shadowy. Mr. Branford, again, set forth the business of Sociology, and thereby, presumably, the scope of the activities of the Sociological Society. Thus:

Let us assume that the professed Sociologist—whether or not he be a sectional investigator—yet, as Sociologist, is faithful to the general conception of the science and seeks some higher ultra-sectional standpoint from which all available knowledge of Man and his action and reaction with environment may be drawn together and focussed for two purposes. The first of these two purposes is a speculative one—the understanding and interpreting of that unfolding process or drama of social evolution in which we are all interested as spectators and as participants. The second purpose is practical—the utilization of our

knowledge, gathered and unified from its manifold sources, for the directing, as far as may be, and in part controlling, of this evolutionary process. The first task of Sociology—as pure science—is thus the deliberate, systematic, and ever-continuing attempt to construct a more and more fully reasoned social theory—a theory of the origin and growth, of the structures and functions, of the ideals and destiny of human society. The second task of Sociology—applied science—is the construction of principles applicable to the ordering of social life, in so far as concrete problems can be shown to come within the range of verifiable knowledge.

An elevated and laudable aspiration; but, after all, that sceptical warning of Prof. Karl Pearson's will persist in ringing in one's ears.

At the same time, the Society will be doing good work in compiling, sifting, and co-ordinating materials, and in formulating such laws or rules as may seem to emerge in the course of their studies. At first, naturally, each ardent member will push his own subjects and views, and it may not appear easy to discern any particular general trend in the business; but eventually some definite co-ordination is bound to manifest itself. The editors usefully group for us the contents of the papers now issued. "The History and Methodology of Sociology" is represented by the papers of Prof. Durkheim and Mr. Branford; "Pioneer Researches in Borderland Problems," by the papers of Dr. Westermarck (on the position of woman in early civilization) and Mr. Mann (on life in an agricultural village in England); and "Applied Sociology," by Mr. Francis Galton's paper on "Eugenics" and Prof. Geddes's paper on "Civics." It may be said that all this is but analogous to the transfer of the proceedings of the Social Science Section of the British Association to another venue. It may be said that some haze hangs over one paper, and that the matter of another is substantially available elsewhere. Let us gratefully accept the present collection as at least convenient and stimulative; and we ought not to forget to note the special value of the appended discussions, oral and written. The utility of the Society for the furtherance of social inquiry, one way or another, cannot be doubted; and the more it keeps in view its high ideals the more likely it is to produce effective results. We wish it the fullest success. The present volume is handsomely printed and most pleasant to read. It should be widely perused and considered.

THE ENGLISHMAN'S BURDENS.

(1) *Labour Legislation, Labour Movements, and Labour Leaders.* By George Howell, F.S.S., ex-M.P. In two volumes. (3s. 6d. each. Fisher Unwin.)

(2) *The Burden of Armaments: a Plea for Retrenchment.* By the Cobden Club. (3s. 6d. Fisher Unwin.)

(1). Mr. Howell's book is a second edition, the first having been issued some three years back; but the changes are of no great moment, owing to the scrupulous accuracy of the original edition. The work "is an attempt to trace progressive legislation from the date of the first repeal of the Combination Laws in 1824 to the present time," with a preliminary account of "the nature of the laws adverse to labour as they existed at the close of the eighteenth century and during the first quarter of the nineteenth century." It is unquestionably, as it was meant to be, "a truthful record in the realm of industrial history," and consequently it is a very valuable companion to the ordinary political histories of the period, illustrating most important movements that do not usually figure in brief historical summaries in proportion to their intrinsic significance. There are early episodes of a spirit that people nowadays will have difficulty in understanding, and will scarcely read without indignation. There are later episodes marked by perversity of intelligence rather than by truculent feeling. But in no case does Mr. Howell permit himself to deviate from the sober and calm temper of the historian, nor in exciting events where he personally took a leading part does he anywhere overstep the bounds of a proper modesty. The volumes are most instructive—an historically valuable record; and, while they will, of course, be primarily interesting to the labouring classes, they are none the less important to all that wish to understand in reasonable fullness the social and political developments of the past century in the sphere of labour in England.

(2) The Cobden Club's "plea for retrenchment" has been prepared by a committee consisting of Mr. Shaw-Lefevre as Chairman, Lord Welby, Sir Algernon West, Sir Spencer Walpole, and half a dozen other economic specialists. The first part is a condensed restatement, with elucidations, of Cobden's argu-

ments in "The Three Panics," exposing the senseless and expensive scares of the twenty years preceding 1863. The second part deals with the economic reaction from 1863 to 1884, when successive Governments, irrespective of party, vied with each other in husbanding the resources of the country, in remitting taxation, and in reducing debt, so as to leave as much money as possible to fructify in the hands of the people. The third part gives "an account of the gradual, and of late years speedy, relapse into extravagances which have deprived us of many of the advantages of peace." Finally, there is the question how it may be possible to reduce the enormously increased expenditure, and to "return at least to the point at which it stood, and was considered amply sufficient, immediately before the late war in South Africa." The exposition is perfectly sober and business-like, and the facts are scarcely open to dispute. Everything, or nearly everything, in the long run turns upon questions of policy. Anyhow, it is clear enough that the huge burden of military and naval expenditure requires ruthless examination. It almost doubled in the fifteen years from 1884 to 1899, and now it is all but threefold the amount of 1884. The figures are:—1884, £27,979,000; 1894, £37,326,000; 1899, £40,897,000 (not including the expenditure on the war in South Africa incurred later in 1899); 1904, £76,367,000. The increase of pressure is serious; it means a corresponding drag on the peaceful industries and social betterment. The case is very ably and temperately presented from the point of view of the Cobden Club. No doubt the other side will join issue. In any case, the raising of the question in explicit and detailed form cannot but be reckoned a public service.

QUADRATIC PARTITIONS.

Quadratic Partitions. By Lieut.-Colonel Allan Cunningham, R.E. (12s. net. Francis Hodgson.)

By the publication of Cunningham's tables, mathematicians obtain access to the results of investigations extending over several years. In certain respects the new volume may be regarded as a companion to a work on residues entitled "A Binary Canon," and produced some years since by the same author. As in the case of its predecessor, the circulation of the present work will necessarily be limited; but investigators in the field of the theory of numbers will at once recognize its value as a book of reference. Colonel Cunningham has greatly added to the results previously published in connexion with this subject. The arrangement of his tables is excellent, presenting in clear and compact form, and in successive columns, the *prime* numbers p , the *prime* factors of the immediately preceding integers, and the *quadratic* parts of each prime when considered in its relation to various important types of quadratic partitions. In his main table the author deals with nine such types. For four of them he has extended his researches to all primes $\geq 100,000$; in the case of a fifth the limit reached is $p \geq 25,000$; whilst in the remaining four $p \geq 10,000$ gives the range of investigation. The main table is followed by shorter ones devoted to quadratic partitions of other special types, and the reader is referred to the author's introduction to his work for details as to the nature of each. It will be seen from the above that the present tables leave far behind those compiled by earlier mathematicians pursuing the same subject. Colonel Cunningham states, however, that he has taken advantage of the work already accomplished by Barlow, Jacobi, Reuschle, and others, incorporating in his own compilation results due to some, and employing those obtained by others to aid him in the task of checking the accuracy of the calculations. He has been enabled in the course of preparing his own work to correct many errors which had crept into the older tables. We must not be understood to underrate in any way the importance of Colonel Cunningham's achievement when we say that obviously the materials which he found ready to his hand helped to prepare the way for his more extended inquiry.

Besides those already mentioned, the new volume includes *Pellian* tables furnishing the solutions of several fundamental *Pellian* equations, and a study of these will show that in this direction also the author has contributed a large number of fresh results. The introduction to the work gives much useful information touching the volume, and considers briefly some of the leading properties of quadratic forms. Though limiting as far as possible his discussion of the theory, the author gives all that he deems requisite in order that his tables may be readily consulted. While it was still far from complete, Colonel Cunningham's work was recognized as one of great worth by the

Mathematical and Physical Section of the British Association, and how favourably it was received by the Royal Society may be judged from the fact that the expense of its preparation and publication has been in part defrayed by grants from funds at the disposal of that body. Any notice of this very valuable work would be incomplete without some reference to the great care which has so evidently been bestowed on it in order to ensure accuracy. Not a single error revealed itself as the result of a series of tests, primes being taken at random from various parts of the volume for the purpose of verifying the computations to which each prime in turn gave rise.

A LITERARY AND HISTORICAL MISCELLANY.

An English Garner. In 12 vols. 4s. net each. (Constable.)

Messrs. Constable deserve the lively gratitude of all students that work in the Tudor and Stuart periods of English history and literature by this scholarly and handsome publication. From time to time we have briefly noticed the volumes as they were issued in pairs, and recently the whole series has been completed by a couple of volumes of "Elizabethan Sonnets," with an elaborate and illuminating introduction by Mr. Sidney Lee. The texts have been reprinted, with very slight alterations, from the well known and highly appreciated "English Garner" issued in eight volumes between 1877 and 1900 by Prof. Arber, who carefully collated his texts with the originals. The old spelling has been modernized, so that general readers will not be deterred from perusal of the vast and varied mass of prose and verse illustrative of the times, much of which makes curious and entertaining reading, apart altogether from its historical or literary value. The original "Garner," however, is not simply reprinted—the materials have been rearranged and, for the first time, classified under the general editorial supervision of Mr. Thomas Seecombe, whose good work in Elizabethan literature we have had occasion to applaud in connexion with Messrs. George Bell & Sons' "Handbooks of English Literature" (February, 1904), and additional fresh matter has been inserted in order to supply a more continuous representation. A specially valuable feature of the new edition is the series of "Introductions," all of which have been written by recognized specialists, and will be exceedingly helpful to students of the various volumes.

HISTORICAL METHOD IN MECHANICS.

Mechanics. By John Cox, M.A., F.R.S.C., LL.D., Macdonald Professor of Physics in McGill University, Montreal. (9s. net. Cambridge University Press.—Cambridge Physical Series.)

There is much truth, we suspect, in the allegation that, though the principles of mechanics are the simplest and the earliest to be discovered in the whole range of science—and, moreover, are directly illustrated in almost every act of our lives—"more difficulty is found in giving beginners a real grip of them than with any other branch of physics." Why should this be the case? Prof. Cox attributes it largely to the ordinary text-book methods of treatment. His own experience led him to break away from the traditional system, and to recast the subject in his own mind; and now he presents it in its historical development, following the path struck out by Prof. Mach in his "Die Mechanik in ihre Entwicklung." The historical exposition certainly invests the subject with special interest; the gradual unfolding of the progress of discovery introduces a personal element of powerful attraction, and emphasizes practical applications. Prof. Cox has his eye specially upon mechanical principles, avoiding merely mathematical difficulties so far as that is fairly possible; he "starts from real problems, as the subject started, showing how the great investigators attacked these problems, and introducing the leading concepts only as they arise necessarily and naturally in the course of solving them"; he "brings out incidentally the points of philosophic interest and the methods of science"; he appeals constantly to experiment for verification, "leading up to an experimental course limited to the most important practical applications," and eventually embodying a good deal of matter not usually found in the elementary text-books; and he adds limited sets of carefully selected examples for exercise. Students that will not learn mechanics from this work, and be fired with interest in the subject, must be hopeless. Students that must work through an ordinary text-book for examinational or other reasons ought to have this volume by their side for its interest and stimulus, and for its fruitful co-ordination of theory and practice.

SIR HUDIBRAS.

Hudibras. By Samuel Butler. The Text edited by A. R. Waller. (4s. 6d. net. Cambridge University Press. Cambridge English Classics.)

The basis of the present edition of Parts I. and II. is the issue of the year 1678, the first editions of these Parts not containing either the "Annotations" or "An Heroical Epistle of Hudibras to Sidrophel," and both Parts having been "corrected and amended, with several additions and annotations," in 1674. The Third Part is taken from a copy of 1679, itself a reprint of the original issue of 1768. The variations between the issues now followed and the first editions are given in the Appendix: they are interesting in a literary point of view rather than essentially important. In his prefatory "Note" Mr. Waller furnishes useful hints to collectors on the spurious or pirated issues, and indicates collateral sources of information on various editions, &c. The editorial method is the same as in the previous volumes of the series: the original text is reproduced with all its inconsistencies of spelling and eccentricities of pointing, excepting only evident misprints in punctuation, which are registered in appendix. This, as the editor says, "gives to the general reader an added sense of nearness to the actual form in which the author made his appearance," and it occasions no difficulty to the intelligent student. The form is convenient and the get-up is agreeable and substantial.

GENERAL NOTICES.

CLASSICS.

Florilegium Tironis Graecum. By Ronald M. Burrows, Professor of Greek in University College, Cardiff, and W. C. Flamstead Walters, Professor of Classical Literature in King's College, London. (4s. 6d. Macmillan.)

An attractive volume of over 400 "simple passages for Greek Unseen Translation, chosen with a view to their literary interest," so as to widen the range of the reading of the average boy or man, and to exercise his taste and appreciation. The passages are fairly characteristic of the great writers—Homer, Aeschylus, Sophocles, Euripides, and Aristophanes in poetry; and Herodotus, Thucydides, Xenophon, Plato, Demosthenes, Aeschines, and Lucian in prose—although the proportions of space assigned to each writer may easily enough be disputed. The editors have not hesitated to adapt the originals to their purpose, omitting lines and phrases, simplifying slightly (as an alternative to omission), and generally avoiding difficulties and irregularities. Such concessions would be a small price to pay for the attraction of readers to a wider field than the ordinary college or pass university course affords. The experiment is at once bold and interesting, and, if it do not succeed, the fault will not lie with the editors, who have performed with great discrimination a task that is really very much more difficult than it looks.

Horace. Vol. I.: *The Odes, Carmen Saeculare, and Epodes*. With a Commentary. By E. C. Wickham, D.D. (6s. Clarendon Press.)

Some months back we noticed the second volume of Dean Wickham's most careful and scholarly work. While following the lines of the school edition of 1891, the present edition brings the notes into substantial harmony with the later octavo edition. The general introduction deals adequately with the text (MSS., scholiasts, and editions), and summarizes what is known of Horace from his own works or from other sources. The notes are very full and helpful, and suggestive even if not in all cases convincing. An appendix deals with metres and other special matters. Altogether an excellent edition, beautifully got up and convenient in form.

A Second Latin Course. By E. H. Scott, B.A., and Frank Jones, B.A. (2s. 6d. Blackie.)

The materials for Part I.—Caesar's account of the Helvetian War (B.G. I. 1-29)—are worked up in three separate versions of increasing difficulty (*praeparatio, lectio*, and Caesar's own words); and intermixed are grammatical exercises leading to "a gradual assimilation of inflectional forms in a systematic manner." Part II. consists of exercises on various inflectional forms, mainly supplementary to the preceding. Parts III. and IV. provide miscellaneous passages for translation and composition. Part V. gives Caesar's text, vocabularies, and a great variety of helpful apparatus. The work has been well planned and very assiduously worked out. There is plenty of room for the exercise of judgment on the part of the teacher, so as not to overwhelm the pupils with details. Judiciously used, the book ought to be interesting as well as effective.

MATHEMATICS.

Geometry on Modern Lines. By E. S. Boulton, M.A. (2s. Methuen.)

The volume deals principally with the demonstration of theorems, the corresponding constructional course being evidently assumed as

taken in advance. In some respects the book is really good. Thus, for example, the plan of proving many of the propositions first practically and immediately afterwards by theoretical methods is one that will recommend itself to teachers; and, again, the author's explanation of parallelism is superior to that found in many of the modern text-books. In certain essentials, however, the work is far from satisfactory. Naturally we must suppose that it is to be regarded as a class-book, and not merely as a teachers' manual. On the basis of this assumption, the frequent introduction into the text of what are little more than skeleton proofs is to be deplored; the average pupil will not stay to clothe the skeleton, although the teacher may subconsciously fill in the details of the argument for himself, and would, it is to be hoped, supply to and require from his class the *why* and the *wherefore* of every step. There were many evils, doubtless, in the old system of teaching, which reckoned among its requirements the citing of references as well as the furnishing of a reason for every statement; yet this was far preferable to any tendency to dispense with both, and, after all, we are disposed to claim that there was a certain value in knowing just where to find the authoritative justification of an assertion. The constant repetition of the *why* and the *wherefore* plays an important part both in strengthening the individual argument and in producing familiarity with principles of wide application. In the present volume, too, much of the text which discusses the rudiments of trigonometry is imperfect, and would gain very considerably if entirely re-written. In conclusion, it would appear to the reader that these and other unsatisfactory features are due in no small degree to an attempt to deal with a range of theory too wide to be considered within the prescribed limits of the work. This, we may note, is a fruitful source of danger to the writers on elementary mathematics at the present time.

Worked Problems in Higher Arithmetic. By W. P. Workman, M.A., B.Sc., and R. H. Chope, B.A. (2s. Clive.)

A large and varied collection of difficult problems, many of which are derived from sources of the highest authority. The full solutions are furnished, and the results appear to be, in general, thoroughly reliable. A considerable proportion of the questions—more especially, perhaps, those of a practical nature—will be acceptable to students preparing for advanced examinations; others may be regarded as arithmetical curiosities and puzzles; whilst there is still a third class, consisting of problems which are above the level and beyond the requirements even of the advanced general student, but which will attract the specialist in higher arithmetic, affording him interesting material for original work, and at the same time providing him with the means of comparing individual methods and results with those of the published solutions.

Studies in Graphic Arithmetic. By Rev. J. Lightfoot, M.A., D.Sc. (1s. 6d. net. Normal Press.)

The advantages of graphical methods for the solution of many arithmetical problems are well illustrated by the series of interesting worked examples of which this small volume mainly consists. Students will find it a valuable and helpful little book. The matter contained in it is worthy of being brought out in a more finished form.

The January issue of *L'Enseignement Mathématique* opens with an appreciative biographical sketch of the late Prof. P. G. Tait by Dr. J. S. Mackay.

SCIENCE.

The Analytical Theory of Light. By James Walker, M.A., Demonstrator of Physics in the Clarendon Laboratory, Oxford. (Cambridge University Press.)

A spacious work signally creditable to both the Universities participating in its production. Mr. Walker's object is "to give an account of physical optics without having recourse to any hypothesis regarding the nature of the influence that constitutes light, or the character of the medium in which it is propagated." A few simple experimental facts show that "a stream of light may be represented by a periodically varying vector transverse to the direction of the beam," and on this result Mr. Walker bases his treatment of the subject, appealing to experimental methods and results only in case of necessity. The historical method lends fresh interest to the study, and forms a valuable preparative for further progress towards a conclusive solution of the theoretical problem, and for the deeper investigation of higher optics. The work is fluently and clearly written, with ample command of the literature of the subject, and with very competent technical ability.

Animals, Our Country's, and how to know them. By W. J. Gordon. (6s. Simpkin, Marshall, & Co. Our Country's Series.)

The book is "a guide to the Mammals, Reptiles, and Amphibians of Great Britain," on the same plan as the former four volumes of the series, with 33 full-page coloured plates and 43 original diagrams, by R. E. Holding, all effectively reproduced. The object is "the easy identification of our native species by means mainly of external characters and concise descriptions of such habits and peculiarities as help in distinguishing them." The descriptive matter is well selected and forcibly presented, and the application of it to "identification" is

specially businesslike and vivid. A glossary of technical terms is appended. A very instructive and attractive volume.

The New Matriculation Chemistry, by G. H. Bailey, D.Sc. (Lond.), Ph.D. (Hcid.), appears in second edition (third impression) rewritten and enlarged, under the editorship of Dr. Briggs (4s., Clive). The experimental treatment is developed still further, an Introductory Course being specially planned as a training in method. The work is specially adapted to the London University Matriculation syllabus. It well deserves its popularity.—*Building Construction (First Stage)*, by Brysson Cunningham, B.E., A.M.I.C.E. (2s. 6d., Clive), also appears in a second edition, revised and enlarged. It is systematic and practical, with 554 figures—an excellent guide to the South Kensington examinations.

A carefully revised edition of the *Physical Laboratory Manual*, by H. N. Chute, M.S., in "Heath's Modern Science Series," deserves attention (2s. 6d.). The explanations and directions are lucid; all the problems have been rewritten from experience; the tables of constants have been extended; a short table of logarithms has been added; and there are 117 illustrations.

A new and revised edition of *Elementary Biology (Nature Knowledge)*, by J. H. Wimms, B.A. (2s. 6d. net), has been issued by the Normal Press—simple, clear, and practical, with 192 illustrations.

A "popular edition" of *Astronomy for General Readers*, by George F. Chambers, F.R.A.S. (1s. net, Whittaker), will be cordially welcomed. It is attractively written, as well as scientifically sound, and it is well calculated to stimulate a taste for the subject.

MODERN LANGUAGES.

A Book of French Prosody, with Specimens of French Verse from the Twelfth Century to the Present Day. By Louis M. Brandin, L.-ès-L., Ph.D., Fielden Professor of French and Professor of Romance Philology at University College, London; and W. G. Hartog, B.A. (Lond.), Lecturer in French at University College, London. (3s. 6d. Blackie.)

The book is primarily intended as a text-book for advanced students of French, but "it is addressed also to the larger public of those who take an interest in reading the French poets"—"to train the reader's ear and to quicken his powers of observation." In Part I. of the Prosody exposition, the authors deal with the phonetics of French verse, caesura and enjambement, hiatus, assonance and rhyme, alliteration, and poetical peculiarities of orthography and syntax. The explanation is considerably detailed, amply illustrated, and often illuminated by indication of historical stages of development. The only difficulty for most students will be met in the treatment of the caesura: the attitude of the authors might have been more detached, and the expression sometimes more precise or more full. Part II. illustrates and explains the specialties of the various forms of verse: *vers libres*, strophes, stanzas, couplets, *terza-rima*, *villanelle*, *rondel*, *ballade*, *lai*, *virelai*, *sestina*, sonnet; with an appendix on metrical innovations—blank verse, metrical verse, and decadent (or free) verse. All the forms are quite lucidly set forth, and many interesting historical connexions are briefly indicated. There is no pretension to supply a complete treatise on French versification, but probably everything really essential to the general reader's understanding of the technique of French verse is effectively presented. The larger half of the volume is occupied by the illustrative specimens.

Whittaker's Modern Method of learning German. By C. W. Whitaker, B.A. (Oxon.), and H. G. Braun, Ph.D. (Leip.). (3s. net. Whitaker.)

The authors "supply materials for a human method of teaching," and regard private students as well as pupils and teachers in schools. They present a simplified grammar, to be learnt concurrently with twenty-eight lessons in reading, translation, and composition, the matter of which is worked into a connected story of modern everyday life, the scene being partly in Berlin (good map appended). Then a recapitulation of the whole story is given, and a number of exercises in translation, German-English and English-German. Appendices contain idiomatic expressions, proverbs, weights and measures and coinages, and what not. There is also a German-English vocabulary. The pronunciation needs to be helped out orally. We should not say that the *g* in *tag* is pronounced as the *ch* in the Scotch *loch*, or *g* in *König* as the *ch* in *Gespräch*, nor should we without explanation give the *ch* in *Gespräch* the (Southern) pronunciation indicated by the authors. *Löwe* (*lir'-ver*), *Wörter* (*ver'ter*), *Das Deutsche Alphabet* (*Duss doit'-scher Ull-fah-bate'*) do not seem satisfactory, and in one point at least may mislead. If the book attempts rather much, it yet presents the essentials in a vivid and practical form, and will be especially helpful, in its substantial elements, to private students. The print is bold and clear, and the binding is strong.

ENGLISH LITERATURE.

The Oxford Shakespeare. By W. J. Craig, M.A. (2s. Henry Frowde. The Florin Series of Standard Oxford Editions.)

The volume contains the complete works of the bard, in 1,272 pages, double-columns, beautifully printed, and tastefully and flexibly bound. Mr. Craig has brought his mature experience to bear upon the text,

holding to the early quartos and the folio of 1623 [except where it seemed to him "that the carelessness of either copyist or printer deprived a word or sentence wholly of meaning," but adopting a change when, though only when, "the characteristics of Shakespeare's vocabulary or literary style failed to justify the original reading." In this delicate enterprise he has tempered boldness with caution. For the uncertain orthography of the old editions he has substituted the recognized orthography of the present day, except where metrical or other considerations have rendered this course unadvisable. He has also thoroughly revised the punctuation, and added a sufficient and serviceable glossary. The edition is of the first quality in every respect.

"Cambridge English Classics." — *Roger Ascham's English Works* Edited by W. Aldis Wright, M.A., Vice-Master of Trinity College, Cambridge. (4s. 6d. net. Cambridge University Press.)

The volume contains "Toxophilus," "A Report and Discourse of the Affaires and State of Germany," and "The Scholemaster." The editor has lavished his characteristic care upon the text, and well deserves the thanks of those that like to have a work in its original form and aspect. The book is beautifully printed on light paper, handy in form, and agreeable to the eye.

Messrs. George Bell & Sons have added to their handy and attractive "Miniature Series of Great Writers" four fresh volumes (1s. net each): *Chaucer*, by the Rev. W. Tuckwell, M.A., and *Shakespeare*, by Alfred Ewen, each with eight illustrations; and *De Quincey*, by Henry S. Salt, and *Coleridge*, by Richard Garnett, C.B., LL.D. The volumes are comprehensive and critical, and evidently have been prepared with great care.

The *Shakespeare* volumes of the series of "Favourite Classics" (6d. each, Heinemann) are now completed, and form as convenient and agreeable an edition as one need wish to read or to handle. Dr. Brandes's introductions are piquant and distinctive, furnishing at the same time all necessary information on the various plays and poems. Each volume has an excellent frontispiece, artistically reproduced. The Cambridge text has been used by permission of Messrs. Macmillan.

HISTORY.

The Story of Rome, as Greeks and Romans tell it. By George Willis Botsford, Ph.D., Lecturer in Ancient History in Columbia University, and Lillie Shaw Botsford. (4s. 6d. Macmillan.)

Here is "an elementary source-book," whose object is "to supply pupils in Roman history with interesting and instructive reading from the sources," with the view of "bringing the reader so near to the Romans that he will look upon them as real men and women, whose character and conduct he can understand and appreciate." Hence, "although the book contains some descriptions of institutions, it is largely narrative and biographical; preference has been given to those passages which illustrate life and character, or which help the reader to an appreciation of general literature." Keeping sight of the special object of the authors, we think they have, on the whole, exercised fair judgment in selection of points for presentation, and have set them out in very attractive form. The volume may be made a useful complement to our more political histories. The critical element is very slender, and, indeed, appears mainly by implication when it appears at all. Thus, Tiberius is limned by Tacitus and Suetonius, without comment. Under every chapter is placed a well devised series of "studies," or questions, covering the matter of the narrative. The marginal headings and references will be helpful; and there is a useful index. The volume is well printed (Norwood Press) and strongly bound.

Messrs. Horace Marshall & Son furnish a first set of six *Historical Albums*, covering the period 1272-1399 (3s. per set), the subjects being: (1) Ecclesiastical Architecture, (2) Domestic Architecture, (3) and (4) Social Life, (5) Persons (portraits), and (6) Scenes and Incidents. They are very judiciously edited by Miss C. L. Thomson; they are fairly representative, and are taken from authentic sources; and they will prove very helpful by way of supplement to the ordinary history book.

MUSIC AND VOICE CULTURE.

Folk Songs from Somerset. Gathered and edited with pianoforte accompaniment by Cecil J. Sharp and the Rev. Charles L. Marson. (5s. net. Simpkin, Marshall, & Co.)

There are 27 songs, varied in character as in date, each with a beauty of its own, all apparently discovered by a happy chance. The supply is evidently not exhausted, for Mr. Marson in his charming introduction seems to speak of some 95 captures, with more in prospect. All this in and about a small village in Hampshire; whence one may infer the possibility of a vast recovery of folk songs, if there were explorers at work elsewhere throughout the country. Mr. Sharp and Mr. Marson deserve great credit for this labour of love. The publishers have furnished forth the collection in spacious form; and we hope their enterprise will be at least sufficiently appreciated to induce them to issue with like liberality all other folk songs that may be recovered.

(Continued on page 150.)

OXFORD UNIVERSITY PRESS.

BOOKS SET AND SUITABLE FOR THE COLLEGE OF PRECEPTORS' EXAMINATIONS, 1905.

Shakespeare. Edited by W. ALDIS WRIGHT. **Julius Caesar**, 2s. **Twelfth Night**, 1s. 6d.

Scott.—Lay of the Last Minstrel. Edited by W. MINTO. Second Edition. 1s. 6d. Separately, Introduction and Canto I. 6d.

Concise French Grammar, including Phonology, Accidence, and Syntax, for use in Upper and Middle Forms. By A. H. WALL. Crown 8vo, cloth, 4s. 6d.

Oxford Modern French Series. Edited by LEON DELBOS, M.A. Crown 8vo, cloth. The first Ten Volumes are the following:—LAMARTINE'S "Deux Héroïnes de la Révolution Française," 2s. 6d.; BALZAC'S "La Vendetta" and "Pierre Grassou," 2s.; VICTOR HUGO'S "Bug-Jargal," 2s.; SANDEAU'S "Mademoiselle de la Seiglière," 2s. 6d.; CHATEAUBRIAND'S "Mémoires d'Outre-Tombe," 2s. 6d.; KARR'S "Voyage autour de mon Jardin," 2s.; GOZLAN'S "Le Château de Vaux," 1s. 6d.; "Extraits de Voyages d'Alexis de Tocqueville," 2s.; THIERRY'S "Les Normands en Angleterre et en France," 2s. 6d.; DAVID'S "Le Serment," 1s. 6d.; GAUTIER'S "Voyage en Espagne" (*immediately*).

Tales of the Roman Republic, PART I. Adapted from the Text of Livy. By J. B. ALLEN. Extra fcap. 8vo, paper boards, 1s. 6d.

Caesar.—The Gallic War. BOOKS III–V. Edited by C. E. MOBERLY. Extra fcap. 8vo, cloth, 2s. 6d.

Horace.—Odes, Carmen Saeculare, and Epodes. By E. C. WICKHAM. Second Edition. Crown 8vo, cloth, 6s.

Virgil.—Aeneid. BOOKS I–III. By T. L. PAPILLON and A. E. HAIGH. Crown 8vo, stiff covers, 2s.

Euripides.—Hecuba. Edited by C. B. HEBERDEN. Extra fcap. 8vo, cloth, 2s. 6d.

Xenophon.—Anabasis. BOOK I. By J. MARSHALL. 1s. 6d. BOOK II. By C. S. JERRAM. 1s. 6d. BOOK III. 1s. 6d. BOOK IV. 1s. 6d. BOOKS III and IV, together. 3s.

Each volume has the full Vocabulary bound up with it; the Vocabulary can also be had separately for 1s.

Manual of the Four Gospels. By the Rev. T. H. STOKOE. With Maps. Crown 8vo, cloth, 3s. 6d. Or, separately, PART I, The Gospel Narrative, 2s.; PART II, The Gospel Teaching, 2s.

Manual of the Acts of the Apostles. By the same Editor. 3s.

School History of England (to the Death of Victoria). With Maps, Plans, and select Bibliographies. By O. M. EDWARDS, R. S. RAIT, and others. Crown 8vo, cloth, 3s. 6d.

Historical Geography of the British Colonies. By C. P. LUCAS, C.B. Crown 8vo, cloth.

Introduction. New Edition by H. E. EGERTON. 1903. With Eight Maps. 3s. 6d. In cheaper binding, 2s. 6d.

Vol. I. The Mediterranean and Eastern Colonies (exclusive of India). With Eleven Maps. 1888. 5s.

Vol. II. The West Indian Colonies. With Twelve Maps. 1890. 7s. 6d.

Vol. III. West Africa. Revised to the end of 1899 by H. E. EGERTON. With Five Maps. 7s. 6d.

Vol. IV. South and East Africa. Historical and Geographical. With Eleven Maps. 1898. 9s. 6d.

Also PART I. Historical. 6s. 6d. PART II (1903). Geographical. 3s. 6d.

Vol. V. Canada, PART I. 1901. 6s.

Elementary Political Economy. By E. CANNAN. Fourth Edition. Extra fcap. 8vo, stiff covers, 1s.

A Geometrical Political Economy. Being an Elementary Treatise on the Method of explaining some of the Theories of Pure Economic Science by means of Diagrams. By H. CUNYNGHAME, C.B., M.A. Crown 8vo, cloth, 2s. 6d. net.

Book-keeping. New and Enlarged Edition. By Sir R. G. C. HAMILTON and J. BALL. Extra fcap. 8vo, cloth, 2s.

Ruled Exercise Book to the above, 1s. 6d.; to Preliminary Course only, 4d.

Arithmetic. With or without Answers. By R. HARGREAVES. Crown 8vo, cloth, 4s. 6d.

Practical Work in General Physics. By W. G. WOOLLCOMBE. Crown 8vo, cloth, 2s. each part.

PART I. General Physics. Second Edition, Revised. PART II. Heat. Second Edition, Revised. PART III. Light and Sound. PART IV. Magnetism and Electricity.

Euclid Revised, containing the essentials of the Elements of Plane Geometry as given by Euclid in his first six Books. Edited by R. C. J. NIXON. Third Edition. Crown 8vo, cloth, 6s.

Sold separately as follows:—BOOK I, 1s., BOOKS I, II, 1s. 6d.; BOOKS I–IV, 3s.; BOOKS V, VI, 3s. 6d.

Experimental and Theoretical Course of Geometry. By A. T. WARREN. Crown 8vo, cloth. With or without Answers. Second Edition. 2s.

Geometry for Beginners: an Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. Extra fcap. 8vo, stiff covers, 1s. 6d.

SOME RECENT SCHOOL EDITIONS.

The Moscow Expedition. Extracted from THIERS'S "Histoire du Consulat et de l'Empire," Vol. XIV. Edited, with Introduction and Explanatory Notes, by HERFORD B. GEORGE. With Maps. Crown 8vo, cloth, 5s.

Relations of Geography and History. By H. B. GEORGE. With Two Maps. Crown 8vo, cloth, 4s. 6d.

Latin Exercises. By G. G. RAMSAY. In Three Volumes. Vol. I, Lower Grade. 1s. 6d. Vol. II, Higher Grade. 1s. 6d. Vol. III, Syntax. 2s. 6d.

Livy. BOOK VI. By A. R. CLUER. Second Edition. Revised by P. E. MATHESON. Fcap. 8vo, cloth, 2s.

The Preparation of the Child for Science. By M. E. BOOLE. Crown 8vo, cloth, uniform in size, binding, and price with Mrs. BOOLE'S "Logic of Arithmetic." 2s.

IMMEDIATELY.

Select Documents illustrative of the History of the French Revolution (May, 1789—September, 1791). Edited by L. G. WICKHAM LEGG, M.A. Two Vols., crown 8vo, cloth.

Jowett's Translation of Aristotle's Politics. With Introduction, Analysis, and Full Index added by H. W. C. DAVIS, M.A. Extra fcap. 8vo, cloth, 3s. 6d. net.

COMPLETE CATALOGUE POST FREE ON APPLICATION.

London: HENRY FROWDE, Oxford University Press Warehouse, Amen Corner, E.C.

Vocalism: its Structure and Culture, from an English standpoint. By W. H. Breare. (6s. net. Simpkin, Marshall, & Co.)

Mr. Breare discusses the whole subject, not exhaustively or dogmatically, but with adequate fullness for most students and in the way of suggestion. His method is purely English: "perfect pronunciation being essential to perfect tone, Italian methods cannot provide for the manifold varieties of expression encountered in the English language," and so "it is necessary to consider English vocal requirements from an English standpoint." He writes with great clearness and simplicity, and he claims to have tested every point that he advances. His work manifestly deserves the patient consideration of students, and will fully reward it.

ART—DESIGN—DRAWING.

The January number of *The Art-Workers' Quarterly* (2s. 6d. net, Chapman & Hall), with one coloured and seven supplementary plates, and the usual variety of good practical articles, opens the fourth volume. The editors think that "with truth it cannot be said that this age has any artistic direction of its own," and declare their "desire to continue to concentrate their efforts on the one phase of Art, viz., that of Decorative Art." Very well; and, if it is difficult to believe that in mediæval England "Art was common to the whole people," let us hope that "to non-artistic England" of later times "some glimmer of insight into the possible future of Art has come," and that this result is not unconnected with the *Quarterly*. It is a most meritorious and useful publication.

REGISTERS.

Messrs. E. J. Arnold & Son have just included in their "A.L. Official Series" *The "A.L." Pupil Teachers' Register and Record Book of Training in Elementary Schools* (No. 33, 1s. net); *The "A.L." Pupil Teachers' Admission Register* (No. 34, 500 names, 6s. net; 1,000 names, 10s. net); *The "A.L." Pupil Teachers' Centre Report and Record Book* (No. 35, 1s. net); and *The "A.L." Pupil Teachers' Centre Class Register and Record Book* (No. 36, 2s. net)—all specially prepared to meet the official requirements. The paper is good, and the binding substantial: and no doubt the Registers will be found to be very convenient and efficient.

ECONOMICS.

The Walter Scott Publishing Co. have just issued, in "The Scott Library," a new volume of *Expositions of the Fundamental Doctrines of Political Economy* selected from the best writers of the English school, with a lucid and instructive Introduction, by William Bell Robertson (1s. 6d.). The passages cover the main points. They will be very useful to such as have not ready access to the books they are taken from, and they will inspire a wish to study the subjects more fully in the more eminent authors' works. They are specially welcome in view of present fiscal discussions. Mr. Robertson has chosen them with excellent discrimination, and his introduction shows that he is familiar with economic subjects and a tough reasoner. The volume deserves a wide popularity.

Mr. Fisher Unwin publishes a brochure by Mr. Austin Taylor, M.P., *Side-Lights on Protection* (6d.), which shows, from evidence given by Americans before the United States Commission on the Merchant Marine, "how the American tariff has killed American shipping and protected the British shipowner." The pamphlet mainly reports facts, but the inferences are obvious enough. It contains some strikingly curious matter, very interesting here at the present time.

FIRST GLANCES.

CLASSICS.

Latin Grammar Papers, Key to. By A. C. Liddell, M.A. 3s. 6d. net. Blackie.

[Careful and helpful.]

Ovid, *Fasti V. and VI.* Edited by J. Thompson, M.A. Camb., and A. F. Watt, M.A. Oxon. 3s. 6d. Clive (University Tutorial Series).

[Useful introduction; good serviceable notes; full explanatory index of proper names.]

Übungsstücke zum Übersetzen in das Lateinische. Von Prof. Dr. Hermann Knauth. 1 mk. 50 pf. Williams & Norgate.

[Für Abiturienten. Erster Teil: Deutscher Text. Zweiter Teil: Lateinische Übersetzung. Fünfte Auflage. 60 exercises; well worth the attention of teachers of Latin composition.]

Virgil, *Aeneid*, Book II. Edited by R. J. Hughes, M.A. 1s. 4d. Dent (Temple Series of Classical Texts).

[Literary introduction; brief notes; full vocabulary.]

Virgil, *Aeneid III.* Edited by A. Sidgwick, M.A., Reader in Greek in the University of Oxford. 1s. 6d. Cambridge University Press (Cambridge Series for Schools and Training Colleges).

[Notes slightly abridged and revised from the editor's well known edition; complete vocabulary; introduction also revised.]

Xenophon, *Anabasis*. Books I., III., IV., edited by J. Marshall, M.A. (Edin. and Oxon.), Hon. LL.D. (Edin.); Book II., edited by C. S. Jerram, M.A. (Oxon.), 2nd Edition, revised. 1s. 6d. each. Clarendon Press.

[Uniform binding. Full vocabulary to the whole of the "Anabasis" appended to each volume. Introductions and notes adequate and careful. Excellent.]

MATHEMATICS.

Algebra, Grammar School. By David Eugene Smith, Ph.D., Professor of Mathematics in Teachers' College, Columbia University. 2s. 6d. Ginn.

[Seeks interest by showing the "utilities" of the subject.]

Arithmetic, Clive's Shilling. Edited by William Briggs, LL.D., M.A., &c. University Tutorial Press.

[Mainly exercises and problems; abundant and well chosen.]

Arithmetic, Macmillan's Picture. Books I. and II., 3d. each.

[Practical and vivid; well constructed exercises.]

Arithmetic, The "Council," for Schools. By T. B. Ellery, F.R.G.S. Scheme B, Parts III. and IV., 3d. each. Black.

Calculus, An Introduction to the. By George A. Gibson, M.A., F.R.S.E., Professor of Mathematics in the Glasgow and West of Scotland Technical College. 3s. 6d. Macmillan.

[Based on graphical methods. Answers.]

Geometry, A New, for Senior Forms. By S. Barnard, M.A., and J. M. Child, B.A. 3s. 6d. Macmillan.

Geometry, Elements of: Theoretical and Practical. By Braithwaite Arnett, M.A. Books I., II., and III., 2s. each. Simpkin, Marshall, & Co.

[Bold type and diagrams; numerous exercises.]

Geometry, Experimental and Practical, Lessons in. By H. S. Hall, M.A., and F. H. Stevens, M.A. 1s. 6d. Macmillan.

[Mainly introductory to "School Geometry." Answers.]

Geometry, Heuristic, for Preparatory Schools. By the Rev. George Harris, M.A. (T.C.D.). 9d. Meiklejohn & Holden.

[Essentially a book "to put in the hands of the pupil."]

Geometry, Practical, for Beginners. Part IV. By C. H. Allcock. 1s. 6d. Macmillan.

[Ratio and proportion. Abundant exercises; numerical answers.]

Logarithms, Blackie's Handy Book of. 2s.

[With practical geometrical appendix.]

Mathematics, Elementary Course of, comprising Arithmetic, Algebra, and Geometry. By H. S. Hall, M.A. and F. H. Stevens, M.A. 2s. 6d. Macmillan.

[Specially for after-school work, private, or in evening classes. Numerous examples; answers.]

Mathematics, Practical, Elementary. 1s. 6d. Oliver & Boyd; Simpkin, Marshall & Co.

[For technical and industrial classes. Answers.]

Number Lessons, Arnold's. Pupils' Books I.—VI., 2d., 2d., 3d., 3d., 3d.; Teachers' Books I.—VI., 4d., 4d., 4d., 6d., 6d., 6d.

Tables, Mathematical and Physical. Prepared by John B. Clark, M.A., F.R.S.E. 6d. Oliver & Boyd; Simpkin, Marshall, & Co.

[4-place logarithms. Handy for the pocket.]

Test Papers in Mathematics. Arranged by John Dougall, M.A. 1s. Blackie.

[Primarily for Scottish University Preliminary—Higher and Intermediate Standards: algebra, geometry, and trigonometry. Answers. Very useful.]

Trigonometry, A New, for Schools. By W. G. Borchardt, M.A., B.Sc., and the Rev. A. D. Perrott, M.A. 4s. 6d. George Bell (Cambridge Mathematical Series).

Trigonometry, Elementary. By C. H. P. Mayo, M.A. 3s. 6d. Longmans.

Trigonometry, The Elements of. By S. L. Loney, M.A., Professor of Mathematics at the Royal Holloway College (University of London). 3s. 6d. Cambridge University Press.

SCIENCE.

Certificate General Elementary Science. Part I. By T. W. Gardner, B.A. (Lond.). 3s. 6d. net. Normal Press (Normal Tutorial Series).

[Simple and lucid exposition; 357 experiments; 356 figures; summary and questions to each chapter; numerical answers.]

Chemistry, The Tutorial. By G. H. Bailey, D.Sc. (Lond.), Ph.D. (Heid.). Edited by William Briggs, LL.D., M.A., F.C.S., F.R.A.S. Part I., Non-Metals; Part II., Metals, with a section on Physical Chemistry. 3s. 6d. each. Clive (University Tutorial Series).

[Second edition, rewritten and enlarged. Carefully brought up to date. Very serviceable for degree examinations.]

Magnetism and Electricity, Second Stage. By R. Wallace Stewart, D.Sc. Lond. 3s. 6d. Clive (Organized Science Series).

[Second edition, rewritten and enlarged. Exposition clear and pointed. 240 figures. Very useful.]

COLLEGE OF PRECEPTORS.

TEACHERS' DIPLOMA EXAMINATION.

CHRISTMAS, 1904.

THE Christmas Examination commenced on the 3rd of January, 1905, and was held in London and at the following Local Centres:— Birmingham, Blackburn, Bristol, Falkirk, Jersey, Leeds, Manchester, Newcastle-on-Tyne, Plymouth, Rugby, Southbourne, Stornoway, West Hartlepool, Georgetown (British Guiana), and Hankow (China).

The total number of candidates examined was 541.

The following are the names of the candidates who passed in the various subjects: (*hon.*) attached to a name, or to a letter denoting a subject, indicates that the candidate obtained Honours in the subject:—

Theory and Practice of Education.

LICENTIATESHIP.

- Armes, Miss J. P.
- Backhouse, J.
- Baker, W.
- Bennett, F. E.
- Buist, Miss E. E.
- Burness, G. F.
- Carss, J.
- Clark, D.
- Cliff, S.
- Cock, H.
- Green, G. H.
- Groves, F. L.
- Hart, G. L.
- Higginbottom, J.
- Ibbett, Miss D.
- Jarvis, T. F.
- Jeaus, Miss F. J.
- Jones, B.
- Kent, Miss T.
- Kirkpatrick, J.
- Lambert, W.
- Laws, Miss R. N. C.
- Leal, A.
- Legg, Miss E. M.
- Macleod, A.
- Mason, Miss M. J.
- McDermott, Miss M. J.
- Rayner, H. E.
- Riches, F. M.
- Rigby, E.
- Roe, Miss M. B.
- Sainsbury, C. W.
- Shaw, F. A.
- Skyrin, Ll.
- Slefrig, S.
- Staples, F. L.
- Thomas, E. H.
- Tottman, Miss A.
- White, Miss L.
- Whittaker, H.
- Winterton, S. C.

ASSOCIATESHIP.

- Allison, Miss E. B.
- Almond, Miss M. C.
- Bachelor, G. C.
- Barker, A. J.
- Barralet, Miss E. G.
- Beusky, A.
- Bickley, J. T. W.
- Bird, R. T.
- Biss, Miss H. H.
- Bodger, Miss E. V.

COLLEGE OF PRECEPTORS.

CERTIFICATE EXAMINATION,

DECEMBER, 1904.

The following is the list of the successful candidates at the Colonial and Foreign Centres.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

- a. = Arithmetic. g. = Geography.
al. = Algebra. ge. = German.
bk. = Book-keeping. gm. = Geometry.
ch. = Chemistry. he. = Hebrew.
d. = Drawing. s. = Scripture.
du. = Dutch. sh. = Shorthand.
e. = English. sp. = Spanish.
f. = French.

The small figures 1 and 2 prefixed to names in the

Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively. Bracketing of names denotes equality.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll. S. = Collegiate School, Comm. = Commercial, End. = Endowed, Found. = Foundation, H. = House, Inst. = Institute, Int. = International, Inter. = Intermediate, Prep. = Preparatory, S. = School, Tech. = Technical, Univ. = University.

Boys.

MATHEMATICS.

15481. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorize completely
 $N = 96^{18} + 1$.

Additional Solution by Professor SANJANA, M.A.

I have not seen Lucas's work referred to by the Proposer, but the following is a simple method of getting the result:—

Let $6x$ be of the form y^2 ; then

$$x^6 + 1 = (x^2 + 1)(x^4 - x^2 + 1) = (x^2 + 1) \{ (x^2 + 3x + 1)^2 - 6x(x + 1)^2 \}$$

$$= (x^2 + 1) \{ x^2 + 3x + 1 - y(x + 1) \} \{ x^2 + 3x + 1 + y(x + 1) \},$$

and
 $x^{18} + 1 = (x^6 + 1)(x^{12} - x^6 + 1) = (\text{product of factors above})$
 $\times \{ x^6 + 3x^3 + 1 - xy(x^3 + 1) \} \{ x^6 + 3x^3 + 1 + xy(x^3 + 1) \}.$

In the present case, $x = 96$ and $y = 24$; so that we have the following factors of N :—

$$96^2 + 1 = 9217; \quad 96^2 + 3 \cdot 96 + 1 - 24 \cdot 97 = 7177;$$

$$96^2 + 3 \cdot 96 + 1 + 24 \cdot 97 = 11833;$$

$$96^6 + 3 \cdot 96^3 + 1 - 2304(96^3 + 1) = 780,722,009,857;$$

$$96^6 + 3 \cdot 96^3 + 1 + 2304(96^3 + 1) = 784,798,877,953.$$

Now $9217 = 13 \cdot 709$, and $7177, 11833$ are primes. It therefore remains to test the last two numbers, and this the Proposer has done (*Reprint, New Series, Vol. vi., p. 63*). We thus finally obtain

$$96^{18} + 1 = 13 \cdot 709 \cdot 7177 \cdot 11833 \cdot 37 \cdot 397 \cdot 53150113 \cdot 73 \cdot 613 \cdot 17537797.$$

I cannot offer any opinion on the primeness of the two large factors.

N.B.—The Proposer remarks that this factorization is practically the same as Lucas's.

Note.—For the Proposer's Solution see *Reprint, New Series, Vol. vi., p. 62*.

15582. (W. SCRIMGEOUR, M.A., B.Sc.)— QSQ' is a focal chord of a conic. PG , the normal at a point P on the curve, is perpendicular to QSQ' , and meets the axis in G . Prove that $QS \cdot Q'S = PG^2$.

Solutions (I.) by F. W. REEVES, B.A., and others; (II.) by C. M. ROSS and C. A. B. GARRETT; (III.) by R. F. DAVIS, M.A.; (IV.) by R. TUCKER, M.A.

(I.) Fig. 1 (*Parabola*).—The figures explain themselves. Because QSQ' is the focal chord, and $QT, Q'T$ are tangents, the angles QTQ', QST are right angles. Also PG is perpendicular to the tangent at P and also to QSQ' , i.e., parallel to ST , and PT is parallel to SG ; therefore

$$PG^2 = ST^2 = VT^2 - SV^2 = QV^2 - SV^2 = QS \cdot SQ'.$$

FIG. 1.

FIG. 2.

Fig. 2 (*Central Conic*).—Because QQ', AA' intersect in S ,
 $QS \cdot Q'S : AS \cdot A'S = CD^2 : CA^2 = PG^2 : CB^2$.

But $AS \cdot A'S = CB^2$; therefore $QS \cdot Q'S = PG^2$.

(II.) Using polar co-ordinates and denoting the points Q, Q', P by $(r_1, \alpha_1), (r_2, 180^\circ + \alpha), (r_3, \beta)$,

$$r_1 = l/(1 - \epsilon \cos \alpha), \quad r_2 = l/(1 + \epsilon \cos \alpha),$$

$$r_3 = l/(1 - \epsilon \cos \beta);$$

therefore $QS \cdot Q'S = r_1 r_2 = l^2/(1 - \epsilon^2 \cos^2 \alpha)$.

The equation of the normal at P in Cartesian is

$$\frac{1 - \epsilon \cos \beta}{\epsilon} x + \frac{(1 - \epsilon \cos \beta)(\epsilon - \cos \beta)}{\epsilon \sin \beta} y = \frac{l}{r} \dots (1).$$

The equation of the focal chord is

$$y = x \tan \alpha \dots \dots \dots (2).$$

(1) and (2) are perpendicular by hypothesis; therefore $\tan \alpha \sin \beta = \cos \beta - \epsilon$; therefore

$$\cos^2 \beta - 2\epsilon \cos^2 \alpha \cos \beta + \epsilon^2 \cos^2 \alpha - \sin^2 \alpha = 0;$$

therefore $\cos \beta = \epsilon \cos^2 \alpha \pm \sin \alpha (1 - \epsilon^2 \cos^2 \alpha)^{1/2}$.

Now $SG = SR \sec \alpha = r_3 \cos(\beta - \alpha) \sec \alpha$;

therefore $PG^2 = SG^2 + SP^2 - 2SG \cdot SP \cos \beta = l^2 \sin^2 \beta / \cos^2 \alpha (1 - \epsilon \cos \beta)^2$

(on simplification). Again

$$\sin^2 \beta = \cos^2 \alpha [(1 - \epsilon^2 \cos^2 \alpha)^{1/2} - \epsilon \sin \alpha]^2$$

and $(1 - \epsilon \cos \beta)^2 = (1 - \epsilon^2 \cos^2 \alpha) [(1 - \epsilon^2 \cos^2 \alpha)^{1/2} - \epsilon \sin \alpha]^2$;

therefore $PG^2 = l^2/(1 - \epsilon^2 \cos^2 \alpha) = QS \cdot Q'S$.

(III.) Draw SZ at right angles to QSQ' to meet the S directrix in Z ; then CZ passes through P and bisects QQ' in V , say. Draw VE parallel to PG . Since

$$CP^2 = CV \cdot CZ,$$

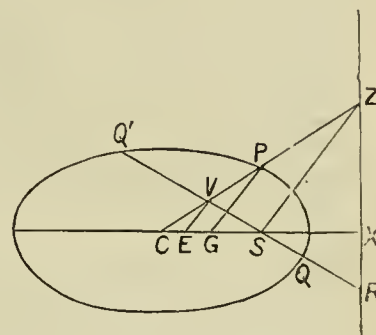

therefore

$$PG^2 = VE \cdot ZS = VS \cdot SR$$

(for $VE : VS = SR : ZS$)

$$= VS \cdot VR - VS^2 = VQ^2 - VS^2$$

$$= QS \cdot Q'S.$$

(IV.) Let $\angle QSG = \theta$; then $SQ \cdot SQ' = l^2/(1 - e^2 \cos^2 \theta) \dots \dots \dots (i).$

Now $\tan \theta = b \cot \phi/a$, where ϕ is the eccentric angle of P ,

$$\sec^2 \theta = (a^2 \sin^2 \phi + b^2 \cos^2 \phi)/(a^2 \sin^2 \phi),$$

and $PG^2 = b^2 (b^2 \cos^2 \phi + a^2 \sin^2 \phi)/a^2 = b^2 (1 - e^2 \cos^2 \phi) \dots \dots \dots (ii).$

Now (i.) is $l^2 \{ 1 - [e^2 a^2 \sin^2 \phi / (a^2 \sin^2 \phi + b^2 \cos^2 \phi)] \}$
 $= l^2 a^2 (1 - e^2 \cos^2 \phi) / b^2 = b^2 (1 - e^2 \cos^2 \phi) = PG^2.$

15703. (Communicated by A. V. KUTTI KRISHNA MENON, B.A.)—Prove that

$$\cos ax = 1 - ax \sin bx - [a(a-2b)/2!] x^2 \cos 2bx + [a(a-3b)^2/3!] x^3 \sin 3bx$$

$$+ [a(a-4b)^3/4!] x^4 \cos 4bx - \dots$$

[Note.—The Proposer desires to obtain an elegant solution.]

Solution by K. S. PATRACHAN.

Burmans's theorem gives us for the expansion of any function $f(z)$ in terms of any other function $F(z)$

$$f(z) = f(c) + \sum_{r=1}^{\infty} \frac{B_r \{F(z)\}^r}{r!},$$

where

$$B_r = \left[\frac{d^{r-1}}{dz^{r-1}} \left\{ \left(\frac{z-c}{F(z)} \right)^r f'(z) \right\} \right]_{z=c}$$

and c is a root of the equation $F(z) = 0$. (See Edwards's *Differential Calculus*.) Putting $f(z) = e^{az}$ and $F(z) = ze^{bz}$, we have $c = 0$, and

$$\left\{ (z-c)/F(z) \right\}^r f'(z) = a e^{(a-br)z};$$

therefore

$$B_r = \left\{ d^{r-1}/dz^{r-1} [a e^{(a-br)z}] \right\}_{z=0} = [a(a-br)^{r-1} e^{(a-br)z}]_{z=0} = a(a-br)^{r-1}$$

and

$$f(c) = e^0 = 1.$$

Therefore

$$e^{az} = 1 + \sum_{r=1}^{\infty} \frac{a(a-br)^{r-1} (ze^{bz})^r}{r!}$$

$$= 1 + \frac{a}{1!} z e^{bz} + \frac{a(a-2b)}{2!} (ze^{bz})^2 + \frac{a(a-3b)^2}{3!} (ze^{bz})^3 + \frac{a(a-4b)^3}{4!} (ze^{bz})^4 + \dots$$

In this result substitute successively for z, ix and $-ix$ ($i = \sqrt{-1}$); we have

$$e^{iax} = 1 + \frac{a}{1!} ix e^{ibx} + \frac{a(a-2b)}{2!} i^2 x^2 e^{2ibx} + \frac{a(a-3b)^2}{3!} i^3 x^3 e^{3ibx}$$

$$+ \frac{a(a-4b)^3}{4!} i^4 x^4 e^{4ibx} + \dots$$

and

$$e^{-iax} = 1 + \frac{a}{1!} (-ix) e^{-ibx} + \frac{a(a-2b)}{2!} (-ix)^2 e^{-2ibx} + \frac{a(a-3b)^2}{3!} (-ix)^3 e^{-3ibx}$$

$$+ \frac{a(a-4b)^3}{4!} (-ix)^4 e^{-4ibx} + \dots$$

Therefore, adding these two results, we have

$$2 \cos ax = 2 - 2 \frac{a}{1!} x \sin bx - 2 \frac{a(a-2b)}{2!} x^2 \cos 2bx + 2 \frac{a(a-3b)^2}{3!} x^3 \sin 3bx + \dots,$$

since $e^{i\theta} + e^{-i\theta} = 2 \cos \theta$ and $e^{i\theta} - e^{-i\theta} = 2i \sin \theta$, and on division by 2, we get the required result.

14907. (Professor A. DROZ-FARNY.)—Soit Σ une conique inscrite dans un triangle ABC . La tangente à Σ parallèle au côté BC et la tangente issue du milieu de BC se coupent en α . On obtient de même deux points analogues β et γ . Démontrer que les trois points α, β et γ sont en ligne droite.

Solution by Professor NANSON.

Consider the more general problem in which the tangents from α, \dots cut BC, \dots in points X, X', \dots , such that X, Y, Z are collinear and X, X' are harmonic conjugates to B, C ; ...

Expressing that the intersections X, X' of the tangents

$$l/(yz' - y'z) + m/(zx' - z'x) + n/(xy' - x'y) = 0$$

from xyz to an in-conic are harmonic to B, C, we have

$$-lx + my + nz = 0 \dots\dots\dots (1),$$

and expressing that X or X' is on $\lambda x' + \mu y' + \nu z' = 0$, we have

$$\mu^2 ny + \nu^2 mz = 0 \dots\dots\dots (2).$$

(1) and (2) determine a , and hence α, β, γ lie on the line

$$\frac{l^2}{\lambda^2} \{-lx + my + nz\} + \frac{m^2}{\mu^2} \{lx - my + nz\} + \frac{n^2}{\nu^2} \{lx + my - nz\} = 0.$$

Note.—For another solution, see *Reprint*, New Series, Vol. 1., p. 75.

7879. (D. EDWARDS.)—In any spherical triangle, prove that

$$2 \sin s \sec^2 r = \sin c \cos (s-c) + \sin b \cos (s-b) + \sin a \cos (s-a),$$

r being the inscribed radius and $2s$ the perimeter.

Solution by Professor SANJANA, M.A., J. WEIR, and others.

Since $\tan r = n/\sin s = \sqrt{[\sin (s-a) \sin (s-b) \sin (s-c)]/\sqrt{(\sin s)}}$, we get the sinister

$$\begin{aligned} &= 2 \sin s + 2 \sin (s-a) \sin (s-b) \sin (s-c) \\ &= 2 \sin s + \sin (s-c) [\cos (a-b) - \cos c] \\ &= 2 \sin s + \frac{1}{2} \sin (s-c+a-b) + \frac{1}{2} \sin (s-c-a+b) - \frac{1}{2} \sin s + \frac{1}{2} \sin (2c-s) \\ &= \frac{3}{2} \sin s + \frac{1}{2} \sin (2a-s) + \frac{1}{2} \sin (2b-s) + \frac{1}{2} \sin (2c-s) \\ &= \Sigma \frac{1}{2} [\sin s + \sin (2a-s)] = \Sigma \sin a \cos (s-a), \end{aligned}$$

which is the dexter.

15667. (Professor NEUBERG.)—Chercher la condition pour que les équations $\tan x = a \tan (y-z)$, $\tan y = b \tan (z-x)$, $\tan z = c \tan (x-y)$ soient compatibles.

Additional Solution by the PROPOSER.

La première équation peut s'écrire

$$\frac{\tan x}{\tan (y-z)} = a, \quad \frac{\tan x + \tan (y-z)}{\tan x - \tan (y-z)} = \frac{a+1}{a-1}, \quad \frac{\sin (x+y-z)}{\sin (x-y+z)} = \frac{a+1}{a-1}.$$

De même $\frac{\sin (y+z-x)}{\sin (y-z+x)} = \frac{b+1}{b-1}, \quad \frac{\sin (z+x-y)}{\sin (z-x+y)} = \frac{c+1}{c-1}.$

d'où l'on déduit la condition cherchée

$$\frac{a+1}{a-1} \frac{b+1}{b-1} \frac{c+1}{c-1} = 1 \quad \text{ou} \quad \frac{1}{a} + \frac{1}{b} + \frac{1}{c} + \frac{1}{abc} = 0.$$

15692. (Professor SANJANA, M.A.)—At every point P of a parabola the radius of curvature, PO, is taken, and from O the remaining normal, OP', is drawn to the curve. Prove that the envelope of the chord PP' is a parabola with the same vertex and with its concavity in the opposite direction.

Solution by A. S. TOMBE, M.A., and P. V. SESHU.

Let the point P be $(am^2, 2am)$ and P' be (x_1, y_1) . Since the sum of the ordinates of the feet of the normals from a point = 0, therefore

$$4am + y_1 = 0,$$

whence P' given by $(4am^2, -4am)$. The equation of PP' is therefore

$$4am^2 - my - 2x = 0;$$

therefore the envelope is $y^2 = -32ax$.

15697. (Professor E. B. ESCOTT.)—Find all the integral solutions, if possible, of the equation $x^2 - 17 = y^3$.

Solutions (I.) by R. F. DAVIS, M.A.; (II.) by Lt.-Col. ALLAN CUNNINGHAM, R.E.

(I.) In other words, we require to find integral values of y such that $y^3 + 17 = \square$. Let $y = t - 1$; then $t^3 - 3t^2 + 3t + 16 = \square = (\lambda t + 4)^2$, say; whence $t^2 - (\lambda^2 + 3)t + 3 - 8\lambda = 0$. This equation is a quadratic in t , if λ be known; or it is a quadratic in λ , if t be known. Now, if one root of a quadratic with rational coefficients be rational, so also is the other root. Supposing $t = a$, $\lambda = \beta$ satisfy the above equation, if we substitute a for t , we get (solving for λ) $\lambda = \beta$ or $\lambda = \gamma$; then, substituting γ for λ , we get (solving for t) $t = a$ and $t = \delta$; and so on. Hence any single solution leads to an interminable chain of other solutions. (See my note in *Proc. Edin. Math. Soc.*, Vol. XIII., p. 179.) It will be found that $t = -1, 0, 3, 5, 9, 53, 5235$. Thus $y = -2, -1, 2, 4, 8, 52, 5234, \dots$

$$[5234^3 + 17 = 14,33841,52921 = 378661^2].$$

[Rest in *Reprint*.]

8874. (Professor GENESE, M.A.)—The locus of the centres of sections of the conicoid $f(xyz) = 0$ by planes containing the axis of z is the conic determined by $df/dz = 0$, $x(df/dx) + y(df/dy) = 0$.

Additional Solution by Professor NANSON.

The plane section whose centre is the point α, β, γ is

$$(x-\alpha)f_\alpha + (y-\beta)f_\beta + (z-\gamma)f_\gamma = 0,$$

and, if this passes through the axis of z , then $f_\gamma = 0$ and $\alpha f_\alpha + \beta f_\beta = 0$, whence the result stated. (Cf. *Reprint*, New Series, Vol. II., p. 36.)

15705. (S. C. BAGCHI, B.A.)—Four pairs of inverse points are taken on a cubic which is its own inverse in normal co-ordinates. The joins of corresponding points cut a series of straight lines in points rP_s ($r = 1, s = 1, 2, 3, 4$ for the first line of the series; $r = 2, s = 1, 2, 3, 4$ for the second; and so on). These points are mapped into curves in another part of the plane. The scheme of transformation

$$rP_s = \phi(x, y, r\lambda_s)$$

gives that the range formed by the points where a parallel to the y -axis in the transformed figure cuts a group of four curves is equi-cross with any of the ranges in the first figure. Show that $\phi = u$ (u being a solution of Riccati's equation) is a possible form.

[Note.—The word "inverse" is to be taken in the general sense given by Salmon; see *Higher Plane Curves*.]

Solution by the PROPOSER.

The equation to the cubic (taking the general sense of "inverse," see Salmon, *Higher Plane Curves*, p. 157, French Edition) may be written $\Delta = 0$, where $\Delta = \begin{vmatrix} a & b & c \\ x & y & z \\ x^{-1} & y^{-1} & z^{-1} \end{vmatrix}$. Any line II' , where I, I' are corre-

sponding points on $\Delta = 0$, is given by $\Delta_1 = 0$ where

$$\Delta_1 = \begin{vmatrix} x & y & z \\ \alpha & \beta & \gamma \\ \alpha^{-1} & \beta^{-1} & \gamma^{-1} \end{vmatrix}$$

[because if I be (α, β, γ) , I' must be $(\alpha^{-1}, \beta^{-1}, \gamma^{-1})$]. Therefore any line such as II' passes through a fixed point, viz., (a, b, c) . Therefore the range rP_s has a constant cross-ratio. Now it is easily seen that u , the solution of Riccati's equation, satisfies $\lambda(Du - B) = (A - Cu)$, where A, B, C, D are functions of x and λ is a constant, and u satisfies

$$p + \psi_1 + y\chi_1 + y^2\phi_1 = 0,$$

where $p = dy/dx$ and ψ_1, χ_1, ϕ_1 are functions of x . Therefore, taking four particular solutions corresponding to four values of λ , we see that, if a parallel to y -axis cuts this family of curves, viz.,

$$\phi(x, y, r\lambda_s) = 0, \quad r = 1, 2, 3, 4,$$

in P, Q, R, S, (PQRS) = $rP_s = \text{constant}$.

15691. (JAMES BLAIKIE, M.A.)—BAC is an angle in a circle, and AB, AC meet a diameter in D and E; D' and E' are the images in O of D and E. Prove that BE', CD' meet (in A') on the circumference.

Solution by Professor SANJANA, M.A., and the late R. TUCKER, M.A.

Let X, Y be the extremities of the diameter passing through the centre O; then $XD = YD'$ and $XD' = YD$; also $XE = YE'$ and $YE = XE'$. Hence $XD \cdot YE : XE \cdot YD = XE' \cdot YD' : XD' \cdot YE'$, i.e., $(XY, DE) = (XY, E'D')$ and $A(XY, DE) = A'(XY, E'D')$. Therefore $A(XBCY) = A'(XBCY)$; also X, B, C, Y are four points on the circle and A is on the circle; therefore, finally, A' is also on the circle.

Note.—Let BC meet XY in F, and let F' be isotomically conjugate to F in XY; then BE', CD', AF' meet in a point. (See Question 14233, Vol. LXXV.) We have thus the following theorem:—XY is a diameter of the circum-circle of ABC; A', B', C' are the isotomic conjugates with regard to XY of the intersections of BC, CA, AB with XY: then AA', BB', CC' are concurrent on the circumference.

15624. (D. BIDDLE.)—In a cubic equation of form $x^3 - qx - r = 0$, r is the product of two primes. Show what numerical value to attach to q in order that the smaller factor of r may be one of the roots; also find the remaining roots, and prove that Cardan's method does not enable us to solve any given equation of the particular sort, unless the larger factor of r exceed the square of half the smaller one.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

x_1, x_2, x_3 the three roots; $r = p_1 p_2$ (two primes and $p_1 < p_2$). Let $x_1 = p_1$. Then $p_1 p_2 = r = x_1 x_2 x_3$, whence $x_2 x_3 = p_2$ and $x_1 + x_2 + x_3 = 0$, and $x_2^2 + x_3^2 + x_1 x_2 = -q$. Hence $p_2 + x_1(x_2 + x_3) = -q$, and $p_2 - p_1^2 = -q$ (which gives the value of q).

To find the other roots x_2, x_3 : here, since p_1 is a root, $x^3 - qx - r = 0$, and $p_1^3 - qp_1 - r = 0$; therefore $x^3 - p_1^3 - q(x - p_1) = 0$, whence

$$x^2 + p_1 x + p_1^2 - q = 0 \quad \text{or} \quad x^2 + p_1 x + p_2 = 0,$$

which gives $x = -\frac{1}{2}p_1 \pm \sqrt{(\frac{1}{4}p_1^2 - p_2)}$ (the required roots).

These two roots will be both real if $p_2 < \frac{1}{4}p_1^2$, and both imaginary if $p_2 > \frac{1}{4}p_1^2$. And Cardan's rule is known to be applicable only when two roots are imaginary, i.e., in the present case when $p_2 > \frac{1}{4}p_1^2$.

15509. (C. M. ROSS.)—Having given the base and the altitude of a triangle, and that one of the angles at the base is double the other, show how to construct the triangle.

Another Solution by GEORGE SCOTT, M.A.

Suppose ABC to be the triangle so constructed. Through C draw a parallel to the base. At B, the greater base angle, erect the altitude BF and produce it to meet AC produced in D. Bisect BCF by CE. The angle DCF will be equal to the angle ECF. Call DF = EF = z and BF = h; let CF = x; let AB = c. Then

$$(h-z)/z = \sqrt{(x^2 + h^2)}/x.$$

Again, $c/x = (h+z)/z$; therefore

$$h/z = [\sqrt{(x^2 + h^2)} + x]/x.$$

Also $h/z = (c-x)/x$, whence

$$\sqrt{(x^2 + h^2)} = c - 2x;$$

therefore $3x^2 - 4cx + c^2 - h^2 = 0$, $x = \frac{1}{3}[2c \pm \sqrt{(c^2 + 3h^2)}]$.

Mr. SCOTT discusses in the following manner a problem (suggested by Question 15509) :—

Given the base and vertical angle of a triangle, to construct it so as to have one base angle double the other.

It is evident that in such a triangle a parallel to the base drawn through the vertex would trisect the external vertical angle. Therefore proceed thus:—Lay down the angle supplemental to the given one. Then, by means of the Slide Trammel invented by me, and which I have described in *The Educational Times*, April 1, 1903, trace the curve there mentioned. The instrument should be so adjusted that the fixed pivot A should be in the line from which the laid down angle is measured, while the slot LM should be perpendicular to this line. Moreover, the distance of A from the vertex of the angle should be double its distance from the slot LM. The point where the curve cuts the second side of the angle should be joined to A. The angle thus formed will be one-third of that laid down. At one end of the given base make an angle equal this third, at the other an angle double it.

9807. (Professor G. B. M. ZERR.)—The perpendiculars from the vertices of a triangle upon the central axis (the line which passes through the circum-centre, the orthocentre, the nine-point centre, and the centroid) are proportional to

$$\cos A \sin(B-C), \cos B \sin(C-A), \cos C \sin(A-B),$$

those on one side of the line being reckoned positive, and those on the other negative.

Solution by the PROPOSER.

Since the line passes through the centroid and orthocentre, its equation in trilinear co-ordinates is

$$(\sec B \operatorname{cosec} C - \sec C \operatorname{cosec} B) \alpha + (\sec C \operatorname{cosec} A - \sec A \operatorname{cosec} C) \beta + (\sec A \operatorname{cosec} B - \sec B \operatorname{cosec} A) \gamma = 0.$$

This equation immediately follows when we remember that the co-ordinates of centroid and orthocentre are respectively $\operatorname{cosec} A, \operatorname{cosec} B, \operatorname{cosec} C$, and $\sec A, \sec B, \sec C$. The co-ordinates of the vertices are respectively $\Delta/(r \sin A), 0, 0; 0, \Delta/(r \sin B), 0; 0, 0, \Delta/(r \sin C)$. The perpendicular distances are given by $(l\alpha' + m\beta' + n\gamma')/\sqrt{(A^2 + B^2)}$, where α', β', γ' represent in turn the co-ordinates of the vertices, and l, m, n the coefficients of α, β, γ in the given equation. Therefore the distances are proportional (since Δ/r and $\sqrt{(A^2 + B^2)}$ are constant) to

$$\frac{\sin B \cos C - \cos B \sin C}{\sin A \sin B \cos B \sin C \cos C}, \frac{\sin C \cos A - \cos C \sin A}{\sin A \sin B \sin C \cos A \cos C}, \frac{\sin A \cos B - \cos A \sin B}{\sin A \sin B \sin C \cos A \cos B}.$$

Multiply the numerator and denominator of the first fraction by $\cos A$, of the second by $\cos B$, of the third by $\cos C$; then the denominators of the three fractions are the same and equal to

$$\sin A \sin B \sin C \cos A \cos B \cos C.$$

Hence the perpendiculars are proportional to

$$\cos A \sin(B-C), \cos B \sin(C-A), \cos C \sin(A-B).$$

15664. (R. CHARTRES.)—Express $1/(r^n + 1)^2$ as a radix fraction in the scale radix = r .

Solution by the PROPOSER.

Let $x = \cdot 0000, (r-1)(r-2) 02, (r-1)(r-4) 04, \dots, 01 (r-1)(r-1) 00$; then

$r^2x = \cdot 00 (r-1)(r-2), 02 (r-1)(r-4), 04 (r-1)(r-6), \dots, (r-1)(r-1) 00$;

therefore $(r^2 + 1)x = \cdot 00 (r-1)(r-1) = 1/(r^2 + 1)$;

therefore $x = 1/(r^2 + 1)^2$.

This supposes r to be odd, but, if r be even, the middle term of the above would be $00 (r-1)(r-1)$, and the result the same. Similarly for any other value of n .

QUESTIONS FOR SOLUTION.

15732. (D. BIDDLE.)—Two trains leave Waterloo (Central Station) at the same time. A does 30 miles in the first hour, and goes on at a uniform speed of 10 miles every 20 minutes. B takes 20 minutes to do the first mile, but in every succeeding period of 20 minutes doubles the distance covered in that preceding. Prove that, if B's speed be uniform during each such "period," B will overtake A 58 miles 1120 yards down the line. But also give the time and distance on the supposition that the speed of B is smoothly accelerated from the start.

15733. (Professor M. W. CROFTON, F.R.S.)—An urn contains two balls, A and B. The probability that A is black is p ; that B is black, q . One ball is now drawn, and found to be black :—(1) What is the chance that this is A or B? (2) What is now the probability that A is black or B? (3) If the ball drawn is replaced in the urn, and a fresh drawing made, what is the chance it gives a black ball?

[The balls A, B may be supposed to have been taken from two bags containing black and white balls in given proportions.]

15734. (S. C. GOULD.)—Give all the different square numbers that can be formed by the ten digits. The Proposer has developed eighty-seven such numbers. Are there any more?

15735. (Professor E. B. ESCOTT.)—In Question 15715, if we denote by D_n the partial divisors, i.e.,

$$\sqrt{N} = a_0 + 1/u_1, \quad u_1 = (\sqrt{N} + A_1)/D_1 = a_1 + 1/u_2, \quad \dots,$$

and by a_n the middle quotient, $A_n = A_{n+1} = a^n$ and $D_n = 2$.

15736. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—(i.) Factorize into prime factors $N = (70,600,734^2 + 1)$. Here $N = q \cdot p^2$, where p is a large prime. (ii.) Show how to find very large numbers ($> 10^{50}$) of form

$$N = y^2 + 1 = q \cdot m^2,$$

wherein m is very large ($> 10^{25}$). Give examples.

15737. (J. J. BARNIVILLE, B.A., I.C.S.)—Having $u_n + u_{n+1} = u_{n+3}$, prove that

$$\frac{3.3.4}{1.2.2.7} - \frac{3.5.5}{1.2.3.9} + \frac{4.6.7}{2.3.4.12} - \frac{6.8.9}{2.4.5.16} + \dots = \frac{1}{15},$$

$$\frac{2.3.9}{1.2.4.5} + \frac{3.3.11}{1.2.5.7} + \frac{4.5.15}{1.3.7.9} + \frac{5.6.20}{2.4.9.12} + \dots = \frac{47}{6}.$$

15738. (Professor NANSON.)—Eliminate λ from $\sum [a_r/(c_r + \lambda)] = 0$, $\sum [b_r/(c_r + \lambda)] = 0$, where $r = 1, 2, \dots, n$.

15739. (Professor SANJANA, M.A.)—Evaluate

$$[(\tanh ax)^{-2} - (ax - \frac{1}{3}a^3x^3)^{-2}]/x^2$$

when $x = 0$.

15740. (S. C. BAGCHI, B.A.)—Supposing that $\phi(\xi_1, \xi_2, \dots, \xi_n)$ gives the most probable value of a magnitude which is observed to have values $\xi_1, \xi_2, \dots, \xi_n$ for n different observations successively such that $\xi_2 - \xi_1 = \delta_2, \xi_3 - \xi_2 = \delta_3, \dots, \xi_n - \xi_{n-1} = \delta_n$, show that a particular solution of the general differential equation for ϕ satisfies

$$n(\phi - \xi_1) = (n+1) \sum_{r=2}^n \delta_r.$$

15741. (R. CHARTRES.)—From a point within a triangle straight lines parallel to the sides are drawn to the base. Find the mean value of the n -th power of the area of the triangle thus formed. (Elementary proof wanted.)

15742. (Professor NEUBERG.)—On enlève les angles solides A, B, C, D d'un tétraèdre ABCD en menant des plans respectivement parallèles aux faces opposées, de manière qu'il reste un octaèdre à quatre faces triangulaires et à quatre faces qui sont des hexagones à côtés opposés parallèles. Ces dernières faces peuvent-elles être équivalentes?

15743. (Professor COCHEZ.)—Construire un triangle, connaissant la hauteur h_a , le rayon r du cercle inscrit et la somme $m_b + m_c = l$ des médianes issues de B et de C.

15744. (Professor LAUVERNAY.)—Construire deux grandeurs, connaissant la différence de leurs inverses et la somme des carrés de leurs inverses.

15745. (ALEXANDER HOLM, M.A.)—Given a, b, c the radii of three circles, and d, e, f the distances between the centres of the second and third, the third and first, and the first and second, prove that the radius of a circle which touches the given circles all externally is

$$\frac{a^2 + bm^2 + cn^2 - (b+c)mn - (c+a)nl - (a+b)lm \pm 4\Delta \sqrt{(lmn)}}{2mn + 2nl + 2lm - l^2 - m^2 - n^2},$$

where $l = d^2 - (b-c)^2$, $m = e^2 - (c-a)^2$, $n = f^2 - (a-b)^2$, and Δ = the area of the triangle whose sides are d, e, f . Deduce the radii of the other tangent circles; and, if $a = 5, b = 4, c = 6, d = 14, e = 13, f = 15$, find the radii of the eight tangent circles.

15746. (The late R. TUCKER, M.A.)—PQ is a chord of an ellipse, subtending a right angle at the vertex. Find the locus of the S.-point of the triangle PAQ.

15747. (J. L. S. HATTON.)—If

$$ax^2 + by^2 + cz^2 + 2hxy + 2gzx + 2fyz = 0$$

be the general equation of the second degree in trilinear co-ordinates, show that the necessary and sufficient condition that it should represent a circle is

$$(a + b + c - 2h \cos C - 2g \cos B - 2f \cos A)^2 + 4 \begin{vmatrix} a & h & g & \sin A \\ h & b & f & \sin B \\ g & f & c & \sin C \\ \sin A & \sin B & \sin C & 0 \end{vmatrix} = 0.$$

15748. (A. M. NESBITT, M.A.)—A, B, K are three fixed points on a tangent to a conic, and the other tangents from A and B meet in C. Any straight line through K cuts the conic in P and Q, and AQ, BP meet in R. Prove that the locus of R is a conic inscribed in the triangle ABC.

15749. (W. F. BEARD, M.A. Suggested by Question 15599.)—With the figure of Question 15599, if the tangent at P meets TQ, TQ' at K, K' and FK', F'K meet at R, prove that TR is parallel to FF'.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

9717. (R. W. D. CHRISTIE.)—Show that these two series are equal:—
 $1^n + 2^n + 3^n + \dots + n^n, \quad An + B(n-1) + C(n-2) + \dots + [n^n - (n-1)]^n.$

9743. (Professor HUDSON.)—A particle, mass m , is made to move against a frictional resistance with uniform velocity u in a circle of radius a by means of a force inclined at a constant angle α to the direction of motion. Determine the force, the resistance, the work done against resistance in any time, and the least horse power of an engine that can keep the mass moving thus.

9749. (Professor CATALAN.)—ABC étant un triangle donné, soit D le point de contact avec BC du cercle inscrit I. On projette les sommets B, C en E, F sur la bissectrice AO; puis l'on construit les parallélogrammes DEBG, DFCH. Cela posé (1) les points B, G, C, H appartiennent à une circonférence; (2) le centre de cette circonférence et le centre I du cercle inscrit sont également distants du côté BC.

10114. (Professor DÉPREZ.)—On considère toutes les coniques inscrites au triangle ABC et dont les axes ont des directions données. (1) Les foyers et les sommets décrivent des cubiques; (2) le lieu d'un point situé sur un axe de l'une des coniques à une distance constante du centre est une conique.

10133. (F. MORLEY.)—In two confocal circular cubics the point where either is cut by its asymptote is the double focus of the other.

10540. (D. BIDDLE. Suggested by Question 10488.)—A says that B and C said that ace was thrown at a single cast of a die. D and E say that F denied the occurrence. What is the probability that ace was thrown, the *a priori* probability being k and the veracity of A, ..., F being denoted by p_1, \dots, p_6 respectively?

NOTICES TO CORRESPONDENTS.

BLACKIE'S ANNOUNCEMENTS

Special Mathematical and Classical Catalogues post free on application.

Introductory Mathematics

By R. P. MORGAN.

This new work brings fresh interest to the study of mathematics by breaking down the barriers that have hitherto separated the teaching of one branch of the subject from another. It deals with the Algebra, Geometry, and Graphs a pupil must know before he can be said to have obtained an introduction to mathematics. These subjects are only treated of separately so far as is convenient. For the most part they are so handled as to enable the pupil to realize the dependence of one branch of the subject on the others, and the help that the study of the one gives in studying the others.

Where it is possible, the pupil is taught to discover rules and methods of procedure for himself by the use of instruments and otherwise.

The pupil who has worked through this book will enter on more advanced study with a knowledge of principles, methods, and practice which should ensure rapid progress. Besides, what he has learnt here he will, even if he carries the study no farther, always be able to turn to practical account. Cloth, 2s.

Graphs for Beginners

By W. JAMIESON, A.M.I.E.E.

This new and excellent little work treats of Graphs from the general point of view (rather than as a branch of pure mathematics), and will be found in every way an admirable introduction to the subject. It is designed to cover one year's course. Discontinuous Graphs are given a prominent place, especially those generally used in commercial and technical work.

The author emphasises the importance of applying the graphic methods given to the elucidation of problems in Arithmetic, Geometry, and Mensuration, and also suggests simple experiments which may be expressed graphically. 64 pages, 4to size, price 1s. 6d.

Teaching of Latin

By W. H. S. JONES, M.A.

This little book makes a timely appearance at the present moment when the relative merits of classical and scientific education are being so much discussed. The first chapter considers the claim of classical study to a unique educational value, and tries to determine the nature and extent of its peculiar contribution to education. Building on this foundation, the succeeding chapters sketch a three-years' course in Latin conceived on the lines of the latest educational thought and practice, and give many valuable suggestions as to method.

The author has himself been very successful in the teaching of Latin, and the book should prove stimulating and suggestive to the jaded teacher, while at the same time doing something to allay the suspicions of the sceptical public. Price 1s. net.

Special English and Modern Language Catalogues post free on application.

New English Texts.

Edited by Dr. W. H. D. ROUSE.

Messrs. BLACKIE & SON have commenced to issue, under the above title, a New Series of English Texts for School use. This Series will include specimens of all the acknowledged masters of English, each number being complete in itself, of a convenient size, well printed in clear type on good paper, and issued at a low price. Each book will have a brief Introduction, but no Notes.

The following are the first volumes of the Series. Price 8d. each.

Defoe's Plague Year.
Irving's Columbus.
Hawkins's Voyages.
Dickens's Christmas Carol.
Erasmus's Essays.
Essays from De Quincey.
Lamb's Essays.
Macaulay's First Chapter.
Tales from the Decameron.
Napier's Peninsular War.
North's Plutarch: Alexander.
Captain J. Smith's Virginia.
Macaulay's Second Chapter.
Gibbon's Fifty-first Chapter.
Cook's Voyages.
Perry's Voyage to the East Indies.
Raleigh's Discovery of Guiana.
Tales from Arabian Nights.

Little French Classics

"The idea is an excellent one, and admirably carried out."—Prof. SAINTSBURY.

"A considerable boon to teachers and taught."—SPECTATOR.

This New Series, which is produced under the most competent editorship, embraces all classes of French Literature—*Travels, Stories of Adventure, Scenes of Domestic Life, Essays, Letters, Poetry, and Drama*—so graduated in difficulty and so varied in matter as to be suitable for boys and girls of all ages. Many authors hitherto unobtainable in a suitable form for class reading are represented, as, for example, Bossuet, Balzac, Stendhal, Rousseau, and Pascal.

The volumes have already found their way into constant use in most of the leading Schools in this country, and Examining Bodies, both at home and in the colonies, are prescribing the books for study during the coming year. Price 4d. each book.

Complete List on application.

German Exercises

By Prof. H. G. ATKINS, M.A.

This new and highly useful volume of exercises has been prepared in response to repeated demands for suitable material to accompany the well known *Skeleton German Grammar*. At the same time the Exercises are complete in themselves, and suitable for independent use.

Each page contains two passages, one in German and one in English, dealing with the same subject-matter and using the same vocabulary, and in the first twenty exercises the English is given in German order. The grammatical points are taken up in the order of the *Skeleton Grammar*, a page being given to each where it seemed advisable. In subject-matter, after the first few exercises, Germany and things German receive the chief share of attention, while the Poems included are characteristically German.

Complete German-English and English-German Vocabularies are provided.

A Skeleton German Grammar. By Prof. ATKINS. Printed in red and black, 1s. 6d.

A Skeleton French Grammar. By Prof. ATKINS. Printed in red and black, 1s. 6d.

LONGMANS, GREEN, & CO., 39 PATERNOSTER ROW, LONDON, E.C.

FROM MR. MURRAY'S LIST.

Just Published.

MURRAY'S

Crown 8vo, 3s.

School History of England.

An Outline History for Middle Forms.

FROM THE EARLIEST TIMES TO THE ACCESSION OF KING EDWARD VII.

By **M. A. TUCKER,**

Formerly Marion Kennedy Student at Newnham College, Cambridge; History Mistress at St. Felix School, Southwold.

With many Coloured and other Maps, Plans, Tables, &c. Crown 8vo, 3s.

This book has been written in the hope of supplying the want, felt by many teachers, of a text-book which shall be accurate in point of fact and at the same time full of human interest.

It is intended for students in the middle forms of schools, from twelve to sixteen years of age; and, while it contains all that is necessary from the point of view of junior examinations, it is hoped that it will succeed in stimulating the pupil to still further efforts in historical study.

Special care has been taken in the production of the volume. The type used is particularly legible and the binding is both serviceable and attractive, while the many excellent maps, plans, genealogical tables, &c., add to the practical utility of the work.

PRACTICAL ARITHMETIC.

An Introduction to Elementary Mathematics. For Scholars between the ages of 9 and 12. By A. CONSTERDINE, M.A., and S. O. ANDREW, M.A., Head Master of Whitgift Grammar School, Croydon. Fcap. 8vo. Complete, 2s.; or in Two Parts, 1s. each. Edition with Answers (for Teachers only), 2s. 6d.

PRACTICAL MATHEMATICS.

By A. CONSTERDINE and A. BARNES.

This book will form a companion volume to PRACTICAL ARITHMETIC, and will be specially suitable for students in Evening Schools. It will be published this month.

CLASSICAL ATLAS.

For Schools. Edited by G. B. GRUNDY, M.A., D.Litt. Folio (14 $\frac{1}{4}$ by 9 $\frac{3}{4}$ ins.), price 6s. Consisting of Fourteen Sheets (containing Thirty-eight Maps and Plans), with a Complete Index of 19 pages.

"... Will undoubtedly supersede atlases now in use among schoolboys and undergraduates. It is well bound and cheap at six shillings, but, better than this, it is clearer and more legible than any similar atlas we have seen. . . . The whole is excellently edited and produced."—*Athenæum*.

HISTORY OF ENGLAND.

Part I.: From the Earliest Times to the Close of the Middle Ages. By C. R. L. FLETCHER, M.A. With Coloured Maps, Plans, &c. Demy 8vo, 7s. 6d.

"If it were possible, his book ought, I think, to persuade boys that history, like philosophy, is 'not harsh and crabbed as dull fools suppose,' but one of the most fascinating studies conceivable. Mr. Fletcher's venture is certainly very far from being dull. . . . Nothing could be more stimulating, more provocative of interest than his method."—*Westminster Gazette*.

VOLUMETRIC ANALYSIS.

By J. B. RUSSELL, B.Sc. Lond., and A. H. BELL, B.Sc. Revised and Enlarged Edition. Crown 8vo, 2s.

Concise directions and calculations are special features of this book. In the New Edition additional matter has been added on: The Standardization of Acids by means of Sodium; Chalk; Borax, &c.; Potassium Bichromate; Iodine; Thiosulphate; and Silver Nitrate.

ENGLISH GRAMMAR.

WITH HISTORICAL INTRODUCTION AND COPIOUS EXERCISES.. By T. D. HALL, M.A. Third Edition, Revised and Enlarged. Crown 8vo, 2s. 6d.

The New Edition has been thoroughly revised and brought up to date. The chapters on the classification of languages, sound shifting, and the historical development of English have been entirely rewritten, and embody the most recent philological discoveries. The whole text has been reset in a clear and striking type.

THE LIFE OF CHRIST.

A Continuous Narrative in the words of the Authorized Version of the Four Gospels. WITH INTRODUCTION AND NOTES. By J. J. SCOTT, M.A., Canon of Manchester. With Two Maps. Demy 8vo, 7s. 6d.

PRACTICAL SCIENCE.

A Further Course: Mechanics, Hydrostatics, and Heat. By J. H. LEONARD, B.Sc., and W. H. SALMON, B.Sc. With Illustrations. Fcap. 8vo, 2s.

"This volume continues the scheme of instruction so admirably inaugurated in Mr. Leonard's 'First Course of Practical Science.' . . . The book is one of great merit, and can be confidently recommended."—*Publishers' Circular*.

DR. CORNWELL'S SCHOOL BOOKS

Edited by J. CORNWELL ROUND, M.R.C.S.

With numerous Revisions and Additions by BEN JONSON.

THE YOUNG COMPOSER. Forty-ninth Revised Enlarged Edition. Contains Sections on the Composition of Sentences, Paragraphs, Essays, Précis, Letters, Telegrams, and Commercial Documents, also on "Press Corrections." 1s. 5d.

"The book is complete and practical."—*School Guardian*, October, 1904.

"Altogether the book is a very valuable aid for those who wish to gain the power to write clearly, accurately, and gracefully."—*School Manager*, October, 1904.

A SCHOOL GEOGRAPHY. Ninetieth (Memorial) Edition. With Coloured, Black-and-White, and Star Maps; also numerous Diagrams. The Reviser has brought this book thoroughly up to date, and it now contains 384 pages, exclusive of 64 pages of Maps. 3s. 6d.

"The book is an immense storehouse of accurate geographical information, and a very suggestive book to the teacher."—*Educational Record*, June, 1904.

"Seeing that it has thirty-six coloured Maps, and nearly twice as many uncoloured, the price is wonderfully low."—*Journal of Education*, July, 1904.

GEOGRAPHY FOR BEGINNERS. Seventieth Edition. Has been Enlarged and Revised, Maps and Diagrams having been also added. It now contains 160 pages of interesting matter. 1s.

"We have tested both these books on many points, and in every case with the most satisfactory results."—*School Guardian*, May, 1904.

Cambridge University Press.

NOW READY. A NEW TRIGONOMETRY BY PROFESSOR LONEY.
Intended for the use of Students commencing Trigonometry.

THE ELEMENTS OF TRIGONOMETRY. By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College (University of London). Extra fcap. 8vo, 3s. 6d.

Elementary Geometry, Practical and Theoretical. By C. GODFREY, M.A., Senior Mathematical Master at Winchester College, and A. W. SIDONS, M.A., Assistant Master at Harrow School. Large crown 8vo, pages xii-356.

- (1) Complete in One Volume, price 3s. 6d.
- (2) In Two Volumes:—Vol. I. (Experimental Course, and Books I. and II.), 2s.; Vol. II. (Books III. and IV.), 2s.
- (3) In Five Parts:—Part I. (Experimental Geometry), 1s.; Part II., Theoretical Geometry (Book I.), 1s.; Part II., Book II., 1s.; Part II., Book III., 1s.; Part II., Book IV., 1s.

ANSWERS TO THE EXAMPLES, price 4d., post free.

Solutions to the Exercises. By E. A. PRICE, B.A. Crown 8vo, 5s. net.

The Cambridge Biological Series.

General Editor—ARTHUR E. SHIPLEY, M.A., F.R.S.

The Natural History of some Common Animals. By OSWALD H. LATTER, M.A., Senior Science Master of Charterhouse. Crown 8vo, 5s. net.

A Manual and Dictionary of the Flowering Plants and Ferns. By J. C. WILLIS, M.A., Director of the Royal Botanic Gardens, Ceylon. Second Edition, Revised and Rearranged. In One Volume. Crown 8vo, 10s. 6d.

Trees. A Handbook of Forest Botany for the Woodlands and the Laboratory. By H. MARSHALL WARD, D.Sc., F.R.S., Professor of Botany in the University of Cambridge. Vol. I. BUDS and TWIGGS; Vol. II. LEAVES. With numerous Illustrations. Crown 8vo, 4s. 6d. net each.

(To be completed in Six Volumes:—III. INFLORESCENCES and FLOWERS. IV. FRUITS and SEEDS. V. SEEDLINGS. VI. GENERAL CHARACTERS.)

Grasses. A Handbook for use in the Field and Laboratory. By H. MARSHALL WARD, D.Sc., F.R.S. With 81 Figures. Crown 8vo, 6s.

The Elements of Botany. By FRANCIS DARWIN, M.A., M.B., F.R.S. With 94 Illustrations. Second Edition. Crown 8vo, 4s. 6d.

Practical Physiology of Plants. By FRANCIS DARWIN, M.A., F.R.S., and E. HAMILTON ACTON, M.A. Crown 8vo. With 45 Illustrations. Second Edition. 4s. 6d.

CAMBRIDGE LOCAL EXAMINATIONS, DECEMBER, 1905.

THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

TWELFTH NIGHT. With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A. Seventh Edition. 1s. 6d.
Journal of Education.—"The best school edition of the play that has come under our notice."
Athenæum.—"A model of how a play of Shakespeare should be prepared so as to attract and not to repel young students."

THE PITT PRESS SERIES AND CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

ENGLISH GRAMMAR.

THE ELEMENTS OF ENGLISH GRAMMAR. By A. S. WEST, M.A., Trinity College, Cambridge. New and Enlarged Edition. Seventieth to Eighty-fifth Thousand. Extra fcap. 8vo, 2s. 6d.

Guardian.—"It is far and away the best of its class hitherto published for boys of thirteen to sixteen years of age, and, if we mistake not, will soon become a standard text in secondary schools and mark a new epoch in the teaching of English grammar."

AN ENGLISH GRAMMAR FOR BEGINNERS. By the same Author. Seventy-sixth to One Hundredth Thousand. 1s.

Schoolmaster.—"It is a capital little work which we can heartily recommend."

A Key to the Questions contained in West's Elements of English Grammar and English Grammar for Beginners. By A. S. WEST, M.A. 3s. 6d. net.

A Book of English Poetry for the Young. Arranged for Preparatory and Elementary Schools by W. H. WOODWARD, Professor of Education in the University of Liverpool. 2s.

A Second Book of English Poetry for the Young. Arranged for Secondary and High Schools by Prof. W. H. WOODWARD. 2s.

Desiderius Erasmus concerning the Aim and Method of Education. By W. H. WOODWARD. Crown 8vo, 4s. net.

The Making of Character: some Educational Aspects of Ethics. By JOHN MACCUNN, M.A., LL.D., Professor of Philosophy in University College, Liverpool. Crown 8vo, 2s. 6d., cloth extra; gilt top, 3s. 6d.

The Education of the Young, in the "Republic" of Plato. Translated into English, with Notes and Introduction, by BERNARD BOSANQUET, M.A., LL.D. Crown 8vo, 2s. 6d.

Aristotle on Education, being extracts from the Ethics and Politics Translated and Edited by JOHN BURNET, Professor of Greek in the United College of St. Salvator and St. Leonard, St. Andrews. Crown 8vo, 2s. 6d.

Guardian.—"In this unassuming little volume Prof. Burnet has performed a real service for students of pedagogics. His book should be read by them as a companion and sequel to Prof. Bosanquet's on Education in the Republic of Plato."

The Educational Times.

Notes on History. THERE is probably no more troublesome subject in the curriculum than history. From time to time we have had occasion to indicate, in studiously restrained terms, our dissatisfaction with historical presentations in current literature of one form or another; and during the past month there has been a concurrence of half a dozen events pressing upon attention various aspects of the subject. History is opposed to fiction: it is meant to be a narrative of facts, not of imaginary incidents. History is a practical thing: it has direct bearings on the conduct of current affairs. In his general preface to "The Cambridge Historical Series," which is "intended for the use of all persons anxious to understand the nature of existing political conditions," Dr. Prothero points out most justly that "the roots of the present lie deep in the past," and the real significance of contemporary events cannot be grasped unless the historical causes which have led to them are known. The necessity for accurate statement of facts, and of all the essential facts in due relation, requires no argument. A no less urgent necessity is intimately connected with this—the necessity for just inference and explanation; and this implies the exclusion of bias, as far as may be—a difficulty of the most insidious, formidable, and fatal nature. We are not looking for perfection. "Ultimate history cannot be obtained in this generation," the editors of "The Cambridge Modern History" frankly and necessarily admit, "but," they go on to say, "so far as documentary evidence is at command, conventional history can be discarded, and the point can be shown that has been reached on the road from the one to the other." While it is unreasonable and unjust to make impracticable demands, it is a matter of duty to censure the persistence of "conventional history" in the face of established and notorious facts.

The disturbing element of bias is most commonly due to patriotic feeling or hero-worship, and appears mostly in the narrative of more recent events. We put it aside with mere mention, because it is waste of time to reason where there is no chance that reason will be heard, and we wish to keep clear of political discussion. In the earlier parts of British history, where the authorities are chroniclers, there

is the constant danger of failing to discriminate between fact and inference, so that the uninstructed inferences of a monkish scribe may readily enough be perpetuated as positive facts. Examples might easily be given, but we wish in the meantime to confine ourselves to the very simplest order of considerations, as illustrated in common text-books issued by publishers of high rank. Elsewhere we comment on the treatment of the earlier British relations with China, and of the modern conflicts between Norway and Sweden, by writers of eminence in a first-class series of historical manuals. Lower down in the educational scale, still more surprising things are only too much in evidence. One reputable historical "reader" states that King John "signed" the Charter, and impresses the information by a picture showing John seated at a table with the Charter before him and turning to a baron to receive a quill, which the baron is holding out to him—a venerable blunder exhibited also in a popular history of far higher pretensions. The figures of old chroniclers are always to be distrusted, as of course; yet, in the face of Mr. Joseph Bain's analysis, the same "reader" repeats the ancient extravagant numbers of the armies at Bannockburn. A collateral book of biographies, generally illustrative and stimulating, records: "and now Sir Frederick Roberts set out on the great march which made his name famous—the wonderful march from Cabul to Candahar." This is not blank ignorance, however; the statement may pass as a glowing account of the particular achievement by itself. But it will create a false historical impression if the pupil knows nothing of the still greater and more wonderful march of Sir Donald M. Stewart, immediately before, from Candahar to Cabul, and of the very special assistance that Stewart rendered to Roberts (as Lord Roberts himself properly acknowledges). The same writer, however, is capable of describing the Carnatic as "the western part of India"; nay, he even informs his readers that Delhi is "at the point where the Jumna joins the Ganges." It seems impracticable to tell the story of the Black Hole of Calcutta in historical terms. Different "readers" give different versions of the last words of Nelson. And so on. Of course, one cannot expect that the writers of elementary or popular histories should be abreast of historical research, much less that they should know the original authorities, and still less that they should abstain

from picturesque embroideries; but, after all, they ought to be familiar with the best secondary guides, and it is time that gross blunders should be excluded from books prepared for use in colleges and schools.

History is just as difficult, and as instructive, as the teacher chooses, and is able, to make it. Beginning with biography and episodes, it passes eventually into the region of political science. The "drum and trumpet" variety—by no means unimportant, so far as it went—may be said to have passed away with the advent of Green's wider exposition of the elements of the social side of the life of a people; and now Prof. Wrong, of Toronto, comes forward to explain that Green's work was too narrow in scope, and to exemplify a wider basis of national development. Meantime the gradation of teaching material has been undergoing definition (especially in America)—a most important matter indeed, for not only is the subject wide, but the history of a nation involves so many ideas that take just shape in the pupil's mind only very slowly and with widening experience of the things around him, and it requires alert self-questioning on the part of the teacher to keep his explanations within the capacity of his pupil's mind at the moment. Dynasties and kings and rows of dates are sometimes denounced as severe trials to young learners. Much depends upon how they are taught: in any case, without such definite landmarks there can be no history. So with the relations of cause and effect: these are mostly difficult to explore, and they are often dry and possibly far removed from anything in the experience of the pupil; but they are the very essence of history. In the higher forms, where the physical conditions and the various activities of a community can be intelligently grasped—geographical peculiarities, the social texture, the industry and commerce, the political and administrative systems, &c.—the subject may expand into an instrument of training of the most valuable character, both theoretical and practical. But the best results imply much forethought in graduation and co-ordination.

If we may venture into the higher spheres where a student may achieve a university degree in History—an Honours degree too—we may express our gratification that the Oxford tutors and lecturers in modern history have begun to reason with Prof. Firth on the caustic criticisms of his inaugural lecture, and in a spirit of cordial sympathy with his aims. The acquisition of a certain amount of historical knowledge is one thing, indeed, and the training of the professional historian is a very different thing. The first is the object of the majority of the students, but we hardly expect that Prof. Firth will admit that it is sufficient for an "education" in history, or for an Honours degree. Not merely the few that attempt the Stanhope or other prize essays, but also such as aspire to a First or a Second Class, ought to have the experience of tracking out the history of a short period, or of an episode, in the more important at least of the original authorities. A term's work at this sort of exploration would be worth more than all their other terms together spent upon the assimilation of results ready to hand in text-books and lectures. Without such experience, it is absurd to fancy that one has begun to understand the meaning of history, or to be competent to teach it to good purpose in the higher grades.

NOTES.

THE attack on Little-Go Greek for science candidates has been repulsed by 3 to 2. Cambridge still keeps step with Oxford, and the champions of Greek for everybody again breathe freely—for a time. There can be no doubt whatever that the campaign will go on, and that the combatants will have to try conclusions again. Meantime the Grecians have a further opportunity of promoting more economical and attractive methods of teaching elementary Greek—the sole expedient that can save the situation. The strength and character of the minority are sufficiently significant.

WE are not surprised at the widely illogical principles of the defence that has proved successful: in such cases, elastic logic is of course. Nor do we think it fair to gird at the country contingent that turned the tide of battle: graduates living in the country need not be any more inappreciative of the merits of the case than dons in active academic service. The exaggerated Greek bias, conscious or unconscious, has got to be reasoned and voted down into practical innocuousness. What but the ballot-box can deal with such a view as the Rev. W. C. Green—an excellent Greek scholar—sets out in a delightful (one-sided) dialogue between Sir Henry Savile and Sir Henry Wotton in the interesting March issue of the *Preparatory Schools Review*? The underlying assumption is that the world has actually stood still since the days of these worthy scholars and gentlemen. "A grave danger," says Wotton, "threatens all theology, nay, all religion, if its oracles, written in Greek, come to be understood by fewer and fewer." If Mr. Green really thinks that the compulsion of science students to plod through some elementary Greek is an indispensable prop of religion, we would recommend him to read Prof. Osler's recent Ingersoll Lecture. Greekless students, forsooth, "can have honourable colleges or universities of their own." They can, indeed; and we hope Oxford and Cambridge will appreciate the practical side of the argument. We are all for as wide and general a training as can be exacted; but that the greatest Universities of the country, bound in duty to foster all subjects to the utmost, should exclude aspirants in any one subject because of even the blindest ignorance in any other (or any other dozen) distantly related subjects does seem to us an amazing proposition. It opens out an argument that is enough to ensure the catastrophe that it is piously intended to avert.

ONE fortunate result of the stirring of the Greek waters has been the opportune republication, in pamphlet form (David Nutt), of the paper on "The Teaching of Modern Languages" by Mr. H. W. Eve which originally appeared some three or four years ago in "National Education—a Symposium" (John Murray). The article naturally attracted much attention at the time; and, after all the controversial columns of the *Times* and the disputatious exercises of academic circles have spent their force, it stands out as the most complete, candid, fruitful discussion of the relative value of classics and modern languages in the school and

college curriculum, as well as a permanently valuable exposition and criticism of methods of modern language teaching. Mr. Eve, who has a universally acknowledged claim to speak authoritatively on both sides of the present dispute, concludes "that in modern languages there is an instrument available for securing to the majority of boys and girls in secondary schools intellectual discipline and culture, inferior, no doubt, to what the few derive from their classical training, but real and complete so far as it goes." The concessions and the limitations of statement may cause disappointment or delight to enthusiasts in the opposite camps; but the proposition meets the case amply, and the supporting details are set out with steady allegiance to the facts. Teachers of modern languages will find the criticism of methods rewarding. The remarks on the training of teachers of modern languages properly demand a high standard of culture. We trust the essay will be widely read and pondered.

THE presentation of a testimonial to Dr. R. P. Scott on his appointment to a staff inspectorship of the Board of Education was a just recognition of the important and unwearied services he has rendered to educational progress and organization, especially in secondary schools, in connexion with numerous educational societies and agencies, from which his new position formally cuts him off. How wide was the professional interest in the occasion is certified by the fact that the Committee of promoters included members (in some cases formally appointed representatives) of the Head Masters' Association, the College of Preceptors, the Head Mistresses' Association, the Assistant Masters' Association, the Assistant Mistresses' Association, the Private Schools Association, the Association of Head Masters of Preparatory Schools, the Association of Technical Institutions, and the Joint Scholarships Board, while letters of sympathy came from the Association of Directors and Secretaries for Education and from the Conference of Catholic Schools. Practically it was a national demonstration. Canon Bell, the Chairman of the Committee, wrote:

The work of Dr. Scott on behalf of secondary education has been for many years past of exceptional range, importance, and value. He has been Head Master of Parmiter's School, Chairman of the Teachers' Registration Council, the virtual founder of the Incorporated Association of Head Masters, and its honorary secretary from its inception, the originator of the Joint Scholarships Board, and a member of the Council of the College of Preceptors. He has further contributed by his counsel and sympathy to the work of associations other than those with which he has been officially connected; and the improved position of secondary education is due in no small measure to his able advocacy of its claims on the attention of the Government and the public.

Behind these summary indications lies a long and devoted spell of work, the best possible preparation for Dr. Scott's new duties. We hope that Dr. Scott will long be enabled to continue his beneficent labours for the wise progress of secondary education.

THE Committee of the Classical Association of England and Wales appointed to consider the spelling and printing of Latin texts has circulated a series of inquiries for the opinion of teachers. The inquiries appeal partly to personal experience, partly to personal judgment. The question of the marking of long vowels in Latin texts for beginners

has received an impulse here from the consistent usage of American editors in grammars, texts, and vocabularies. The practice may help to guard against a bad form of blunder likely enough to occur in the first year or two of study, but it raises the question of crutches. At any rate, the value of it seems a reasonable subject of inquiry on grounds of actual experience. The writing of the consonants or semi-vowels *i* (*j*) and *u* (*v*), however, is more doubtful. Is it a proper question to submit to a plebiscite? "Do you wish to see *j* restored for use in school books? or Would you prefer to see an italic *i* or the like (e.g., *i*) employed instead"? Surely the introduction of such symbols as *i*, *u*, or italic letters, is intolerable; and, if they are considered necessary, the proper place for them is in a phonetic section, and not in the text. The question appears to be, not a matter of preference at all, but a matter of scholarship purely. The better teaching of Latin does not depend upon mechanical devices of this sort.

THE new Scotch Education Bill is substantially the same as last year's Bill, with modifications mainly due to the debate on the first thirty clauses in Committee, partly to outside criticism. The Local Education Authority is a School Board, elected *ad hoc*, the unit of administrative area being the county district. Boards may pay scholars' travelling expenses in outlying places, provide books, &c., and institute bursaries tenable at more advanced schools or at universities. Rate aid to voluntary schools is again placed at their option; and the *Catholic Observer* (Glasgow) says that "a reasonable and sensible *modus operandi* would be to authorize or direct the School Boards to pay an adequate subvention from the rates to all schools which give efficient teaching in secular subjects by properly qualified teachers in premises and under conditions satisfactory to the Education Department." One of the chief alterations is in the rating clauses: expenditure on maintenance is spread over the whole district area; so is capital expenditure on the "Higher Class Schools"; but capital expenditure already incurred on provision and equipment of ordinary public (including higher-grade) schools remains a charge on the parish that incurred it, and future capital expenditure on such schools will be borne by such parish or parishes of the educational district as share in the school accommodation provided. The rate is assessed, not on the population, but on the valuation. Four Provincial Councils are established in connexion with the four universities:

Each Provincial Council shall include members of the *Senatus Academicus* of one or more of the Universities aforesaid, and representatives of the School Boards, and of the governing bodies of the central institutions other than Universities within the province, and the more important schools within the province which are not under the charge of a School Board and in which efficient higher education is given, and shall also include persons actively engaged in teaching in schools within the province.

The provision that these Councils may form a Joint Committee for deliberation and consultation will ensure co-ordination and smooth working; the *Educational News* says "it offers the nucleus of a National Education Council."

At the first annual meeting of the Association of London Secondary, Art, and Technological Teachers (March 11), the title of the body was altered to "The Federation of London Teachers," the previous title remaining as sub-title.

SUMMARY OF THE MONTH.

THE *Church Family Newspaper* (March 3) reports an interview with Dr. Gow. The following points may be usefully considered:—

I don't believe in compulsory Greek, but neither do I believe in any of the substitutes that are proposed for it. The whole system of modern education wants altering from top to bottom. Changing one subject at the time, as educators have been doing, merely has the effect of knocking all the hard subjects out. Thus, in the London Matriculation Examination, German has been nearly extinguished by having been made optional with French. Latin is now taken by only half of the candidates, and on the Army side of public schools it is being dropped out altogether. It is likely that, under present conditions, if Greek ceased to be compulsory, it would fall out of the curriculum of most schools. Analogous instances show this. In the Oxford and Cambridge Local Examinations only 9 per cent. of the candidates (more than half of them girls) take German. And remember that the Oxford and Cambridge Locals comprise about 20,000 scholars between the ages of fourteen and eighteen. In the Oxford Locals (Juniors) for 1905 out of 5,938 candidates only 524—less than 9 per cent.—took German. In the Cambridge Locals in 1896 out of 8,321 candidates 3,791 (45 per cent.) took Latin. In 1903 out of 8,327 candidates only 2,848 took up this subject. In the Cambridge Senior Locals in 1896 out of 2,168 candidates German was taken by 477; but in 1903, out of 2,823 only 340 took it. At the London Matriculation in 1902 only 162 took German out of a total of 5,050. You see that these single options tend to kill hard subjects.

My point, then, is that the universities ought to take care, as the Germans do, that a boy has had a proper all-round training before he goes to the university. And they don't take this care. There is scarcely a subject offered at the preliminary examination which cannot be crammed in precisely the same way as Greek is crammed in many schools. The universities should be divided into faculties, as the German universities are, and each of these faculties should have its appropriate preliminary training. At school boys are differentiated right enough, but the university entrance examination is of a trumpery character for a lad of nineteen. It does not represent, and cannot be made to represent under present conditions, a liberal education of any kind.

It may be useful to put on record the conclusions of Principal Griffiths on compulsory subjects:

Compulsion is, undoubtedly, a necessary portion of school education; for it is not only in his studies that the boy has to be kept under control. When he passes to the university, however, he should find that the atmosphere has changed and that the object aimed at by a university curriculum is the development of his natural gifts rather than the infliction of what may possibly be distasteful studies. As one who has been not only a student, but also a teacher, of natural science, I should be extremely unwilling to advocate the inclusion of natural science as a compulsory subject in a university course. Whatever harm may be inflicted by the study of compulsory Greek would, to my mind, also be inflicted by the study of compulsory science. Absolute freedom of choice is, I suppose, an impossibility under present conditions. Nevertheless, I trust that the University of Cambridge, instead of riveting the bonds which retard the progress of education in this country, will refuse to continue or impose any restriction upon intellectual activity unless the evidence in favour of such restriction is so decisive, so overwhelming, as to more than compensate for the evils which are inevitably attendant on any system of mental compulsion.

THE first Herbert Spencer Lecture, established by Pandit Shyamaji Krishnavarma, of Balliol College, was delivered at Oxford (March 9) by Mr. Frederic Harrison. There was a large attendance, including many leading members of the University. Mr. Harrison said it was the business of philosophy to compare and to reconcile different points of view. They could all admire the tenacious devotion to duty, the patience and courage with which Spencer for forty years carried on his vast undertaking, in spite of ill-health, many obstacles, and much discouragement. But at last, at his death, the civilized world, the East and the West, Europe and America, looked up to him as the most eminent thinker of this country. Whether his system were ever accepted or not, the attempt to frame a synthesis of the sciences so as to arrest the attention of the world was a task so very rare, so supremely difficult, that it was deserving of honour. A co-ordination of knowledge might prove to be abortive, and yet might be a landmark of thought and a monument of genius. Philosophy, like poetry itself, could do nothing abiding without the synthetic imagination. Philosophy implied ultimate generalization. There was an insatiable craving in the human mind for some coherent system of thought. And this accounted for

the reverberation through the civilized world of the name of Spencer, whose books were read and translated in every European country, in India, in China, and in Japan. It was a different question if Spencer's system would endure and command assent in the future. That there underlay the "Synthetic Philosophy" dominant conceptions of vast scope and power was undoubted. But, in attempting an absolute generalization of all the phenomena of the Universe, it was usually held that the scheme was too ambitious. It was a disaster that Spencer was unable to complete his scheme for the inorganic sciences. His system leapt from First Principles and Laws of Evolution to Biology, Psychology, and Sociology. He did not explain how evolution could be applied to astronomy, physics, and chemistry. A systematic treatment of these sciences would probably have compelled him to supplement his theory of evolution by other laws. Every science had its statics, as well as its dynamics, and especially the sciences relating to society, to ethics, and to religion. Science was not limited to the study and theory of origins only. A still more singular *lacuna* in the synthetic system was the omission of any theory of general history. For all these reasons, the synthetic system still awaited development and correction before it could conquer general assent. But its conception was so grand, its learning so wide, its suggestions so fertile, its lofty moral aim so noble that it would long do honour to our nation and our age.

PROF. SIR EDWARD ELGAR delivered his inaugural lecture (March 15) on "A Future for English Music." He said that the living art of music consisted not only of composers, but also of executants; and, he would dare to add, critics. Those three factors should have a definite action one upon another for an advance of music. During the twenty years following 1880 the whole atmosphere of English music had changed owing to the spread of musical education. It was saddening to find that after all the endeavour to excite enthusiasm for English music—big music—they had inherited an art which had no hold upon the affections of the people, and was held in no respect abroad. He ascribed the want of vitality in the works produced during that period to the fact that English composers too frequently wrote their works as if for an audience of musicians only. Therefore those works had been correct, and necessarily cold. The young England school was against mere imitation, and no one who lived in the world of music in England to-day could help feeling that something was moving. This movement, he believed, at last came from within. It was no longer necessary for the young man of the present day to pose: he only needed to be himself; and, if his personality was worth anything, he would be accepted, and his work. Discussing possible developments in musical education in Birmingham, he foreshadowed the teaching of harmony in almost the earliest stages horizontally, and not perpendicularly. A system was being formulated by which the student should at once learn the value of one chord in relation to what followed it or what preceded it, instead of learning simply from a catalogue and knowing its constituent notes. That system might revolutionize the teaching of harmony. He warned exuberant young spirits not to expect any sympathy from him in anything that savoured of disrespect to any of the older institutions to which in the past the country had owed so much and to which in future it looked for further help and enlightenment. Speaking of some weaknesses of the juvenile composers of to-day, he described as pitiful the anæmic flowers of the modern French school. He held that the younger men should draw their inspiration more from their own country, from their own literature, and, in spite of what many would say, from their own climate: only by drawing from real English inspiration would they ever arrive at an English art. He did not intend to recommend at present that degrees should be given in the University. That might come later. To obtain a degree, residence in the University would be absolutely necessary; a good library was needed, and something must be done to make the orchestral concerts a permanent institution. The future of music which he wanted to see coming into being was something that should grow out of English soil—something broad, noble, chivalrous, healthy, and, above all, an out-of-door sort of spirit. To arrive at that it would be necessary to throw over all imitation.

At a general meeting of the Classical Association of Scotland, held at Aberdeen (March 11), Prof. G. G. Ramsay, Glasgow, advocated the teaching of classics in all country schools which had no higher school within reach, so that pupils might have the

chance of beginning long before twelve years of age the higher university subjects. We give the substance of his address elsewhere. Prof. A. W. Mair, Edinburgh, dealing with the teaching of Greek, said that the attack on compulsory Greek at Cambridge had been triumphantly repelled, but no one knew when the attack would be renewed. If reform was to come, as come it must, it was from the universities that it must come. Examination papers ought to encourage more practical and interesting methods. Nothing was to be gained by cast-iron methods of teaching. The rigidity of the present system was its greatest bane. He strongly pleaded for originality in the teachers, even although the originality might tremble on the brink of eccentricity. Prof. Mair showed how valuable time was wasted in teaching useless rules and exceptions to rules in the Greek grammar. Prof. Harrower, Aberdeen, and Prof. Burnett, St. Andrews, among others, expressed sympathy with Prof. Mair's views.

THE annual meeting of the Private Schools Association was held at the College of Preceptors (March 3 and 4). The report stated that there were fifty Branches, with 1,360 members. Sir Henry Kimber, M.P., who was elected President, said in his inaugural address that the private schools were very much underrated, and had not received anything like adequate recognition at the hands of the Legislature. The Association had a serious problem before them. The Authorities had told them that the only way to obtain their ends was by legislation. He did not believe that further legislation was necessary if the County Council on the one hand, and the Board of Education on the other hand, would carry out the relative clause of the Bill. The duty of the Local Authorities was to take into consideration those who had done so well for the people in the past. He had not ceased to impress upon Sir William Anson the case of the private schools. Importunity was what was required. They should sit at the doors of the Local Authorities until they not only listened but acted. It was a long and wearying business, but it must be done. It should be put clearly before Parliament that over ten thousand institutions were being thrown out of existence by the competition now going on. A petition, giving full particulars, should be prepared on the subject. He had often tried to get out of Sir William Anson what was the reason that no grants were given to private schools, but he had failed. Legislation was a very poor look-out.

On the question of a Secondary Teachers' College, Mr. W. W. Kelland moved: "That no scheme could be held to be satisfactory that does not place all efficient schools alike, whether public or private, on terms of perfect equality." There was no question of amalgamation; it was a matter of confederation. They should be equally independent bodies; they should meet together on a common ground, and bring their united influence to bear on public bodies. Dr. Sibly seconded, and the motion was carried. Mr. Kelland next moved, "that the administration of the proposed college should be carried on by a Council consisting of an equal number of representatives of each confederate body, and of a number of members co-opted by the whole college." He said that it was suggested that the Council should consist of six trustees appointed by the college. Each confederate body would have three representatives, and twelve would be elected members. The College of Preceptors would come under the federation. Negotiations were going on with the Head Masters' Conference, the Incorporated Association of Head Masters, the Association of Head Mistresses, the Private Schools Association, the Proprietary Schools Association, the Incorporated Association of Assistant Masters, and the Assistant Mistresses' Association. The Teachers' Guild was approached, but had declined to join. Dr. Reddie, of Abbotsholme, strongly opposed the proposal. In the course of discussion it was suggested that the association should be more numerously represented on the proposed Council; but, on the other hand, it was pointed out that the College of Preceptors and other associations represented private schools, and that this would add considerably to the private school representation. An amendment proposing that an "agreed" number of representatives should be appointed, instead of an "equal" number, was accepted, and the motion as thus altered was carried. It was also decided that the annual payment of all persons not members of a confederate body should be not less than one guinea; that, whatever the educational qualifications imposed by the proposed college might be, a sufficient time should be allowed for the admission of teachers not possessing these qualifications; and that such educational qualifications should not be imposed unless unanimously accepted by representatives of the

federating associations. Mr. H. R. Beasley read a paper discussing the relations of private schools and the Local Education Authorities.

At a meeting of the London Teachers' Association at the Memorial Hall (March 11), Mr. Bunting (Vice-President) moved the adoption of a report by the General Committee on the subject of higher education. The Committee recommended that higher schools, as distinct from the usual type of secondary school, should form an integral part of the primary system of education; that these schools should be organized to give a complete four years' course of instruction on an extended curriculum; that selection for the higher schools should be considered equivalent to obtaining a scholarship; and that the maintenance allowance as laid down in the new L.C.C. scholarship scheme be granted to scholars at higher schools. Mr. Bunting said the Committee were not yet prepared with a detailed scheme—they simply asked the Association to affirm the principle. The recommendations were adopted.

THE Committee appointed to consider the allocation of the increased grant in aid of education of a University standard in arts and science has finished its inquiry. Excluding £9,000 to be allotted later in the financial year, the Committee proposes that the sum of £45,000 (making a total grant of £54,000) be allotted as follows:—Manchester, £6,000; University College, London, £5,000; Liverpool, £5,000; Birmingham, £4,500; Leeds, £4,000; King's College, London, £3,900; Newcastle-on-Tyne, £3,000; Nottingham, £2,900; Sheffield, £2,300; Bedford College, London, £2,000; Bristol, £2,000; Reading, £1,700; Southampton, £1,700; Dundee, £1,000. The Committee expresses the view that the time has come for making a new departure in the principle on which State assistance is to be given to the highest education. It is recommended that a moderate sum should be set aside for distribution by way of payment to post-graduate students from the university colleges who devote themselves for one, two, or three years to special problems; and that to ensure the money being applied most efficiently to the stimulation of individual study, as distinguished from the general purposes of the college, to the development of which other sums out of the grant are directed, the distribution should assume the form of a grant made directly to the student on the advice of some impartial authority. Another portion of the money might, the Committee thinks, be very well devoted to remedying equipment in books and scientific apparatus; while a third head, under which the Committee recommends that Treasury assistance should be given, is the increase of the salaries of certain of the existing teachers. The Committee are impressed with the inadequacy of the remuneration of the professors and teachers in some of the colleges. This is especially the case with the assistants. It is also suggested that the grant in aid should in future be made to a committee, instead of to the colleges direct, and that this committee should make an annual report to the Treasury, to be laid before Parliament. In conclusion, the Committee urges the necessity of leaving to the advisory committee discretion to deal with particular circumstances as they arise.

OXFORD CONVOCATION has passed a statute (March 14) amending an old statute so that henceforth it will not be necessary for the University to be represented on the governing body of any affiliated college. The Rev. Dr. Dangar, Principal of the Exeter Diocesan Training College for School Masters, raised the question about a year ago. Mr. Gerrans readily lent him a hand, and the Archbishop of Canterbury exerted his influence in favour of the proposal. The result will no doubt bring a very large number of secondary institutions into closer touch with Oxford.

THE fourth annual report of the Executive Committee of the Carnegie Trust states that the operations of the Committee have been directed mainly to administering the schemes. Under the scheme of allocation for five years of an annual grant of £40,000 among the four Scottish Universities, which became operative on January 1, 1903, sums amounting to £38,114. 12s. 4d. have been claimed and handed over during the year. The grants for library purposes and for provisional assistance in teaching, amounting to £6,400, have been paid. The grants for buildings and permanent equipment available for 1904, including a balance of £12,635 unexpended in 1903, amount to £33,035. Of these, the sum of £20,146. 8s. 6d. has been claimed. Claims for grants towards teaching endowments amount for the year to

£11,568. 3s. 10d. These include contributions to the foundation of two Chairs—that of History in the University of Aberdeen, and that of Geology in the University of Glasgow. In the present quinquennial scheme of grants the claims of the following extra-mural schools have been considered and included:—The Medical School of the Royal Colleges of Edinburgh, the Edinburgh Medical College for Women, Anderson's College Medical School, Glasgow, and West of Scotland Technical College, Heriot-Watt College, West of Scotland Agricultural College, Edinburgh and East of Scotland Agricultural College. Under the head of buildings and permanent equipment, grants of capital sums, to be drawn upon as required and approved during the period up till December 31, 1907, have been allocated to these institutions, amounting in all to £9,000; and, under the head of provisional assistance in teaching, grants amounting to £635 have been offered for the academic year 1904-5. The scheme of endowment of post-graduate study and research has now entered upon its second year. The total expenditure for 1903-4 under the scheme was £3,386. 8s. The estimated outlay for the current academic year is £5,177. 10s. Applications for Fellowships, scholarships, and grants for 1905-6 must be lodged on or before May 1 with the Secretary to the Trust, from whom application forms and regulations can be obtained. In the research laboratory of the Royal College of Physicians, the purchase of which was announced in the previous annual report, the past year has been one of steady and satisfactory work in all departments: 35 workers have held places in the laboratory, and have been engaged in 47 investigations. The payment of the class fees of beneficiaries under Clause B of the constitution has been carried out as in previous years. The number of beneficiaries for winter session 1904-5 is 3,075—an increase of 43 over the number for the previous winter session. The Committee record that during the year 1904 six graduates have refunded the class fees paid for them by the Trust, to the amount of £84. 2s.

Past and present members of Prof. Paul Barbier's French classes at the University College, Cardiff, assembled in force (March 14) to congratulate him on the academic distinction conferred upon him by the French President in appointing him an Officer of Public Instruction in recognition of his services to French literature and of his skill in teaching the French language. The students presented him with the decorative emblem of the order—two sprays of laurel in gold with a purple ribbon. Congratulatory speeches were made by representatives of the old students, the senior classes, the juniors, and the College staff, and by the Hon. Secretary. Prof. Barbier has been a member of the staff of the College since its establishment.

A COMMISSION was appointed a few years ago to inquire into the condition of manual and practical instruction in Irish primary schools, and, as the result of the recommendations made by this Commission, instruction in elementary experimental science was introduced into the primary schools of Ireland. The results of this teaching have, in the opinion of competent authorities, been in every way satisfactory. Not only has the educational value of experimental science again been demonstrated, but its beneficial effects on the progress of Ireland's industries and agriculture have been made clear. Notwithstanding the success which naturally has followed the introduction of practical instruction in scientific principles into Irish elementary schools, the Treasury has refused to renew the small grant required to meet the necessary expenditure; and the work of organizing science instruction in the schools—after four years—is being stopped. It is difficult indeed to understand so retrograde a policy. The incompleteness of all schemes of education which ignore the claims of practical instruction in the fundamental facts of science has been demonstrated repeatedly; the connexion between American and German industrial success and the scientific systems of education established in these countries has become familiar to all interested in their country's welfare; so that no excuse—not even the urgent need of economy in national expenditure—can justify this action of the Treasury. It is to be hoped earnestly that steps may yet be taken to avert what would be nothing short of a calamity to Ireland, and that the work, which has begun so auspiciously under the present organizers of science instruction, instead of being stopped, may be broadened and extended.

THE Lenten pastorals read in the Roman Catholic churches of Ulster (March 5) dealt at considerable length with the University

question. The Bishop of Down and Connor said it was an intolerable state of things that, while the gifted Catholic youth of the country were debarred, from conscientious motives, from entering the Queen's Colleges and Dublin University, they were excluded from the advantages of higher education through the clamorous opposition of an intolerant minority, who, though they themselves were in full enjoyment of those advantages, were allowed to veto every rational attempt to solve the University question. The reluctance or impotence of those charged with the government of the country to remove that long-standing grievance accentuated and added renewed force to the national demand for self-government, for, in a self-governed country, with a majority of the people Catholic, it was morally certain that such a flagrant violation of the primary rights of citizens would not be permitted to take place. The Bishop of Dromore said it was difficult to be patient when they talked of the monstrous injustice with which they had been so long treated in a matter of such surpassing importance, and still more so when they consider the lessons for which their claims had been so persistently denied. It was time for them to realize that, if they were to see the end of this cruel injustice, they must press their rightful claims with more vigour, with more earnestness, and with more determination than they had hitherto done. Their people must be taught to take an active and an intelligent interest in this question, which was absolutely one of national importance.

A PRAISEWORTHY attempt is being made, says the *New Age*, to establish in London an institution on the lines of the famous *universités populaires*, which have met with so much success in France and other Continental countries. The Université Populaire de Londres, which has been recently opened at 4 Euston Buildings, Euston Road, N.W., offers to its members and visitors a most attractive lecture list. At present the lectures are being carried on in French, that being the language chiefly spoken in the foreign quarter of London, but the Committee hope before long to arrange for lectures and discussions in German, Italian, Spanish, and English. There is no charge for admission to these lectures, but a subscription of 3d per week is levied for the use of the classes. This subscription includes admission to the reading-room, library, &c. An international circulating library of a thousand volumes is already in existence.

UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

OXFORD is now practically empty. It has become almost a creed now that the Easter Vacation is the proper time to take a holiday, free from the London mist and the indefatigable schoolmaster. Consequently term was only in its last gasps when some of the bolder spirits departed for Greece, and, as soon as "Collections" were over, there was a second great exodus—this time to Italy; while, a little later on, various more or less distinguished persons are starting (at reduced fares) to take part in the Oriental Congress in Algiers.

The time for the tourist and the American is not yet, and consequently the streets are refreshingly empty, and there is an air of quiet about the High to which it is a stranger even in the depths of "the Long." In the last Oxford letter attention was called to the fact that the Honour Moderators had a considerably smaller number of candidates to deal with this year. Consequently we may expect to see the results before next term. At the same time inferences, based on the numbers, that the examination is unpopular, and therefore (according to the critics) bad, seem rather hasty. It is, of course, possible that men who want an Honour degree in three years find that their easiest line of attack is to take Pass Moderations at the end of their second term, and then have seven terms to take History or Law. Certainly the new Pass Moderations at Easter, the original plan of which met with bitter opposition at first, seem to be successful if numbers spell success. For the term there were nearly three hundred candidates, and there is an agitation on foot to increase the payment of the Pass Moderators (who have, in addition, to look over the Divinity papers). It certainly seems as if Pass Moderations is the worst paid examination, as it means a good deal of work and a quite considerable time devoted to *viva*. On the other hand, the "Smalls" examiners, even including their work on "additional subjects," get off with about a week's work for £25 an examination (as against £15 for Moderations).

A note in the *Oxford Magazine* has—with or without acknowledgment—been going the usual round of the London and

provincial Press. The note in the original state was an appendage to a notice of the Temperance Conference under Mr. Rowntree's presidency: the suggestion in it that drunkenness in Oxford was at once habitual and venial seems an entire exaggeration of the truth. The writer seems to imply that it is almost a *sine qua non* of a so-called convivial evening or a bump supper that those present should drink too much. It would be interesting to know how many such meetings the writer can have attended. That among some two thousand young men there should be occasional cases of drunkenness can perhaps hardly be denied, and, if denied, would scarcely be believed; but that the undergraduate habitually gets drunk at a bump supper or a similar entertainment, or that it is considered the correct thing to do so, many of us who have had many years of experience both of the undergraduate and of the bump supper would flatly contradict. It does not follow that a man is drunk because he dances round a bonfire or fires off squibs and crackers or shouts at the top of his voice. If noise means drunkenness, then most public-school boys should be accused of the offence.

"The Clouds," as produced by the O.U.D.S., under distinguished patronage and assistance, may be pronounced a decided success. Certainly the stage settings, dresses, and general production do great credit to the promoters, while it is not often that an amateur society can command the services of such a versatile musical composer as Sir Hubert Parry. The difficulty with which Mr. Godby and Mr. Cyril Bailey had to contend was apparently whether they were to attempt to reproduce the spirit in which Aristophanes conceivably wrote the comedy, or the farce to which most probably Athenian actors transformed it, and, again, how far it might be modernized. Plainly speaking, the play as represented here was a farce, both Socrates and Strepsiadés being low "comedians." We confess that there was no hint of the pathetic in Strepsiadés nor of dignity in the pot-bellied, underdressed philosopher. The chorus was excellent and attractive, and the *coryphaeus* declaimed with vigour and sincerity. The play drew excellent houses, but the profits were hardly as large as were expected, mainly owing to the elaborate and expensive orchestra.

Of the events of the month we must record first the annual meeting (at Balliol) in connexion with Toynbee Hall. We had two excellent speeches—one from Mr. Lansburg, the other from Bishop Lang—then *in dispari materia* the performance of "Hamlet" (without scenery) by Mr. Tree and other distinguished actors.

The later vacation is the great time for Inter-University contests, and before these lines appear, or just when they appear, the Sports and the Boat Race will be over, and, soon after, the Golf Match. If the experts are to be believed, we shall lose all three this year, though lately some find unexpected excellence in our crew, and, indeed, after all Mr. Fletcher's energy, it would be remarkable if there were none.

The Sports ought to reach a high level in amateur performances: the Mile alone, in which there are four competitors any one of whom ought win easily in an ordinary year, ought to attract the enthusiasts. Cornwallis, our President, ought this year to win both the Quarter and the Mile, but, as Cambridge will win all the field events, probably we shall lose by 6 to 4. The Golfers have no great champions, but have done well at Sunningdale (where the match is to be played this year) in a contest against the local club, but Cambridge are probably better. However, let us hope for better things than our prophecies.

(From our own Correspondent.)

THE great Greek question has been answered, Cambridge, and academic calm once more is reigning. Never has more feeling been displayed in a university contest; never have the antagonists fought so bitterly or so strenuously. But there were many pleasing incidents. Cambridge was once more peopled with the returned exiles of bygone times, and the sight was a cheering one. Country parsons, barristers, doctors, politicians beamed benevolently upon the passers by, and looked for all the world like happy schoolboys out for a holiday. The actual result was pretty much what was expected: the majority of 500 was not a surprise, but the largeness of the poll on both sides was remarkable, over 2,600 voters handing in their cards. Now that the great struggle is over many of the winning side are sorry that no opportunity was given them of approving some of the suggested alterations—for example, the relegation of English composition to the third part of the Little-Go, and the addition of Chemistry as an optional

or compulsory subject in that part. The next difficulty will arise with respect to the General, and there seems to be a feeling that it would be wise to rearrange the subjects of the two parts so as to prevent a weakness in Classics being supplemented by strength in Mathematics, and *vice versa*, as at present is possible. This question will be of purely academic interest; whereas the Little-Go, being practically an entrance examination, affects the schools.

The colleges quite rose to the occasion on March 3 and 4: free lunches and dinners were provided for all members of the Senate irrespective of party, and the hospitality was most thoroughly appreciated. The "Cambridge Hoax" seems to have puzzled the London papers; it was ingeniously carried out, and the local authorities have, like thorough sportsmen, not made too zealous inquiries as to the perpetrators of the jest. Rumour, doubtless a lying jade, has it that the Sultan himself would not need much persuasion from his numerous friends and old school-fellows in Cambridge to come down and pay a genuine surprise visit *in propria persona* to the Mayor and Corporation.

The little fuss about removing some of the law books from the University Library to the new Squire building has been amicably settled. The lawyers will now be able to have a little laboratory of their own, and will be able to conduct their work under conditions more suitable for effectiveness.

An unobtrusive institution has existed among us for some time, and is now beginning to attract attention by solid results rather than by promiscuous advertisement: the Cambridge Day Training College now can boast of a membership of fifty-five primary and nine secondary students. The staff consists of Mr. Oscar Browning, the Principal; Mr. S. S. F. Fletcher, master of method; Mr. Blandford, assistant master of method; and Mr. R. L. Archer, Assistant Lecturer on Education. Mr. T. Wallis, Head Master of the Higher-Grade School in Paradise Street, also takes a leading part in the work of the college. In no department can the University make its influence more widely or more usefully felt than in bridging over the gap between primary and secondary education and by strengthening the rungs of the ladder which leads the promising student from the Board school to the University.

During the recent debate on the Greek question the Vice-Chancellor, Mr. Beck, who throughout conducted the whole of the proceedings with a genial courtesy which won admiration from both sides, introduced a new departure in admitting reporters to the floor of the Senate House. It is now proposed to give powers to the Vice-Chancellor to perpetuate the practice. Objection has been raised that a full-dress debate often proves worthless, and results in the reading of essays to the exclusion of free, spontaneous, and informal discussion. Those who were present at the late debate would be the first to acknowledge that very many essays were read to the Senate and to the reporters, but for all that hardly a point was taken by any speaker which was not fully discussed or controverted by one or more speakers on the other side.

Some of your readers may be interested to learn that the appointment of Assistant Secretary to the Syndicate for Local Lectures is now vacant. The salary—small as it is, £150 a year—might well tempt a man who values the opportunities given by residence in Cambridge; while to serve under the genial Secretary, Mr. Cranage is, in itself, a privilege. May 8 is the last date for applications.

Through the generosity of the late Mr. Maccoll, a Lectureship in the Language and Literature of Spain and Portugal is to be founded. A course of five lectures will be delivered every four years; this will doubtless lead to really good work being given to us by people who know something about their subject.

The following personal items may be of interest:—Sir Frank Younghusband, K.C.I.E., has been appointed Rede Lecturer for 1905; Mr. T. S. P. Strangeways, Huddersfield Lecturer in Special Pathology; Mr. R. P. Gregory, Senior Demonstrator in Botany.

At the time of writing the Boat Race promises to be full of interest; both crews have considerably improved, and there is every chance of a close race, Cambridge having perhaps a slightly better chance of winning. But the struggle should be a good one. The Sports should also fall to us by a bare majority of events.

At the annual meeting of University College, London, on February 22, the following resolution, moved by Lord Reay, on behalf of the Council, was unanimously adopted:—"That the Bill now submitted, entitled

A Bill for transferring University College, London, to the University of London and for other matters connected therewith, and for amending the University of London Act, 1898, be and the same is hereby approved subject to such additions, alterations, and variations as Parliament may think fit to make therein."

The Senate have informed the London County Council that they have made arrangements for opening the training college at the Goldsmiths' College in September next, and that it will be carried on under the regulations of the Board of Education as a college providing a two years' course for men and women students who have passed the King's Scholarship or other equivalent examinations. The management of the college will be entrusted to a delegacy in which the London County Council, as well as the Councils of neighbouring counties and county boroughs, will be represented. The college will be entirely unsectarian, and no religious test will be required from members of the delegacy, members of the staff, or students. The college will probably be recognized by the Board of Education as providing accommodation for five hundred students, although it may be restricted to four hundred. Applications have been received for 540 places from various Councils, and, as this number is in excess of the maximum accommodation, the number to be assigned to each Council will be reduced *pro rata*. The London County Council will have allotted to them 74 or 93 places, according to the total number recognized, provided that the Council undertake to pay the University a sum calculated at £16 per student—namely, £1,488 or £1,184, as the case may be—together with a contribution towards the initial maintenance expenses. The University propose to spend a considerable sum in adapting the premises for training-college purposes, in providing the establishment expenses, and in paying a portion of the salaries of the educational staff. They ask the contributing Councils to assist in meeting the cost of maintenance on the educational side, and the amount which the London County Council will be asked to pay for the session will be either £1,500 or £1,200, the amount depending upon the number of students for which the college is recognized. This payment, which will be for one year only, is necessitated by the initial maintenance expenses, incidental to the opening of a large educational institution; and in future years, when the full number of students has been reached, the Council's contribution will be confined to a payment calculated at £16 per student.

The London School of Tropical Medicine has been admitted as a school of the University of London in the Faculty of Medicine in tropical medicine only.

The Senate have agreed to provide the Sociological Society with accommodation in the University Building for the purpose of entertaining the International Institute of Sociology during the Congress which will be held in London under its auspices in July, 1906, and themselves to invite the members of the Congress to a reception.

A REPORT on the work of the session 1904-5 in Manchester. the Faculty of Commerce, presented to the Advisory Committee, states that the Faculty is now completely organized and in full operation. The students entered for the degree number fourteen. The number of those attending two or more courses in the University, some in the day and some in the evening, but not entered for the degree, is also fourteen. Some of the latter will be candidates for the Higher Commercial Certificate. There is also a considerable body of students attending single courses of lectures. Particular reference is made to the specialized courses bearing on different businesses. At present there are three such courses—Railway Economics, Banking, and Accounting—the scheme of classes for each course covering two years. At some of these classes the attendances have been large; and most of the railway companies connected with Manchester have encouraged attendance at the lectures on Railway Economics by making agreements with the University whereby the fees of the members of their staffs are provided for. The Manchester Bankers' Institute has established ten scholarships for competition among its members, which cover the cost of the two years' course on Currency and Banking. The report adds that it is highly desirable that steps should be taken to accelerate the development of the Faculty, and the first and most obvious need is that its work should be made more generally known. The Bolton Education Committee has instituted three scholarships in connexion with the classes held in the evening for competition among those students who have attended the classes under the scheme of commercial education

at Bolton. This system the authorities would like to see extended.

Wales. THE question of appointing a salaried official as the executive head of the University of Wales is again being discussed in academical circles, though there is little probability of immediate action being taken in the matter. It had been hoped that arrangements could have been made to secure the services of Sir Isambard Owen, the Senior Deputy Chancellor, but it is feared that the recent acceptance by Sir Isambard of the Principalship of the Durham College of Science has made this impossible, at least for the present. It is felt that there is much inconvenience in the present arrangement, the Senior Deputy Chancellor being away at Newcastle-upon-Tyne, the Junior Deputy Chancellor for two years out of every three away at Bangor or Aberystwyth, and the University offices and the Registrar at Cardiff. In the current issue of the *Welsh Leader*, Sir T. Marchant Williams, in a vigorous article, pleads for reform. "The work at the Registry," he writes, "needs to be overhauled and rearranged; the constitution of the Standing Executive Committee needs to be reconsidered; the duties of the Vice-Chancellor need to be more clearly and accurately defined; but, I maintain, the one great need of our University at this moment is an active, efficient working head. This need outweighs all other needs in urgency and importance."

Reading. LORD GOSCHEN, Chancellor of the University of Oxford, has consented, at the invitation of the Council of University College, to lay the foundation stone of the buildings about to be erected on the new college site in London Road. The ceremony will take place in June next.

St. Andrews. A COMMITTEE has been appointed to communicate with the other Scottish universities and with others interested, with a view of arranging for ceremonies to take place at St. Andrews about the end of winter session, 1905-6, in celebration of the four-hundredth anniversary of the birthday of George Buchanan, the celebrated Scottish humanist and tutor of James VI., who was a student of the University, and later Principal of St. Leonard's College. Mr. J. P. Steele, M.D., LL.D., Florence, proposes to give a prize of a hundred guineas for the best essay on "Sixteenth Century Humanism as illustrated by the Life and Work of George Buchanan," to be open to competition from the four Scottish universities; a prize of £21 for the best translation by a St. Andrews student of "Baptistes" or "Jephthes," tragedies written by Buchanan, and other prizes for translation by St. Andrews students of selected passages from Buchanan's other works.

THE REV. PREBENDARY WHITWORTH.

WE announce with deep regret the death of the Rev. William Allen Whitworth, M.A., Vicar of All Saints, Margaret Street, and a Prebendary of St. Paul's Cathedral, at the age of sixty-five. Others will pay ample tribute to the services the late Prebendary rendered to the Church: it is for us to regard more especially his relation to mathematical science, for as a mathematician he was for many years intimately known to our readers. Like the late Mr. Tucker, he was one of the earliest contributors to the mathematical columns of *The Educational Times*: the names of both occur in the list of contributors prefixed to the very first volume of the *Reprint*. Of that list the only working survivor now is Prof. Hudson, unless we mention the Rev. Dr. Taylor, Master of St. John's College, Cambridge, and Archdeacon Wilson, both of whom have diverted their energies to other lines of work. Prebendary Whitworth was an authority in the region of pure probability, as Prof. Crofton has long been, and still is, in that of "local" probability. There is no book better fitted to enlighten the student of this subject than "Choice and Chance," a work that is now in its fourth edition, and which, in conjunction with the author's "DCC Exercises," affords a source of information as convenient as it is reliable. A hard-worked vicar of a fashionable church, Prebendary Whitworth found recreation in his favourite branch of mathematics to the last. He took lively pleasure in his work as Gresham Professor on the philosophy of chance; and our mathematical columns bear abundant testimony to the keenness of his intellect. In the great sorrow that has befallen them, his relatives may rest assured of the profound sympathy of our readers and ourselves.

THE

Harmsworth Encyclopaedia

COSTS $\frac{1}{2}$ d.

40 Parts. Fortnightly. 6,400 pp.

The drawback until the present day has been the prohibitive cost of reliable works of reference. No need now to pay so many guineas though, for here is one prepared at a possible price for the people—later and more up-to-date than all others, and, in consequence, better.

THE HARMSWORTH ENCYCLOPÆDIA places within your reach a most scholarly, exhaustive, and wonderfully accurate store of universal knowledge for one halfpenny per day—free from the worry at any time of heavy instalments to meet. The whole work will be complete in 40 parts, published fortnightly at 7d., with 6,400 pages, and costing only **£1. 3s. 4d.**

THE HARMSWORTH ENCYCLOPÆDIA is not a revised work. It is new in every line, and is of the highest value to every man, woman, and child who appreciates the possibilities of the future. Golden as may be the sky of to-day, to-morrow may bring much better things to those who will increase their store of knowledge by buying and reading this great work compiled by over 500 specialists in every branch of human activity.

THE HARMSWORTH ENCYCLOPÆDIA has been prepared and printed by Thomas Nelson & Sons, the well-known Publishers. It is lavishly illustrated with pictures, maps, and diagrams.

It is indispensable to TEACHERS, STUDENTS, CRAFTSMEN, CLERGYMEN, WRITERS, JOURNALISTS (for their benefit very full bibliographical lists are attached to the important articles, thus aiding further study and research), THE MODERN BUSINESS MAN, THE GENERAL READER. It is useful to all who love knowledge, all who want information, to women, and to *everybody*. It is purchasable by anybody, for EVERYBODY can afford a halfpenny a day.

The need for Technical Instruction has become very great in our day. Efficiency in our daily work is the royal road to success. THE HARMSWORTH ENCYCLOPÆDIA is specially suited to all Educational Workers and those engaged in Technical Instruction, as well as Students. It contains articles on modern industries written by practical experts. Carpentry, Weaving, Dyeing, Dress-making, Brewing, Electrical Topics, Engineering, are dealt with in their modern aspects, and copious reference is made to the best and newest works of competent writers.

It is an intellectual necessity to every thinking man. The Teacher, the Clergyman, the Doctor, and the Journalist need it, because it is the most recent of all Encyclopædias, and presents the latest facts and ideas regarding every department of human thought and activity.

The Technical Worker and the Business Man need it, because every aspect of their special work is discussed and explained in its modern relations.

The Teacher and the Student need it, because

A DAY.

Total cost, **£1. 3s. 4d.**

innumerable bibliographical references give them carefully selected lists of the modern authoritative works in which they may find all the further information they require.

Every woman needs it, because it treats in a thoroughly scientific and practical spirit the subjects of most interest to women, such as Cooking, Dress and Dressmaking, Furniture, Hygiene and Diet, Nursing, Gardening, and the Lives of Notable Women in every Walk of Life.

The more books we amass in our libraries, public or private, the more we need a guide to their proper use. Many a reader finds himself in the position of a mariner without a compass. Which books shall he read? which shall he avoid? There are hundreds to choose from, and library catalogues give him no help.

This is where THE HARMSWORTH ENCYCLOPÆDIA comes in. One of its strong points is that all the important articles in it contain a list of the Best Books on the subject. Intelligent selection is thus made easy to the ordinary reader. To place THE HARMSWORTH ENCYCLOPÆDIA on your shelves is to have the British Museum at your elbow.

The abundant illustrations of THE HARMSWORTH ENCYCLOPÆDIA are inserted for utility in the first place, to throw new light upon a difficult subject, to give graphic representation where words fail to make the impression clear.

Technical Diagrams, Plans, and Maps (many of the last in colour) combine to instruct and interest the reader. At the same time artistic effects have been secured by the insertion of Photographs and Sketches of Landscapes and Buildings and Reproductions of famous Pictures and Statues. Special attention has been given to Portraits, which are always of a unique human interest, and which familiarize the reader with the personality of great men as nothing else can do.

The variety and attractiveness of the illustrations are unapproached in any other work of the kind.

BIOGRAPHY is a strong point with THE HARMSWORTH ENCYCLOPÆDIA. It recognizes the Great Men of the present as fully as those of the past.

For full information, not only on matters of serious interest—Science, History, Geography, Antiquities, Art, Theology, Law, Medicine, Technical Operations, Agriculture, Architecture—but on Sports and Pastimes, Games and Athletics, and all matters of everyday interest, you need never consult THE HARMSWORTH ENCYCLOPÆDIA in vain, and it will be found as easy of reference as a Dictionary. The volumes are convenient to handle and not of burdensome weight.

There is no person, however circumstanced, who will not find THE HARMSWORTH ENCYCLOPÆDIA an indispensable work to have at his side. As a Book of Reference, to answer questions arising out of reading and conversation, it will be in daily use.

EXAMINATIONS OF THE BOARD OF EDUCATION.

BOOKS FOR THE FIRST STAGE.

I.—Practical Plane and Solid Geometry,

First Stage. By G. F. BURN, A.M.Inst.M.E. 2s.

School World.—"Written both with knowledge of the subject and with appreciation of the difficulties of beginners."

III.—Building Construction, First Stage.

By BRYSSON CUNNINGHAM, B.E., Assoc.M.Inst.C.E. 2s. 6d.

Builders' Journal.—"This book accurately fulfils its purpose."

V.—Mathematics, First Stage. Containing all

the Algebra and Euclid required. Edited by Dr. Wm. BRIGGS, M.A., F.R.A.S. 2s.

Secondary Education.—"We know of no other book so suitable for the special purpose for which it has been compiled."

VIA.—Mechanics (Solids), First Stage. By F.

ROSENBERG, M.A., B.Sc. *Fifth Edition.* 2s.

Schoolmaster.—"The book meets most creditably the requirements of the syllabus."

VIB.—Mechanics of Fluids, First Stage. By

G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A. 2s.

Educational Times.—"The book seems to be excellently adapted to its purpose."

VIII.—Sound, Light, and Heat, First Stage.

By JOHN DON, M.A., B.Sc. 2s.

Educational News.—"Thorough in treatment and masterly in its method."

IX.—Magnetism and Electricity, First Stage.

By R. H. JUDE, M.A., D.Sc. *Second Edition.* 2s.

Nature.—"As a first course on magnetism and electricity the book should prove serviceable."

X.—Inorganic Chemistry (Theoretical),

First Stage. By G. H. BAILEY, D.Sc., Ph.D. Heidelberg. 2s.

Pharmaceutical Journal.—"Probably the best systematic introduction to chemistry yet published."

XP.—Inorganic Chemistry (Practical), First

Stage. By F. BEDDOW, Ph.D., D.Sc. *Second Edition.* 1s.

Guardian.—"This useful manual fully meets the syllabus."

XIP.—Organic Chemistry, Practical. By

GEORGE GEORGE, F.C.S. 1s. 6d.

XVII.—Botany, First Stage. By Dr. A. J. EWART.

School Guardian.—"This is an introductory text-book of first-rate quality, and we recommend it to the notice of teachers."

XX.) Modern Navigation. By WILLIAM HALL,

XXIB.) B.A., R.N. 6s. 6d.

School World.—"In all respects we think this book possesses very unusual merits as a sound and trustworthy exposition of its subject."

XXII.—Steam, First Stage. By J. W. HAYWARD,

M.Sc. 2s.

Nature.—"The author is very happy in the treatment of this subject. The book is sure to give satisfaction wherever used."

XXIII.—Physiography, First Stage. By A. M.

DAVIES, A.R.C.S., B.Sc., F.G.S. 2s.

Teachers' Monthly.—"Will form one of the best text-books for the examination."

XXV.—Hygiene, First Stage. By R. A. LYSTER,

B.Sc. 2s.

Schoolmaster.—"The book presents a continuous and well developed course of instruction in hygiene. The facts are always reliable."

Detailed list of the above, and Books for the Second Stage, post free on application.

CURRENT EVENTS.

A JOINT MEETING of members of the College Fixtures. and of the Assistant Masters' Association will take place at the College of Preceptors on Wednesday, April 12, when Mr. T. P. Nunn, M.A., B.Sc., will read a paper on “Science Teaching and the Theory of Science.”

THE School Nature-Study Union will hold a meeting at the College of Preceptors on April 7 at 7.30 p.m.

DR. RABAGLIATI, of Bradford, will lecture on “The Health of Children *qua* Food and Management” to a joint meeting of the British Child-Study Association and the Childhood Society at the Parkes Museum, Margaret Street, W., on April 6, at 8 p.m.

THE annual conference of the British Child-Study Association will be held at Derby on May 11–13, Prof. Muirhead, LL.D., of Birmingham University, President. The local Hon. Sec. is Miss D. Dyer, 17 Hartington Street, Derby.

THE first Adamson Lecture at Manchester University will be delivered by Prof. Ward, of Cambridge, on June 2.

THE sixth annual examination of candidates for the National Diploma in the Science and Practice of Agriculture will begin at Leeds University on May 8.

THE 21st annual competition in French Language and Literature, arranged by the National Society of French Teachers in England, will take place on November 4.

MR. E. NOBLE SMITH, F.R.C.S., President of the Ambidextral Culture Society, will address the Society on “Ambidexterity in Surgery” (with demonstrations) at the rooms of the Royal Statistical Society (9 Adelphi Terrace, Adam Street, Strand) on April 13 at 5 p.m.

THE Universal Cookery and Food Association is organizing a sixteenth exhibition, to be held at the Royal Agricultural Hall in May.

THE Board of Education examination of candidates for admission as pupil-teachers (Article 2 (b) and Appendix C of 1904 Regulations) will be held on April 15.

THE Board of Education announce that candidates for the Certificate Examination will not be examined in Drawing on the Blackboard at the Drawing Examinations in April, May, or June, but at the Certificate Examination in July.

THE Edinburgh Vacation Courses Council has organized vacation courses in French, German, and English, to be held in the University of Edinburgh in August. Apply to Prof. Kirkpatrick.

A SUMMER meeting, not confined to teachers, will be held in Amsterdam in August next. Lectures in English. Particulars from Miss Scriven, Northwold Road, Clapton, N.E.

* * *

THE fifth International Congress of Psychology will be held in Rome from April 16 to 30.

* * *

THE University of Dijon offers this year (for the third time) Summer Courses for foreign students, July 1 to October 31. M. C. Cestre, A.M. (Harv.), general secretary.

◆◆◆

IN connexion with the reopening of the Honours. Aberdeen Art Gallery, the University of Aberdeen will confer the honorary degree of LL.D. (April 7) upon John B. Bury, M.A., D.Litt., LL.D., Professor of Modern History in the University of Cambridge; Alberto Galli, Professor of Fine Art and Director-General of the Museums and Galleries of the Vatican; Francis John Haverfield, M.A., Tutor and Lecturer in Christ Church, Oxford; Lord Reay; Edward Robinson, B.A. (Harvard), Keeper of Greek and Roman Antiquities in the Museum of Fine Arts, Boston; Joost M. W. Van der Poorten-Schwartz ("Maarten Martens").

* * *

THE University of Aberdeen will also confer the honorary degree of D.D. upon Enrico Bosio, Principal of the Waldensian College, Florence; the Rev. William Ralph Inge, Fellow and Classical Tutor of Hertford College, Oxford; and two local clergymen; and the honorary degree of LL.D. upon Mr. Thomas Hardy, the novelist; Mr. Duncan MacGregor, M.A., M.B., C.M., Inspector General of Asylums and Hospitals, New Zealand; Mr. John Theodore Merz, Ph.D., D.C.L. Durham; Mr. John Struthers, C.B., Secretary of the Scotch Education Department; and Sir James Thomson, K.C.S.I., recently Acting Governor of the Presidency of Madras.

* * *

PROF. OSLER, the new Regius Professor of Medicine at Oxford, has received the honorary degree of LL.D. from Johns Hopkins University on his resignation of the Professorship of Medicine at Baltimore.

* * *

THE University of Oxford has conferred the honorary degree of D.Litt. upon Mr. Edward Arber, F.S.A., Emeritus Professor of English at Birmingham University, and Fellow of King's College, London; and the honorary degree of D.Sc. upon Prof. E. B. Tylor.

◆◆◆

A COMMITTEE representative of the Royal Scottish Geographical Society, the Royal Society (Edinburgh), the Edinburgh Merchant Company, and other bodies, has been formed to raise at least £15,000 to endow a Chair of Geography in the University of Edinburgh.

* * *

MR. ALFRED BEIT has increased his donation to the Institute of Medical Sciences Fund (University of London) from £5,000 to £25,000.

* * *

MANCHESTER UNIVERSITY has received a legacy of £1,000 under the will of the late Mrs. Mary Worthington, of Sale Lodge, a generous benefactor (particularly to the Women's Department) in her lifetime; and £500 from Dr. Ludwig Mond for extension of the chemical laboratories. The Vulcan Boiler Insurance Company has founded a Fellowship in Engineering.

PART of the fund raised to commemorate the late Sir William Mitchell Banks is to be devoted to a Memorial Lectureship in Medical Science at Liverpool University.

* * *

MR. E. R. MUSPRATT, President of the Council of Liverpool University, has offered £10,500 to provide for an extension of the chemical laboratories of the University.

* * *

THE Cardiff Corporation has offered a site, worth £20,000, for the erection of a national museum for Wales, and has voted £2,000 for the maintenance of the museum and £1,000 a year towards the expenses of a library.

The Mackintosh of Mackintosh has promised £2,000 towards the Welsh National Museum and Library, provided Cardiff is selected as the locality of those institutions. Mr. John Cory (Cory Brothers), Cardiff, has also promised £2,000 on like terms.

* * *

WESTERN COLLEGE, Bristol, wants £12,000 for buildings. It has fair hopes of raising two-thirds of the sum in Bristol, and Congregationalists elsewhere will surely provide the other third without delay.

* * *

SIR WILLIAM MACDONALD proposes to endow an Agricultural College, with a Normal School for agricultural teachers and an extensive experimental farm, in Canada. The scheme will cost several million dollars.

* * *

MR. CARNEGIE is reported to have offered £100,000 to the University of Virginia on condition that a like amount be raised from other sources. The late Mr. James C. Carter, an eminent New York lawyer, has left £40,000 to Harvard. A gift of some £20,000 has been made to George Washington University for a Chair and course of graduate study of the History of Civilization, while some £55,000 is announced to have been raised by the trustees and the Alumni Association.

* * *

IN his last report, President Eliot recommends (says *Science*) the collection of £500,000 as an endowment for the College of Harvard University, and it said that the alumni are making efforts to collect this sum before the next commencement day. The class of 1880 expects to contribute £20,000 on the occasion of its twentieth-fifth anniversary.

* * *

By the death of Mrs. Stanford, the Leland Stanford Junior University of San Francisco, which was founded in memory of her son and has been liberally supported by her, is expected to benefit to the extent of three or four millions sterling.

* * *

THE Amir of Afghanistan has given Rs. 30,000 (about £2,000) to the special fund formed to bring the Islamia College, Lahore, up to the statutory standard, in addition to his permanent annual contribution of Rs. 8,000.

◆◆◆

Scholarships
and Prizes.

SEVEN Cambridge colleges will hold a combined examination for 62 entrance scholarships and various exhibitions on December 5 and following days. Pembroke offers 2 scholarships of £80, 3 of £60, and 4 of £40. Gonville and Caius: 2 scholarships of £80, 3 of £60, and 5 of £40; also special scholarships for Mathematics and History. King's: 2 scholarships of £50, 2 of £60, 3 exhibitions of £40 (limited), and 5 Eton Entrance Scholarships. Jesus: 2 scholarships of £80, 2 of £60, 4 of £40. Christ's: 1 of £80, 3 of £60, 4 of £40. St. John's: 3 of £80, 5 of £60, 3 of £40.

Emmanuel: 1 of £80, 3 of £60, 4 of £40, and (perhaps) 2 sub-sizarships. All the colleges (except King's) may also award exhibitions (not over £30 for two years) to deserving candidates that do not obtain scholarships. Candidates must be under nineteen on October 1. Detailed information and application forms from the Masters of Gonville and Caius and Emmanuel, Mr. W. S. Hadley (Pembroke), Mr. W. H. Macaulay (King's), Mr. A. Gray (Jesus), Rev. J. W. Cartmell (Christ's), and Dr. D. MacAlister (St. John's).

* * *

WORCESTER COLLEGE, Oxford, offers 1 open Classical scholarship of £80, and 3 open Classical exhibitions (no age limit) of £35 or £21, to candidates under nineteen. Examination begins June 29. Send usual certificates to the Provost by June 24.

* * *

THE Taylorian Scholarships in Modern Languages at Oxford are to be discontinued, and the money is to be applied to the provision of additional instruction in modern languages.

* * *

THE London County Council offers probationer scholarships (free education for two years at approved secondary schools, with maintenance grant of £15 a year, open only to candidates resident in the County of London), and pupil-teacherships, to boys and girls attending elementary (public or private) or secondary schools. Apply to the Executive Officer of the Education Department, Victoria Embankment.

* * *

THE Anglo-French Association, "L'Entente Cordiale," offers two travelling scholarships of £10 each, on the lines of the Circular of the Board of Education. Competition at City of London School for Boys on November 4, at 10 a.m. Apply to J. Belfond, Esq., Broglence Villa, Melrose Terrace, West Kensington Park, W. (enclosing registration fee, 2s. 6d., P.O. crossed) by November 1.

* * *

THE Education Committee of the Victoria League offers to the boys' preparatory schools of the country a prize of a complete set of Mafeking stamps (valued at £20 to £30) for the best essay on "How the Union Jack came to be the National Flag." Particulars from the Secretary, Education Committee, Victoria League, Dacre House, Victoria Street, S.W.

* * *

THE Committee of the National Temperance League, as trustees of the "Robert Rae Memorial Fund," offer to students in training colleges thirteen prizes (£25 in aggregate) for a written Model Lesson based on a special syllabus.

* * *

FORMER pupils of the Misses Fletcher, who for many years carried on a school at West Coombe House, Upper Hornsey Rise, have given £150 to the Cambridge Local Examinations and Lectures Syndicate to found an annual prize for the woman that stands highest in Greek of those that are successful in both Greek and Latin at the Cambridge Higher Local Examination.

Appointments and Vacancies.

MR. F. W. WALKER, High Master of St. Paul's (since 1876), it is understood, has sent in his resignation, to take effect at the

end of the Midsummer term.

* * *

THE REV. CANON GLAZEBROOK has resigned the Head Mastership of Clifton, which he has held for fifteen years.

DR. LUCAS WHITE KING, C.S.I., Commissioner of the Rawal Pindi Division and Fellow of the Punjab University, has been appointed to the Chair of Arabic, Persian, and Hindustani in Trinity College, Dublin, Lieut.-Colonel Ranking, who was appointed so recently as February 11, having resigned on appointment to Oxford.

* * *

THE REV. DR. FAIRBAIRN, Principal of Mansfield College, Oxford, has accepted the Deems Lectureship at New York University this year.

* * *

SIR FRANK E. YOUNGHUSBAND, K.C.I.E., LL.D., has been appointed Rede Lecturer for this year.

* * *

IN the University of London, Dr. E. R. Edwards has resigned his post as Secretary to the University Extension Registrar upon his appointment as Inspector of Secondary Schools under the Board of Education.

Mr. Robin Roscoe, B.A., and Miss Jessie D. Whyte have been appointed respectively Secretary and Assistant Secretary to the University Extension Registrar.

Prof. Walter Rippmann, M.A., has been appointed a Staff Inspector under the University Extension Board in connexion with their conduct of the inspection and examination of schools.

* * *

MR. W. M. GLOAG, advocate, has been appointed Professor of Law in the University of Glasgow, in room of Mr. A. Moody Stuart, resigned.

* * *

MR. W. A. J. ARCHBOLD, M.A., LL.B., Secretary to the Board of Indian Civil Service Studies, Cambridge, has been appointed Principal of the Mahomedan Anglo-Oriental College, Aligarh, in succession to Mr. Theodore Morison.

* * *

THE Registrarship of University College, Aberystwyth, is vacant by the death of the Rev. T. Mortimer Green.

* * *

MR. CHARLES GODFREY, M.A., assistant master, Winchester College, has been appointed Head Master of the Royal Naval College, Osborne, in room of Mr. C. E. Ashford, M.A., who is transferred to the Royal Naval College, Dartmouth.

* * *

MR. G. C. SIMPSON, B.Sc., has been appointed Lecturer in Meteorology and Assistant Lecturer in the Department of Physics in Manchester University.

* * *

MR. FRANK E. A. TRAYES, M.A. Cantab., assistant master, St. Paul's School, London, has been appointed an Inspector of Secondary Schools under the Board of Education.

* * *

THE Head Mastership of Stourbridge Grammar School will be vacant at the end of July next.

* * *

THE Head Mastership of High Wycombe Royal Grammar School is vacant through the sudden death of Mr. G. J. Peachell, M.A.

* * *

MR. VERE COLLINS, B.A. Oxon., assistant master, Mercers' School, London, has been appointed Organizing Secretary of the National Home-Reading Union.

* * *

MR. JOHN PEILE, B.A. Cantab., assistant master, Mercers' School, London, has been appointed assistant master at Aske's School, Cricklewood.

Literary Items. MESSRS. LONGMANS are just commencing the publication of a new "History of England" in twelve volumes, under the editorship of the Rev. William Hunt and Mr. R. L. Poole. Vol. X. (1760-1801), by Mr. Hunt, is promised immediately; Vol. I. (to 1066), by Dr. Hodgkin, and Vol. II. (1066-1216), by Prof. G. B. Adams, will probably follow next month; and among the authors of the other volumes are Prof. Tout, Prof. Oman, Mr. H. A. L. Fisher, and Mr. Sidney Low.

* * *

THE "Harmsworth Encyclopædia," prepared and printed by Messrs. Thomas Nelson & Sons and published by arrangement with the Amalgamated Press, will appear in 40 fortnightly parts of 160 pages each, liberally illustrated (7d. a part). The first three parts show plainly that the compilation is thoroughly fresh and first-hand work, and likely to be most valuable for reference.

* * *

MR. FISHER UNWIN is publishing "Studies in General Physiology" in two volumes, by Prof. Loeb of California University, whose biological discoveries have recently made some stir in the scientific world.

* * *

MR. FISHER UNWIN is also publishing a translation of the famous farce "L'Avocat Patelin," by Mr. S. F. G. Whitaker, from the version prepared by the Abbé Brueys for the Comédie Française in 1706.

* * *

MESSRS. SAMPSON, LOW, MARSTON, & Co. announce a work of nearly 400 illustrations of Old Testament history, reproduced mostly in colour, and partly in monochrome and black and white, from original drawings by M. Tissot—a companion work to M. Tissot's "The Life of our Lord Jesus Christ."

* * *

MESSRS. WILLIAMS & NORGATE will presently publish "School Teaching and School Reform"—a course of four lectures delivered by Sir Oliver Lodge in February to secondary teachers and teachers in training.

* * *

THE Walter Scott Publishing Company are publishing Mr. Walter Macfarren's "Memories: an Autobiography," profusely illustrated with reproductions from his album of autographs of famous musicians.

* * *

THE *Modern Language Quarterly* has completed its seventh volume, with distinction and usefulness. It is indispensable to all that wish to keep abreast of current criticism within its sphere of operations. The complementary review, *Modern Language Teaching* (6d.), makes an excellent start (March) under the editorship of Prof. Rippmann. Messrs. A. & C. Black are the publishers.

* * *

THE new number of the *Paidologist* (February) has several substantial articles, including an elaborate paper on "Nature and the Laws of Fatigue" (with illustrations) by Miss Margaret Drummond, M.A., and the substance of Prof. Findlay's recent address to the Manchester Branch of the Teachers' Guild on "The Personal Influence of the Teacher."

* * *

THE *Zeitschrift für Lehrmittelwesen und pädagogische Literatur*, edited by Dr. F. Frisch, Direktor des Landes-Lehrerinnen-Bildungsanstalt und K.K. Bezirksschulinspektor in Marburg (Steiermark), and published by A. Pichlers Witwe & Sohn, Vienna, makes a very creditable first appearance (January), with able articles and good illustrations (M. 4.20 yearly).

THE Board of Education has issued three fresh volumes of Special Reports on Educational Subjects—Vols. XII., XIII., and XV. (2s., 1s. 8d., 1s. 8d., Wymans)—describing the educational systems of the chief Crown Colonies and Possessions of the British Empire, including Reports on the Training of the Native Races, from the West Indies and Central America to Hongkong.

* * *

THE *World's Work* for March gives a sufficiently optimistic sketch of "London's Great Teaching University," with portrait of Sir Arthur Rücker.

IN consequence of a munificent gift of General. £20,000 for the maintenance and education in the Girls' School of Christ's Hospital of an additional number of girls, the Council of Almoners are prepared to consider applications on behalf of orphan daughters of commissioned officers in the naval or military services of the Crown, Civil servants, clergymen of the Church of England, and members of the legal and medical professions. Candidates can only be admitted between nine and eleven years of age, must be of good character and in sufficient bodily health, and the guardians must be in need of assistance. Forms of application may be had from the Clerk of Christ's Hospital, London, E.C.

* * *

THE General Committee of the Temple Memorial Fund have decided in favour of the erection of a new schoolroom at Rugby "as the best form of a memorial of the late Archbishop Temple." From £10,000 to £12,000 is needed; and fully £6,000 is in hand, £2,300 of which has been contributed by the Rugby masters.

* * *

MR. BROCK'S medallion of the Archbishop will be unveiled in Rugby Chapel on June 24.

* * *

It is proposed to place a window in Radley College Chapel in memory of the late Rev. H. L. Thompson, Vicar of St. Mary's, Oxford, and formerly Warden of Radley. Some £200 is needed. The Rev. the Warden of Radley will receive subscriptions.

* * *

DR. R. P. SCOTT was presented with a solid silver salver and a cheque at the College of Preceptors (March 18) in recognition of his services to educational organization and progress. Canon Bell, who made the presentation, and Sir Philip Magnus, paid high tributes to Dr. Scott's work.

* * *

THE principals of the Normal Correspondence College have awarded gold medals to their five pupils that were bracketed at the top of the list at the last King's Scholarship Examination.

* * *

A COMPANY has been formed to take over Clayesmore School, so as to establish it on a more permanent basis and on a more public footing.

* * *

ADDITIONAL grants for pupil-teachers are announced by the Board of Education: (1) £3 to the rate payable under Art. 24 of 1903 Regulations for each pupil-teacher; (2) £2 to the rate payable under Art. 28 (iii.) of the same Regulations; and (3) £1. 10s. to the rate payable under Art. 28 (b) of the 1904 Regulations.

* * *

A NEW Technical College and Secondary School, accommodating 250 pupils, has been opened at East Ham (March 18).

TEACHING OF GEOGRAPHY IN HIGHER CLASSES.

AT the Evening Meeting of the members of the College of Preceptors on March 15, Mr. J. R. LANGLEY in the chair, Prof. LYDE, of University College, London, gave the following lecture:—

In addressing a meeting of teachers on this subject I should like to dissociate myself from a number of persons who, without having had one hour's experience of ordinary school work, presume to criticize school teaching with all the confidence of ignorance. And, in putting before you what is in the nature of a specimen lesson, I wish to apologize to all except any very young teachers who may be present. There has been a very great improvement in recent years in the school teaching of geography, and it has come almost entirely from inside the profession—not from outside. Official ignorance of this improvement is characteristic, because it owes nothing to official inspiration. It is part of the notable effort made by teachers in recent years to improve their own methods. It began long before the various societies for the improvement of geographical teaching existed at all, and therefore could owe nothing in the first place to them. And I am not aware that it received any valuable encouragement even from the Royal Geographical Society.

As a schoolmaster, a public examiner, and an occasional inspector, I have followed the course of the improvement very closely since the year 1886 or 1887, and I know of only two, or possibly three, outside influences. As far as my knowledge goes, all the teachers who began the movement were using Mr. Chisholm's admirable "School Geography," and owed to it the improved lines on which they taught. In recent times I believe, too, that Mr. Mackinder's brilliant personal work has been inspiring. I have also seen some very good work done by teachers who had been through the Oxford School of Education—I do not mean the Oxford School of Geography.

Otherwise the improvement has come from inside the profession; but I think that it has been greater in junior than in senior teaching, except in the case of teachers who use no text-book. I am, as I have said before in this hall, a firm believer in books—for all classes except the very youngest and the highest—and I am an equally firm opponent of the various modern mechanical "aids" to geography teaching, except in the highest classes. I never used such aids myself; but they have a great attraction for many teachers, and at least they cannot do the harm to the imagination of senior pupils which they undoubtedly do to the imagination of juniors. Further, the seniors can grasp "lectures," and can take the requisite notes without an undue demand on one's forty-five to sixty minutes a week. At the same time, one assumes that the seniors have text-books, brought up from the junior classes, for reference; and one can frame the lecture to suit the corresponding pages of the text-book.

One's general scheme is drawn up, not for casual refugees who come to the school for a few terms to be "finished," but for those pupils whose parents have been wise enough to send them to you young and mean them to stay with you for some years. With all but the very youngest of these little people, when they first come, I assume that you have used a reader—I tried for five or six years to do without a reader, but gave up the attempt—and, if the reader is good, they have read and been taught correct simple ideas of great geographical areas and phenomena. Then, as they come into middle forms, they will have worked at fuller and more complex text-books; so that we may assume they have a considerable body of correct geographical knowledge, which has been acquired in such a way that it has been a perpetual training of the imagination and the reason.

What do you want to do with higher classes? The mental training must still be the same—if for no other reason than that righteousness is always the best policy. So we will continue to work on what we believe to be the most truly educational lines—not only because it is righteous, but also because it pays. A little less information—I don't call it knowledge—is a cheap price to pay for much more mental power. But, with your righteous eye on educational method, you may have the unrighteous one on the immediate future of the pupils, whose school-time is coming to a close. And, while your first aim is to turn out citizens with well balanced imaginations and well developed reasoning powers, you want also—subordinate to that—to turn them out with a good comprehensive grip on the geographical control of economic, historic, and political phenomena: in itself amongst the most interesting and most useful kinds of knowledge.

Now, your senior classes have all the necessary materials, even if latent; they may have forgotten details—and this forgetfulness is such a terrible source of worry, perfectly unnecessary worry, to many teachers, especially to women—but their minds cannot have lost the impress of the educational process gone through in acquiring those details, and the details themselves are easily revived. What you want, therefore, is to focus their knowledge—to help them to get clear, comprehensive ideas of natural geographic units as units, and of these units in relation to other units and the world in general.

For this reason, and with this object, I came to the conclusion that, whatever had to be omitted—a hard saying for over-conscientious teachers, again mainly women, who cannot bear to omit anything—I would not give more than one lesson, or lecture, on each area, and yet would make each area—unless flagrantly wanting in natural geographical unity—co-extensive with an important political country. Even, for instance, in the case of the Balkan Peninsula, it is feasible to treat, say, Serbia as controlling all the great river-valley railway routes, and Bulgaria as controlling all the important military roads across the "buffer" range of the Balkans. That is to say, you will emphasize the personal identity and the international relations of each area.

I do not believe at all in specializing in the geography of higher classes, and I don't believe greatly in introducing much new material. No amount of special knowledge, *e.g.*, of meteorology or cartography or geology or natural products, is as valuable as sound generalizations, in which the previous knowledge of the pupils is revived and brought to a focus. Nor do I think that the class-room is the place for the methodical reading and elucidation of some geographical author, even if he were twice as discursive as "Satan" Montgomery, and if your pupils could afford to buy all his works. I would not go on stuffing pupils with new matter up to their last day at school, any more than I would prepare them for examination without full revision for two or three months before the examination. You do not want to send them out into the world with a mass of undigested facts, which may or may not be digested eventually. You do want to round off their knowledge and unify it—to bring out its greatest possible utility—to make it not knowledge, but power, the power to interpret and use the known and to find out the unknown.

But I need not elaborate this. I feel sure that, whatever differences of method we may have, our aim is the same. And, therefore, it only remains for me to put before you, for your criticism and approval or disapproval, an example of the sort of generalization which I used to give. I choose Japan as the area, partly because of its political importance just now, but mainly because of its geographical position and character. I have no political views to express, even if I wished to express any.

It has been said that Europe, in its present form, is geographically a peninsula of Asia, and that Asia, in its present political condition, is a dependency of Europe; and the curious resemblance of Europe to Asia in some of its most significant features is at least as obvious as the political relations of the various parts of Asia are important. Amongst many other instances of resemblance, one has been specially noted recently—that between the two island kingdoms of Britain and Japan, to windward of their respective continents, in temperate latitudes, with a vast length of coast well provided with good ports, and with large supplies of coal behind these ports. These two Powers between them control the "sea mobility" of Asia, as Russia and Turkey control the "land mobility"; and they administer important agricultural areas, the general tone of which, as judged by the most characteristic creed, is antagonistic to that of the more pastoral areas administered by the Russian and Turkish Powers.

Russian Asia is almost entirely an area of Arctic and inland drainage, in which attempts to develop mobility by water are foredoomed to failure, and the conditions of which favour the rapid spread of climatic phenomena and thus involve great uniformity of climate; its characteristic tone is the Shamanism of its cold deserts.

The hot deserts of the Turkish and Persian area are, on the contrary, distinctively Muhammedan in "tone," and the peninsular and isthmian sites which they occupy abut on border seas, so that their inhabitants become naturally "buffers" between land and sea, continental and oceanic, influences.

The British control of the Indian Ocean rests on a base of agricultural wealth and typical Brahman "tone" in an area the rivers of which rise behind the edge of the great continental tableland, and therefore give access (more or less difficult) from

the oceanic to the continental domain. Eastward the Malay-Polynesian area represents purely oceanic influences; but the indentation of that area by a French territory, in the present state of political alliances, represents practically continental influences.

The fourth great division is typically that of the Yellow man, with a typically Buddhist "tone," and involving both oceanic and continental control, divided between the two most important representatives of the two great branches of the Yellow race; but in the meantime, owing mainly to the civilizing influence of oceanic environment and the political importance of oceanic control, the "lowlanders" have become a real power in Japan, while the Tibeto-Chinese "highlanders" are still stagnating.

By a rough classification, the yellow "lowlanders" may be divided into hunters and shepherds, and in past ages the occupations of the original Japanese, as of all the kindred peoples whose home was in the central lowlands of Northern Asia, would be hunting, fishing, and stock-raising—the typical industries still amongst their "cousins" in Lapland and Finland and in Eastern Siberia. Under conditions equally favourable to hunting and fishing, much more favourable to agriculture, and exceedingly unfavourable to pasture, the Japanese were almost bound to maintain their old skill in hunting and fishing, but to substitute agriculture for pastoral habits. This change, in itself a great one, was the natural result of the much greater change—from the heart of a continent to the isolation of an island home, from a vast extent of lowland to one of the most hilly areas of the Earth; and it was followed by a further change of "tone," by which Buddhism was imposed on Shintoism—the gorgeous on the simple, colour on form.

The islands are a portion of an old shore of Asia, and are formed mainly of very old rock rising to a considerable height out of very deep water. The oldness of the rock suggests a poor soil, but a probability of mineral wealth; and the immense difference of level between the mountain peaks and the neighbouring ocean floor suggests, in such a climate, distinct liability to seismic and volcanic phenomena. The great mass of this old rock is of igneous origin, but of two very different types. The base consists of rock which was cooled very slowly at great depths below the surface of the Earth, and afterwards upheaved by side-pressure due to the cooling of the Earth's crust; such rock so upheaved in such a climate is bound to become very rich in china-clay, and will probably be rich in copper and tin. The superstructure is volcanic, cooled very quickly above the surface of the Earth, and deficient in minerals except sulphur and kindred substances. The relation between the granite base and the volcanic cones makes the passes across the country comparatively low, and affords very picturesque scenic effects—common objects in Japanese art.

It must not be inferred, however, that the volcanic area in Japan is very extensive; the contrary is the case. But the volcanic districts are very distinct, and in the most natural places, e.g., at the two ends of the islands, where mountainous spurs descend into very deep water, and along a curious "broken back" in the centre of the main island. The only volcano of the former class that is particularly interesting is Aso-san, which has the largest crater known in the world; but the latter class contains, between Tokyo (Yedo) and Toyama ("Little Yedo")—so called because of the resemblance of the Noto peninsula to that of Kadsusa—the best known peaks in Japan.

The "Great Ditch," which marks the line of activity, runs from Fuji-Yama ("Heaven"), past Asama-yama, to Tateyama ("Hell"). The precise point on Tateyama from which the most devilish noises and vapours come is called definitely Figoku ("Hell"); like Fuji-yama, it is the objective of countless pilgrimages, and *on dit* that "the view from Hell is as fine as that from Heaven, but 200 feet lower."

Volcanic eruptions seldom occur, but are destructive; earthquakes are daily occurrences, but usually slight. But there are exceptions to both statements. The famous series of earthquakes which in 1891-2 formed a "Little Ditch" parallel to the "Great Ditch," between Mia Ura and Wakasa Bay, included 1,495 distinct shocks at Nagoya and the appalling number of 2,588 at Gifu, every house along the twenty-mile road between the two towns being overturned! And the resultant "Little Ditch" curiously confirmed the local superstition that "Earthquakes are caused by the burrowing of a huge caterpillar."

The latitude of the chief islands and their sea environment work strongly in favour of an even temperate climate, but the position between the huge land mass of Eurasia and the equally

huge ocean expanse of the Pacific involves very marked contrasts: and, though the actual extremes are not great, the islands are cooler and damper than other islands in the same latitude, e.g., the Azores.

The high humidity is due to the narrowness of the islands compared with their length, the position of the mountains so near the coast and at right angles to the two prevailing winds—the N.W. wind outflowing from the Siberian "Pole of Cold" in winter, and the S.E. "Monsoon" reaction in summer—and the warmth of the Kuro Siwo, or "Dark (Blue) Stream." The low average temperature is due partly to the pale (green) Kurile Current, or Chishima Siwo, "Current of the Thousand Isles," and partly to the fact that their land-wind, unlike our warming Sou'-Westers, blows in winter and is icy cold, while their sea-wind in summer tends to lower rather than raise the temperature.

From the position, physical character, and climate of the islands, the lecturer went on to deduce the typical products and scenery, laying special stress on the extent to which dense undergrowth crowds out pastoral grasses—the suitability of the climate and the river water for various textile operations—and the highly developed artistic sense of the people.

Prof. Lyde having replied to questions put to him by members of the audience, a vote of thanks to the lecturer concluded the proceedings.

THE EDUCATIONAL LADDER IN SCOTLAND.

SOME OF THE RUNGS MISSING.

A REMARKABLE address was delivered by Prof. Ramsay, of Glasgow, President of the Classical Association of Scotland, at the general meeting of the Association held in Marischal College, Aberdeen, on March 11. Reserving for another occasion the question of compulsory Greek at Oxford and Cambridge, which "he thought had been put very badly, very falsely, very illogically before the country," he proceeded to speak of "the banishment of the vital secondary subjects—especially classics and mathematics, and to some extent modern languages also—from many of those country schools which had been for generations the pride of Scotland, and especially of the northern counties"; or, if banishment were too strong a word, yet "the discouragement of those subjects, or, at least, the half-hearted and side-door encouragement meted out to them in consequence of the Code of 1903."

THE EDUCATIONAL BÂTON.

Prof. Ramsay, however, acknowledged with satisfaction that in the working out of the Code there had been shown, on the part of those in whose hands their educational destiny lay, a desire to abate somewhat from the extreme rigidity of the terms in which it was set forth, and to recognize somewhat the cardinal principle on which all statesmanlike reform must proceed, viz., that in establishing any new system, with new ends, many of which must be problematical and might prove of doubtful utility, true wisdom consists in preserving, not in wiping away, what has proved itself admirable in the old. Now, he ventured to say that there had been nothing more admirable in the Scottish system of education, nothing so nationally beneficial, nothing so unique, as the fact that every lad of parts, in any part of the country, might have at his own door the opportunity of having his intellectual powers awakened and developed by entering upon the study of those severer subjects, and laying the foundation of that kind of mental discipline, through which alone a man could make the most of the powers within him and rise to positions of usefulness and honour, whether in public or private life. Not every one of Napoleon's private soldiers rose to be a marshal; but, as every one of them was said to have a *bâton* in his knapsack, so he would like to make every young scholar in Scotland feel that he carried an educational *bâton* in the bag that hung upon his back.

Prof. Ramsay recalled the fight against Mr. Lowe's Revised Code, "which knew nothing of higher education, and which recognized no claim for State education at all except for the children of the *bona fide* labouring poor." The Senate of Glasgow University took up the question in 1868-69, pointing out how largely the universities were recruited from parish and other elementary schools, and how widely higher education had hitherto been diffused in Scotland, and making strong protest against the reactionary proposals.

HIGHER EDUCATION IN ELEMENTARY SCHOOLS.

Year by year up to 1872 they agitated against this view; the other universities joined them in deputation upon deputation to headquarters; they quoted, even then, the admirable results produced under the Dick and Milne bequests [in certain north-eastern counties], as showing that the existence of a higher education in a school raised its whole tone and

character; and, more important still, that, as a rule, the schools that were best in their higher work were best in their elementary work also. Well, in the end they succeeded in obtaining the famous words included in Section 67 of the Act of 1872: "that the standard hitherto maintained in the elementary schools of Scotland should not be lowered; and, as far as possible, as high a standard should be maintained in all the new schools to be provided under the new Act." That section had ever since been regarded as the educational Palladium of every Scots boy or girl, giving every one of them the right to have the chance of a higher education in the ordinary schools of the country. There was many a hard tussle to get these words inserted; they should never have gained them at all but through the sympathy of Sir Francis Sandford, who was at that time head of the English Department, and who never failed in sympathy for Scottish education in all its branches.

Prof. Ramsay reproduced some of the striking facts then exhibited by Glasgow University to demonstrate the connexion between the University and the elementary schools.

GLASGOW UNIVERSITY AND ELEMENTARY SCHOOLS.

In the year 1868 they ascertained that out of 568 students in the Arts Faculty no less than 235 had been educated entirely at elementary schools; 130 more had been partially so educated—not counting 49 educated privately or outside Scotland—and only 130 had been entirely educated at secondary schools. Taking the results of all the faculties combined, the proportions were almost the same. Excluding foreigners and those privately educated, 45 per cent. of their students had gained the whole, and 25 per cent. more than half, of their previous education at elementary schools. Not more than 20 per cent. came from secondary schools. Of the whole number of Arts students in that same year nearly one-fourth—22 per cent.—were teachers, many of them already engaged in school work, and nearly the whole of these had been trained at elementary schools. It would be interesting to see how things stood now. He had always carefully noted the school antecedents of his students, and he found that the above proportions remained pretty constant until the passing of the Universities Act of 1889. . . . Thus, taking the period of twenty-five years before the passing of the late Universities Act, students educated entirely at elementary schools distinctly outnumbered those from secondary schools, and, if those educated privately or outside Scotland were omitted, formed nearly one-half of the entire number. What was the state of things now? The state of things now, from causes which they all understood, was that, apart from those who were teachers, the scholar wholly educated at an elementary school had practically been wiped out of existence. In the present session, 1904-5, leaving women students out of account, there were 206 students in the Latin class. Of this number 190 had passed the Higher Preliminary in Latin: the remaining 16 had failed to pass that examination and were attending as private students not qualified for the degree course. Of the 190 students qualified for the M.A. course, 112 had a full course of three years or more at a secondary school, including a few higher-grade schools among the number. Of the remainder, no less than 65 had been pupil-teachers (one an assistant teacher) mostly at elementary, some at higher-grade, schools; 12 students who were not teachers had a mixed education, and only 5 in all, not being teachers, had received their education at public elementary schools. Thus a revolution had been accomplished, and he would like the public to realize its extent.

THE CAUSE OF THE REVOLUTION.

They all knew the main cause of it: it was that the Universities, in the interests of higher education, had imposed a severe test for entrance to the degree course; that the numbers attending the Universities had in consequence been greatly diminished: that schools which were wont to prepare scholars for the Universities could prepare them no more, and that a large class who used to find their way open to the University found it no longer open to them. Meanwhile, the State had done nothing to repair this particular deficiency, except for the benefit of those whom it had thirled to the teaching profession. Instead of that, it seemed willing to withdraw opportunities of instruction in university subjects from schools and districts which enjoyed them before. It was ready to impose on clever boys and girls of twelve, as a condition of higher knowledge, the penalty of exile from their homes; and, instead of building upon the experience of the past and strengthening the teaching of the subjects which had heretofore been found the most fruitful, was giving way to that craze for novelties which was the besetting foible of our time, substituting for the old tried courses new courses of untried educational utility—courses which, as had lately been well said, had been "born of industrial panic."

In order to show how the time-honoured system might have been maintained, Prof. Ramsay referred to "the remarkable and extraordinarily interesting" Report by Prof. Laurie on the working of the Dick Bequest Trust from 1890 to 1904.

THE EXAMPLE OF THE DICK BEQUEST TRUST.

This report was an abiding monument to Prof. Laurie; and he (Prof. Ramsay) could not express too strongly his agreement with all the educational aims and principles set forth in it. How excellent and how simple was the system of the bequest that he had administered! First, a modest

payment for good qualifications on the part of the teacher; second, a modest capitation grant upon the whole number receiving efficient education in higher subjects; third, a further modest capitation grant for passing certain definite examinations; fourth, a satisfactory report upon the work of the school as a whole. And how admirable the results! During the ten years ended December, 1888, an average of 86 boys and girls annually were passed on from the rural schools in the three counties to the more skilled occupations and professions. In 1903 the proportion was the same, except that more scholars went on to the training colleges. In that year the total number of scholars attending advanced classes in the schools of the trust (all qualified by Merit Certificate or equivalent) was 2,609, and these earned between them 1,358 Leaving Certificates of all grades, whether Lower, Higher, or Honours. This report afforded most stimulating, and at the same time most melancholy, reading—most stimulating, because it showed how much could be done in the way of developing the brains of a whole countryside, and of lifting up Nature's *élite* into the higher paths of life, by a very moderate expenditure of money, if only it was expended on wise principles; most melancholy, because it was sad to reflect that in a generation which was all agog for education, which had added millions to our educational budget, no precedent had been taken, no lesson learnt from the administration of a scheme which had stood forth on a small scale as a beacon light to educational enthusiasts for three-quarters of a century; and that at the present moment when the educational age had been extended to fourteen, when thousands of new scholars were, in consequence, being taken into our schools, when there was actually no limit to what the country was ready to pay for educational objects—that at such a moment the latest improvements in our educational laws threatened seriously to turn out of country schools—or of some of them—the very subjects which had given them their pre-eminence. Nay, more: these same studies, on which Scottish brain had been so largely fed and Scottish prosperity so largely promoted, were not even given a definitely acknowledged place as one of the supplementary courses; were not even allowed to rank on an equality with the various subjects—many of them excellent subjects, some of them fancy subjects, and as yet quite untested subjects—which had been introduced into the new system.

"Now what were the reasons for this apparently retrograde movement, for this cutting down of the opportunities of the higher learning open to the country school? How far was it a necessary condition of that better organization and consolidation of our educational system as a whole which we all desired?"

CRITICISM OF SIR HENRY CRAIK.

He read Sir Henry Craik's remarks [made on February 18, at Aberdeen] with great interest. Sir Henry proclaimed himself a believer in classical education; but when he (Prof. Ramsay) read that men who had worked early and late, probably before hours and after hours, to help on a few promising scholars to higher things, and to keep up the reputation of their school, met with no encouragement, but were twitted with having so poor an aim as that of bringing in £6, or £8, or £10 to the income of the school, he felt, he confessed, that the power of official ebilliness had sunk to its zero. Sir Henry further laid great stress on the difficulties in the way of the Department, and he explained the difficulties in the way of the Department created by the sudden influx of new scholars up to the age of fourteen. Now he (Prof. Ramsay) took it that they were all in favour of a better grouping, a better correlation of schools. They had all desired to see secondary schools of every kind better equipped, better differentiated, and drawing to themselves under natural conditions as many scholars as could conveniently attend them. They also fully realized the difficulties created by the sudden influx of new scholars up to the age of fourteen, the great majority of whom must be educated with a view to the lives they would have to lead, and not to any other. But, if many new scholars had to be provided for, was that any reason why scholars of the old class should be worse off than they were before? And might not many of these new scholars be themselves of superior parts, with the ability to rise in life like so many a scholar of old? Did that argument not savour somewhat of the grand old Tory principle that a boy should be educated suitably to his station in life, and not so as to help him to rise above it? And, if so many more were left on till fourteen, was not that a reason why a greater proportion, not a smaller proportion, of the whole number—all who showed early any decided ability—should be given a chance at a sufficiently early age of beginning the higher subjects, so as to have made some good progress in them by the age of thirteen or fourteen? To gather into secondary schools, or into higher-grade schools, as many scholars as possible, and at as early an age as possible, was excellent; but many districts, many homes, had no such school within reach.

PROF. RAMSAY'S SUGGESTIONS.

If, then, promising children could not, and ought not to, be removed from their homes too soon, provision ought to be made in all country districts which had no higher school within reach, to let such pupils have the chance of beginning, before twelve years of age, the higher University subjects—languages, ancient or modern, mathematics, English, and history. Let intelligent Nature study form a part of all courses, but let the special and extra prominence and extra time now given to science, whose educational value has yet to be appraised, be departed from; let

every higher-grade school be allowed to have the option of a language and mathematical course to rank upon an equality with the present commercial science courses; let science be removed as a necessary condition from the course required for the Intermediate Certificate: in short, let the different sets of subjects, the old and the new, be put upon an equality, and treated in the same way financially and otherwise, and he had no doubt whatever which of them would turn out the best men, which would be found to provide the finer intellectual discipline and to supply what was most needed to maintain the intellectual stamina of the nation.

COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION—CLASS LIST.

MARCH, 1905.

THE Supplementary Examination by the College of Preceptors for Certificates was held on the 7th, 8th, and 9th of March, in London, and at seven other local centres, viz., Birmingham, Bristol, Cardiff, Inverness, Leeds, Liverpool, and Manchester. The following candidates obtained Certificates:—

FIRST CLASS [OR SENIOR].

Pass Division.

| al = Algebra. | h = English History. |
| f = French. | l = Latin. |
| gm = Geometry. | |

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on March 18. Present: Sir Philip Magnus, Vice-President, in the Chair; Prof. Adams, Mr. Armitage Smith, Mr. Barlet, Rev. Canon Bell, Rev. J. B. Blomfield, Mr. Bowen, Mr. E. A. Butler, Mr. Charles, Mr. Easterbrook, Mr. Eve, Mr. Hawe, Miss Jebb, Mr. Kelland, Mr. Ladell, Miss Lawford, Dr. McClure, Rev. G. E. Mackie, Mr. Millar

Inglis, Mr. Morgan, Mr. Pinches, Miss Punnett, Mr. Rule, Rev. Dr. Scott, Mr. Starbuck, and Mr. Storr.

The minutes of the last meeting were read and confirmed.

The Secretary reported the cases of a number of persons to whom the privileges of membership of the College had been accorded under Section II., Clause 5, of the By-Laws, but who were found not to be at present engaged in teaching in secondary schools. The names of these were directed to be transferred to the list of holders of diplomas who are not members of the College.

The Report of the Examination Committee was adopted, and the following appointments to examinerships were made:—Prof. J. W. Adamson, B.A., in Theory and Practice of Education; Mr. F. Ritchie, M.A., in Latin; Dr. S. Hirsch, in Hebrew; and Mr. B. Proper, in Dutch.

The report of the Special Committee appointed to consider the operation of the Education Act of 1902 in the case of private and proprietary schools was adopted.—The report stated that, on the whole, the evidence received seemed to indicate that many of the new Authorities misapprehended the nature of the duties laid upon them by the Act so far as concerned secondary education. They appeared to consider it their duty to provide such education within their area, rather than to survey the existing supply and then to protect and link together all existing efficient schools, only providing additional schools where an actual lack of them existed. The latter policy was evidently that contemplated by Parliament, and must appear, on grounds both of equity and economy, the right course for Local Authorities to follow. It was resolved that this point of view should be urged upon Local Authorities whenever opportunity should arise.

An interim report of the representatives of the College on the Joint Federation Conference Committee was received.

Mr. J. Lawrence, M.A., D.Lit., and Mr. G. T. Moody, D.Sc., F.I.C., F.C.S., were elected members of the Council.

The following persons were elected members of the College:—

- Mr. T. A. D'Arcy, L.C.P., 21 Clyde Road, Redland, Bristol.
- Mr. C. H. Edley-Morton, Lytham College, Lytham, Lancs.
- Mr. A. Howes, A.C.P., 63 Bath Road, Cinderhill, Bilston, Staffs.
- Mr. F. E. Pierpoint, 65 Tufnell Park, N.
- Mr. C. Taylor, 32 Langdon Park Road, Highgate, N.
- Mr. B. L. Tourle, A.C.P., 66 Ranelagh Road, Tottenham, N.

The following books have been presented to the Library since the last meeting of the Council:—

- By EDWARD ARNOLD.—Steps to Literature, Books I.–VI.; Nettell's Introduction to Elementary Statics.
- By the CLARENDON PRESS.—Chessex's De la Landelle's Une Haine à Bord; Goodridge's Gautier's Voyage en Espagne.
- By METHUEN & CO.—Austen's Sense and Sensibility; Bacon's Essays and The New Atlantis; Bunyan's Pilgrim's Progress; Gibbon's Decline and Fall of the Roman Empire, Vol. I.; Graves's Translation of the Meditations of Marcus Aurelius; Shakespeare's Works, Vol. I.
- By RELFE BROS.—Walker and Carter's Local Examination History of England.
- By RIVINGTONS.—Hartog's Anecdotes et Récits; Longland's French Unseens (Junior, Book II., and Senior, Book II.).
- Calendar of the University of Liverpool.

FOUR-FIGURE LOGARITHMS.

By R. F. DAVIS, M.A.

THE advantage of the use of these tables is very strikingly illustrated by the following question, which is taken from actual business experience. A comparison of the two methods of calculation leads to the conclusion that the first is more compact and less liable to error than the second, which is that adopted by the ordinary business clerk:—

“Find the cost of a Turkey carpet measuring 13 ft. 7 in. by 10 ft. 3 in. at 16s. 6d. the square yard.”

Solution I. (worked by logarithms).

$$\begin{aligned} \log 163 \text{ (inches)} &= 2.2122 \\ \log 123 \text{ (inches)} &= 2.0899 \\ \log 198 \text{ (pence)} &= 2.2967 \\ &A = 6.5072 \\ &1.1060 = \log 12.76 \end{aligned}$$

Answer £12. 15s. 2d.

A is the log of $1/(36 \times 36 \times 240)$, and is kept tabulated for all calculations of this type.

Solution II. (worked by duodecimals).

13	7				
10	3				
135	10			15 at 16s.	= 12 0 0
				15 at 6d.	= 0 7 6

REVIEWS.

FROM SCANDINAVIA TO JAPAN.

"Cambridge Historical Series."—(1) *Scandinavia*. By R. Nisbet Bain. (2) *Europe and the Far East*. By Sir Robert K. Douglas, Keeper of Oriental Printed Books and MSS. at the British Museum, and Professor of Chinese in King's College, London. (7s. 6d. each. Cambridge University Press.)

(1) A very short chapter sketches the course of events down to the accession of Christian II. of Denmark in 1513, at which point Mr. Nisbet Bain expands the treatment, furnishing a reasonably ample account of the political history of the three kingdoms down to 1900. He has already traversed considerable parts of the subject in other esteemed works, the promise of which is most creditably fulfilled in the matter and the form of the present volume—the last nine pages excepted. He shows himself quite competent to deal with the authoritative documents in Russian and Polish as well as in the languages of Denmark, Norway, and Sweden, and to set forth the significance of the movements in plain and agreeable narrative. The interest is extremely varied—political, constitutional, and personal: "the whole story has its own peculiar dramatic interest, for it is a chronicle of the ambitions and the achievements of a long series of exceptionally great men, master magicians of statecraft, who wrought marvels with the feeblest material resources"; and there are incidental flashes of romance. Yet, in spite of the extraordinary qualities and achievements of leading men, the book appears to Mr. Nisbet Bain but "the history of the frustration of a great Baltic Empire." The Stockholm Massacre (1520) drove a fatal wedge of national hatred between Sweden and Denmark at a time when political divergences seemed capable of friendly adjustment, and eleven fierce wars through a couple of centuries wasted the strength of both nations while the Baltic lands from the Weser to the Vistula lay open to incorporation in a united Scandinavian State. Still, we must stop to ask what the people of the Baltic lands would have thought of the matter? At the same time, "What might not have been effected by Sweden and Denmark together—two sister kingdoms with the same religion, similar institutions, and practically the same language—when, notwithstanding their mutually obstructive and destructive rivalry, one of them (Sweden) actually succeeded in establishing for a time an Empire of the first rank—an Empire only destroyed by the banded might of Eastern and Central Europe after a twenty years' struggle?" It is amusing to be reminded of a declaration of war by Sweden against Great Britain on November 13, 1810.

It is only at a late period that Norway comes into the foreground. At the accession of the heroic and unfortunate Christian IV. of Denmark (1588), Mr. Nisbet Bain tells us, "the detachment of Sweden had been more than compensated for by the absorption of Norway"; and some three-quarters of a century later, at the Revolution of 1660, "Norway ceased to be a subject principality," and "constitutionally was placed on an equality with Denmark, united with but not subordinate to it." True enough, Christian's (or rather his Rigsraad's) Charter (1536) pronounced Norway "a dependency of the Danish realm and Crown for all time"; but Mr. Nisbet Bain himself points out that "nevertheless this provision remained a dead letter." The "absorption," then, and even the "subjection," of Norway need to be taken with substantial qualification—if, indeed, the terms ought to be used at all. The administration, however, was common, and in Danish hands, and the Danish obstruction of the far-seeing plans of Governor-General Gyldenlöve (1664–79) is significant for the later course of national aspirations, which were not formally realized till 1814. It is at this point (1814) that we begin to distrust the guidance of Mr. Nisbet Bain. He seems here to lose sight of the fundamentally important intention of the series: Dr. Prothero says that "the series is intended for the use of persons anxious to understand the nature of existing political conditions." Now when Mr. Nisbet Bain speaks of "a semi-foreign dynasty imposed upon Norway by force" we quite recognize that Karl Johan (Bernadotte) had bigger battalions in the background at the Convention of Moss, but at the same time his acceptance of the essential provisions of the Eidsvold Constitution shows a full Norwegian counterpoise, and the preamble of the Act of Union expressly states that the union was accomplished "not by force of arms, but by free conviction." Mr. Nisbet Bain says that ever since the Union Norway has

"persistently endeavoured to obtain absolute political equality with Sweden, even at the risk of a rupture." But we are not aware that Norway has claimed anything that she is not entitled to claim, or that, in making claims, she has ever departed from constitutional procedure. Both the Constitution and the Act of Union recognize Norway as "a free, independent, indivisible, and inalienable kingdom, united with Sweden under one king." What have been the bones of contention? Take the diplomatic and consular services. Mr. Nisbet Bain speaks of the "perfectly legitimate declaration" of the Swedish Government "that the consular and diplomatic unity of both countries must be regarded as a condition precedent to any reform of the Act of Union." But the Norwegians do not want to "reform" the Act of Union; and the opposite declaration on the part of the Norwegian Government would be no less "legitimate." There is nothing about consular and diplomatic unity in the Act of Union, and the demand for consular and diplomatic separation is perfectly constitutional. At first the consular and diplomatic affairs of Norway were tacitly left in charge of the Swedish Foreign Office (just as they might have been entrusted to any other foreigners for convenience), no difficulty appearing at the time likely to arise; but Norway has never renounced her right to a separate system. On the contrary, she has steadily asserted it, and Sweden could not deny it. Mr. Nisbet Bain, writing for the instruction of readers as to "existing political conditions," actually tells us that "a separate consular service for Norway has (1903) been conceded." But how "conceded"? The two Governments came to an agreement, and made an arrangement for carrying it out; but the scheme was wrecked by Swedish hands on the details of execution, and now the position "conceded" in 1903 is the burning question of the day. Again, there is the "flag" question. This is much too complicated for adequate discussion here, and perhaps limits of space prevented Mr. Nisbet Bain from making the meaning of the statute of 1844 as clear as the late Prof. Getz has done. But how the statute of 1898, which took the symbol of union out of the commercial flag, can be described as "the unconstitutional decree of the Storthing" is beyond our understanding; and the King's sanction of its promulgation, though he disagreed with it, was entirely constitutional (Clause 79). Mr. Nisbet Bain touches very closely the real cause of all the trouble between the two countries when he speaks of "the strong Conservative element in the [Swedish] Rigsdag," which "has led it to regard with disfavour every liberal project of constitutional and electoral reform" at home, and, he might have added, fostered an aggressive desire to lord it over the "free and independent" kingdom of Norway. The obscurantists of the Rigsdag naturally enough fulminate offensively about "the Norwegian rebels," but Mr. Nisbet Bain, if he must quote them, should at least have pointed out that the expression is wholly at variance with the facts. It is very unfortunate, at the present juncture, that he should not have seized the opportunity of presenting to the British public—what is so much needed—a really satisfactory account of the relations between Norway and Sweden. Let him rewrite his last nine pages, not in the light of deceptive party representations, but on the basis of constitutional facts, and then our approval of his volume will be very cordial. The five maps are most useful.

(2) Unhappily we must also join issue with Sir Robert Douglas on a portion of his volume. The work is substantially an account of Far Eastern history, especially in relation to Europe, during the past three-quarters of a century, a brief sketch bringing events down to the beginnings of continuous Western intercourse with China and Japan. Sir Robert's narrative is fluent and vivid. What we regret is that he should not have revised his earlier views of certain very important episodes in the British dealings with the Chinese in the second generation of last century. The events that led up to and landed Great Britain in the first and second Chinese Wars may fairly be said to influence even now the relations of Great Britain and China; and, as Dr. Prothero, the editor of this excellent historical series, admonishes us that "the real significance of contemporary events cannot be grasped unless the historical causes which led to them are known," we are compelled to look more closely at the treatment of such episodes of living influence.

The handling of the miserable mission of Lord Napier (1833–4) first brings us to an obstinate stand. Lord Napier was sent out as a specially impressive British Superintendent of Trade at Canton—the only Chinese port then open to British commerce—with instructions to see whether British trade might not be extended

to other Chinese ports, for which object "the establishment of direct communication with the Imperial Court of Peking would be desirable." Sir Robert Douglas tells how the Chinese Governor of Canton "contemptuously rejected" Lord Napier's letter announcing his arrival, issued notices denouncing him as "a barbarian eye" and otherwise, and published a shockingly derogatory proclamation styling him "a lawless foreign slave," "a dog barbarian of an outside nation," and so forth; and how the Chinese, after gaining their main contention, "inflicted every possible annoyance upon him, and so harassed him, mentally and bodily, that he reached Macao only to die" (October 11, 1834). This is lamentable enough, certainly; and we at once look for the Chinese version of affairs. But Sir Robert merely quotes part of the Governor's proclamation (without the events that led up to it). Well, here is the essential part of Sir Robert's quotation:

Being an outside savage superintendent and a person in an official situation, you should have some knowledge of propriety and law. . . . Can you not obey the regulations of the Empire? You presume to break through the barrier passes, going out and in at your pleasure, a great infringement of the rules and prohibitions. . . .

Now, is this true, or is it not true? Sir Robert, unfortunately, does not examine into the truth of these allegations; but he does not deny them: they cannot be denied. Is it, then, to be said in history that even a British officer—a British lord—trampling upon "the rules and prohibitions" of a foreign State in one of its principal towns, does not deserve to be handled with scant ceremony? What did Lord Napier himself say, in a letter to the Home Government? This:

Four edicts have been let off against me for landing without a red chop, or permit. . . . Suppose a Chinaman, or any other man, were to land under similar circumstances at Whitehall, your Lordship would not allow him to loiter as they have permitted me.

Sir Robert Douglas represents the Chinese as oppressive; Lord Napier himself acknowledges that they have treated him with laughable forbearance. Moreover, did not Lord Napier urge the Government to "an undertaking" that would be "worthy of the greatness and power of England"—an undertaking that "presupposed all the horrors of a bloody war against a defenceless people"? Sir Robert, we must frankly say, wastes pity upon an officer of this temper. We have no space to set out the successive steps of this disgraceful episode, but we invite Sir Robert and (with more hope) his editor to consult the public records on the matter, and do historical justice, at whatever cost of patriotic feeling.

As to the real cause of the first Chinese War, Sir Robert is indistinct. While he admits that "the Chinese Government was evidently sincere in its desire to put an end to the opium traffic," and cannot question the rightness of their policy or the propriety of the action of Lin in seizing the 20,283 chests of opium, one cannot but feel that his narrative diverts attention from opium as the real cause of the war, by putting forward miscellaneous acts of violence, "the obstinate pride of Lin" (with tactical mistakes that have had curious parallel since), and the natural determination of the Chinese to keep out the British, or to control their licence of action. A "history" ought to set out very explicitly the origins of such a far-reaching event.

Again, as to the second Chinese War, the real facts of origin are not distinctly and pointedly presented; and the occasion of hostilities is not historically stated. "A British lorcha named the 'Arrow' . . . How 'British'?" There was nothing British about her, except the master, who was not aboard at the time of the Chinese visit, and the flag, which she had no right to hoist. The lorcha was properly overhauled as a Chinese piratical craft. Commissioner Yeh acted entirely within his rights. The occasion of this war was contemptible and unjust; and the cause is not far to seek in the Correspondence relative to Lord Elgin's mission.

We deplore the strangely perverse—mistakenly "patriotic"—treatment of so important a section of the volume, and we cannot doubt that it will be remedied in a second edition. The bibliography is extensive and serviceable, and there are four very welcome maps.

SIX GREAT ENGLISHMEN.

Great Englishmen of the Sixteenth Century. By Sidney Lee, Litt.D. (7s. 6d. net. Constable.)

The contents of the volume are based on a series of eight lectures delivered by Dr. Lee at the Lowell Institute, Boston, in the spring of 1903; and, although they embody fuller details and the fruits of much original research, they are specially fitted "to

interest the cultivated reader of general intelligence rather than the expert." No doubt the book will soon be put into a popular edition, which will spread its influence much more widely, and attract very general attention to the extraordinary achievements of the men selected for portrayal; but even in its present liberal outfit it will make a great impression. The introductory chapter, which is practically new, sketches comprehensively and firmly the intellectual spirit that characterized the sixteenth century, with an analysis of the causes of the awakening and an indication of the ethical paradox of the era. The six representative men are More, Sidney, Raleigh, Spenser, Bacon, and Shakespeare—very nearly in the order of ascending greatness. Shakespeare obtains an additional chapter, treating of the foreign influences on his work, direct and diffused. There is no need to go into details: the biographies are based on the most recent knowledge and worked out with a steadily cautious intellectual restraint, which is nowhere more conspicuous, as it is nowhere more necessary, than in the treatment of Shakespeare's career and of the foreign influences on him. Dr. Lee gives up the paradox of More's life: "that the man who, by an airy effort of the imagination, devised the new and revolutionary ideal of 'Utopia' should end his days on the scaffold as a martyr to ancient beliefs which shackled man's intellect and denied freedom to man's thought is one of history's perplexing ironies." Yet his function of biographer should have impelled him to an attempt at analysis: the case of More's friend, Erasmus, would suggest a tolerably fair parallel; and, indeed, the basis of some hopeful inquiry may be found in Dr. Lee's account of More's experiences at Oxford and during his first years at the Bar. Sidney and Raleigh, with all their literary interest, engage us on the practical side of the activities of the time, exhibiting the potency of the chivalrous and the daring, in spite of no great direct permanent achievement, and, in the case of the latter, in spite of rebellious impulses against the barriers of legality and morality. Spenser's work, of course, "is an inexhaustible fountain of poetic inspiration, and none can define the limits of its influence." "The intellect of both Shakespeare and Bacon may well be termed miraculous," but that both intellects "were housed in a single brain" Dr. Lee pronounces "an irresponsibly fantastic dream, which lies outside the limits of reason." Highest of all he places Shakespeare's "mighty and unique achievement," illustrating it on the lines of his separate study of the poet's life, with fresh additional points of suggestion. If not always penetrating in criticism, the volume shows very careful, industrious, discriminating, and to some extent original work; and it is written in a simple and quietly interesting style. The six portraits are excellently reproduced, and are very welcome.

GENERAL NOTICES.

MATHEMATICS.

First Lessons in Observational Geometry. By Mrs. W. N. Shaw. (2s. Longmans.)

In a series of lessons supposed to be given to a class of children of eleven or more years of age, Mrs. Shaw has shown admirably the kind of instruction suitable for the preliminary course in geometry about which we have so often heard of late. Much of the want of success which has marked the past teaching of the subject is traced by the writer to the persistent attempt to dissociate geometry from all other known sciences by considering it from the beginner's standpoint, as if purely deductive in its process, whereas, in reality, inductive methods should be allowed to play, as elsewhere, an important part. Even if it be admitted that an untaught child is certain to become acquainted with numerous geometrical truths, such knowledge does not, and cannot, constitute a sufficient preparation for deductive research; no desultory acquirement of isolated facts can properly take the place of a more or less continuous series of observations directed so that the results may lead to the formulation of important principles. The writer shows in her lessons how fully she realizes the truth that in ideal education there is an imperative demand for consistent and constant effort to obtain from the pupil the raw material out of which knowledge in finished form is to be fashioned. Teachers of geometry—and other teachers also—will find the pages of Mrs. Shaw's little book very interesting and very suggestive, especially if they will remember that the writer's aim is to indicate useful methods rather than to prescribe a definite course of study. A most valuable hint is conveyed in the advice that instruction such as that exemplified should not be allowed to progress too rapidly. The facts of geometry, we are reminded, are wont to present themselves in quick succession, and there is a great risk of their being but imperfectly understood, unless care is taken to dwell sufficiently long on each.

The Theory of Determinants. By Robert Forsyth Scott, M.A. Second Edition, revised by G. B. Mathews, M.A., F.R.S. (9s. net. Cambridge University Press.)

The new and revised edition contains some interesting additions to the text. The reviser, Prof. G. B. Mathews, has been very successful in his attempt to accomplish his task and at the same time to preserve the essential character and scope of the original work. Besides several preliminary pages, written with a view to lessening the difficulty of a first approach to the subject, the fresh matter includes important chapters devoted to the discussion of the arithmetical properties of determinants, to the consideration of determinants of infinite order, and to the elementary investigation of the theory of bilinear forms. The substitution of the early history for the bibliography of the subject is also noteworthy, for, with the reviser's desire not to increase materially the size of the work, space for both history and bibliography could not have been found; and the bibliography may be readily obtained by consulting Dr. Muir's excellent and widely circulated text-book.

The Teacher's Blackboard Arithmetic, Part I. By "Tact." (1s. 6d. Blackie.)

The little book will probably be of considerable use to many teachers, and more especially to those as yet inexperienced in the art of imparting to young pupils the first principles of number and arithmetic. The author has evidently given very careful thought to his subject, and makes a number of valuable suggestions.

ENGLISH READERS.

Messrs. Horace Marshall & Son issue the *Temple Infant Readers*—a series of three books (4d., 4d., and 6d.), constructed mainly on the principle of exercise on the various vowels successively, graduated with care, and tastefully got up.—Their *Preparatory Temple Reader*, edited by Miss C. L. Thomson (1s. 6d.), is intended for children of seven to nine, and consists mainly of folk-lore stories and other prose and verse passages more or less tinged with mystery and romance—very attractive reading. The numerous original illustrations are in delicate style, the type is bold and round, and the binding is flexible.

The New Temple Reader, edited by E. E. Speight, B.A. (1s. 6d. net, Horace Marshall), is meant to form "an introduction to the comparative study of literature." The passages are chosen from countries wide apart, in order "to illustrate the progress of the main stream of literature down the centuries." They will widen the outlook, and attract by their freshness and power.—*Hakluyt's English Voyages*, selected and edited (with introduction, notes, and glossary) by E. E. Speight, B.A., F.R.G.S. (2s. 6d., Horace Marshall), a book of stirring adventure, is sure to be read with avidity. Sir Clements Markham, in an appreciative preface, says: "No one has ever told these stories so well as Richard Hakluyt"; and "for Britons his narratives are the fitting and best introduction to the study of geography." The illustrations (mostly ships and animals) and maps, by R. Morton Nance, are curious, interesting, and appropriate.

Macmillan's *The New Globe Readers, Primers I. and II.* (4d., 5d.), *Infant Readers, I. and II.* (6d., 8d.), and *Book I.* (10d.)—the first volumes of a fresh series—are all nicely and substantially got up. In the Primers and Infant Readers the uses of the vowels are very slowly followed; good coloured pictures are abundant; and special attention is drawn to letters and words by the device of coloured ink—the advantage of which has been found, in American experience (as we have seen), to be doubtful. Book I. is in common form, with illustrations uncoloured. The volumes are all very good of their class, and offer a fresh variety of material.

Messrs. George Bell & Sons publish *The York Readers*. First there are *The York Primers, Nos. 1 and 2* (3d., 4d.), with lessons closely adjusted to the vowel scheme, and well graduated, though somewhat rapid. Next an *Infant Reader* (6d.), which seems difficult enough, but the matter may lighten the difficulties. Then an *Introductory Reader* (8d.), and *Book I.* (9d.), both of which are well conceived and very satisfactory. All the volumes are effectively illustrated, the Primers wholly, the others partly, in colour. The series is a very promising one.

Messrs. Jack add three more volumes to their very interesting "Round the World" series of Geographical Readers: (1) *The British Isles* (1s. 4d.), (2) *Africa* (1s. 6d.), and (3) *Asia* (1s. 6d.). The selection of matter is very good, the text is fluently written, and maps and illustrations are abundant and generally serviceable. Occasionally the lack of special knowledge grates on one. For example: "Delhi was recovered by General Nicholson" (a popular blunder); the first Chinese War did not break out in 1841, nor did it arise because "English merchants were subjected to very bad treatment"; and it is very questionable indeed whether the Red Comyn was Bruce's "betrayed." The geographical detail makes the text of (1) read somewhat disconnectedly. But they are excellent readers.—The first of "Jack's Concentric Histories" is *Our Island's Story—Step I.: Simple Tales simply told* (1s.). The subjects are either important or attractive to the imagination, and they are suitably presented. There are numerous illustrations, some of them rather poor.

ANNOTATED ENGLISH CLASSICS.

Dent's "Temple Series of English Texts for Schools."—(1) *Ivanhoe* (Scott). Edited by George L. Turnbull, M.A. (2) *The Faery Queene, Book I.* Edited by Prof. W. H. Hudson. 2s. (3) *Samson Agonistes* (Milton), and (4) *The Princess* (Tennyson). Edited by A. J. Grieve, M.A. 1s. 4d. each. (5) *The Lay of the Last Minstrel* (Scott), edited by J. W. Young; and (6) *The Lady of the Lake* (Scott), edited by Flora Masson.

All these volumes are tastefully got up, and attractive in form; and (1), (5), and (6) have a number of good illustrations. The introductions and notes furnish every necessary assistance, and their literary character is generally of a superior kind. The volumes are welcome additions to a useful and agreeable series.

(1) *Helps to the Study of Milton's Areopagitica and English Sonnets.* By C. W. Crook, B.A., B.Sc. (Ralph, Holland, & Co.) (2) *Helps to the Study of Milton's Paradise Lost (Book VI.) and Milton's Lycidas.* By Alfred L. Cann, B.A. (2s. Ralph, Holland, & Co.) (3) *Milton's Paradise Lost, Book VI.* Edited by A. E. Roberts, M.A. (1s. Blackie. Junior School Milton.) (4) *Milton's Areopagitica.* Edited by H. B. Cotterill, M.A. (2s. Macmillan.) (5–8) Normal Press issues: (5) *Milton's Paradise Lost, Book VI.*, edited by A. E. Ikin, B.Sc. (Lond.), L.C.P. (1s. net); (6) *Milton's Sonnets*, edited by the Rev. E. A. Phillips, M.A. (6d. net); (7) *Milton's L'Allegro and Il Penseroso*, edited by J. H. Boardman, B.A. (Lond.), L.C.P. (1s. net); and (8) *Milton's Lycidas*, edited by the Rev. E. A. Phillips, M.A. (1s. net).

(1) and (2) are especially thoroughgoing editions; between introductions, footnotes, and appendixes, they explain everything that can possibly require explanation, and tabulate points that ought to be taken in connexion. We should have been content with less, but the work is really very well done. Both books are interleaved.—(3) is also sufficiently exhaustive, with a superior literary touch.—(4) Mr. Cotterill's introduction amply and agreeably places the reader in position to grasp Milton's position and purpose, and his notes serve to bring out the meaning of the text, while he "gives a wide berth to philological and grammatical disquisitions." A useful chronological summary for the period of Milton's life is appended. A practical and sensible edition.—(5–8) have the usual characters of the Normal Press publications. The introductions and notes are full, and likely to be helpful.

Macmillan's "English Classics."—(1) *Selections from Tennyson.* With Introduction and Notes by F. J. Rowe, M.A., and W. T. Webb, M.A., Professors of English Literature, Presidency College, Calcutta. (3s. 6d.) (2) *The Cup* (Tennyson). With Introduction and Notes by H. B. Cotterill, M.A. (2s. 6d.) (3–6) Scott's *Fortunes of Nigel, Ivanhoe, The Talisman, and Woodstock.* (2s. 6d. each.)

The notes of (1) are very full, but, at the same time, interesting; and we should hesitate to curtail them. They imply assiduous study, and, even where not exactly necessary, will repay reading. Mr. Cotterill imposes on himself (2) more restraint, but gives adequate explanations of classical terms and allusions, and of unusual modes of expression, and generally satisfies all reasonable expectations in scholarly form. The Scott volumes are very attractively printed, and contain the author's notes, as well as useful introductions and editorial notes; and 3, 5, 6 have also some pertinent notes by Mr. Andrew Lang. The series is an excellent one in all respects.

Two pretty volumes, handsomely printed and strongly bound, usher in the new series of "Longmans' Class-Books of English Literature": (1) *The Man born to be King*, and (2) *The Story of the Glittering Plain*, both by William Morris (1s. 4d. and 1s. 6d.). Such modern works afford a very welcome refreshment in school literature, in spite of artificial prose and facile and rough verse. The introductions are partly biographical, partly summary accounts of the text. Very brief notes are appended.

HISTORY.

The British Nation: a History. By George M. Wrong, M.A., Professor of History in the University of Toronto. (5s. ro. Appletons. Twentieth Century Text-Books.)

Prof. Wrong has a large outlook: he thinks that "Mr. Green's phrase, the English People, hardly covers the whole range of the history of the British nation." He presents the salient features in remarkable fullness, considering his space. This he accomplishes by judicious selection of the points emphasized. While keeping political development prominent, he gives about one-third of his chapters to social life in multifarious aspects. The biographical element is skilfully used. Here and there an old false note is struck, or the expression is insufficiently distinct, but, on the whole, the narrative is well up to date, and it is interestingly and effectively written. There are 291 illustrations, including numerous portraits; some, but a very small proportion, are scarcely satisfactory; generally, they are good and useful. There are also genealogical tables (seven), full-page maps (six), and maps and plans in the text (seventeen). Altogether, the work is extremely good, and it is furnished forth liberally and substantially.

The Early History and Growth of Calcutta. By Raja Binaya Krishna Deb. (Rs. 5; or 7s. 6d. Calcutta: R. C. Ghose, 106/1 Grey Street.)

The historical interest awakened in the collection of materials for the recent biography of Raja Binaya Krishna's famous ancestor, Maharaja Nubkisen (Navakrishna) the friend of Warren Hastings, has led to the present work. The Raja narrates vividly and in much detail the original conditions of the place, the early growth of the city, the social institutions, the civil and criminal judicature, trade and commerce, the Press, and so forth; and in various chapters he carries the story a considerable way down, sometimes to the present day. He has evidently laboured with a diligence that is not popularly associated with Rajas, and has forged yet another enduring link of honourable service between his family and the city. The volume is handsomely furnished forth.

Cities of India, by G. W. Forrest, C.I.E., ex-Director of Records to the Government of India (5s. net, Constable), is a reissue, substantially and chastely got up, with some sixty excellent illustrations. The description is most attractive, Mr. Forrest weaving into it a great deal of very interesting lore, historical, archæological, social, romantic, &c., gathered from wide reading and experience. We do not remember any book that will bring the principal Indian cities more vividly before the mind of the home-staying public. We wish Mr. Forrest had spared half-a-dozen lines from his glorification of Nicholson to simple mention of a no less heroic soldier, who had very much more to do with the taking of Delli; that he had omitted some ill-advised remarks about "a seditious press" and the mortal danger of "Liberal ideas"; and that he had struck out such banal irrelevances as that "there is a good deal to be seen in Madras." But, withal, it is a very able and agreeable book.

Messrs. Constable also reissue in a handy and attractive form *The Fight with France for North America*, by A. G. Bradley (3s. 6d. net), with ten illustrations (half of them portraits) and six very useful maps. There is much original work of excellent quality in this volume, and it is written in an easy and agreeable style. It should be placed in all school libraries. The general reader, too, should not overlook it.

MODERN LANGUAGES.

Dictionnaire Complet Illustré de la Langue Française. By Pierre Larousse. (2s. 6d. net. Dent.)

This is the first part (comprising the actual dictionary) of the celebrated work of Larousse, and it bears on the title-page "142e édition." It is all in French, of course, and that is just why Messrs. Dent publish it in this country—to meet the want felt by Reform teachers. Though we do not think the dangers of a bilingual dictionary so very "appalling," we have no doubt that this particular work may be used with great advantage, and we give it our warmest commendations. It is very clearly printed, and, though it extends to some eight hundred pages, it is handy enough for the pocket. There are a number of full-page illustrations, some of them in colour, and the text illustrations are multitudinous.

Material for Practical German Conversation. By Laurence Fossler, Professor of the Germanic Languages and Literatures, University of Nebraska. (3s. Ginn. International Modern Language Series.)

This "is not a book for beginners, nor even for second-year students"; yet second-year students should be about ready to tackle it. There are *Sprachübungen*, the matter being of wider scope and more varied than usual in such exercises, with notes on points of grammar and idiom, and exercises for translation from the German. The book offers a course that should familiarize the pupil with the language in a pleasant way and in no great time.

NEW EDITIONS AND REPRINTS.—GENERAL.

Messrs. Archibald Constable & Co. issue a second edition of *Dante's Ten Heavens, a Study of the Paradiso*, by Edmund G. Gardner, M.A. (5s. net). Some portions of the work have been largely revised. It is a masterly investigation and exposition, most helpful to the student of Dante, and fascinating to the general reader.

Mr. A. M. S. Methuen's trenchant discussion of projected changes of fiscal policy in sixteen letters addressed to Mr. Chamberlain—*England's Ruin* (3d. net, Methuen)—is in a second edition. The matter is ample and lucidly disposed, the reasoning vigorous, and the style eminently popular. It is really a book thrown into pamphlet form.

Three of Them, by Maxim Gorky, translated by A. Linden, is brought out in a "popular edition" by Mr. Fisher Unwin (1s. net). Marked by wide observation and deep sincerity, it is the strongest work of Gorky's that we have yet seen in English. At points Gorky would have done better to observe the injunction of Kirik Nikodimich in similar circumstances. "That's most likely," said Kirik (chapter xxxii.); "but take care; don't be too talkative upon the subject." The price is astonishing.

Messrs. Jarrold publish an eighth edition (28th thousand) of *The Comic Side of School Life*, by Henry J. Barker, B.A., F.R.S.L. If the examples of compositions exhibited in the book be typical, there must be an excellent basis for good English writing in the elementary schools. What can become of it? Mr. Barker also throws sidelights on aspects of school life that are anything but comic. A clever, though very simple, series of sketches.

FIRST GLANCES.

ENGLISH READERS.

Britannia History Readers. Book III.a: Men and Movements in British History. 1s. 6d. E. Arnold (School Series).

[Subjects important, well chosen, and attractively presented.]

Citizen Reader. By the Right Hon. H. O. Arnold-Forster. 1s. 6d. Cassell.

[Revised, reset, and reillustrated. D deservedly popular.]

McDougall's Alexandra Readers: Second Infant Reader. 8d.

[Simple stories and poems. Bright illustrations.]

Sonnenschein's Second English Reader. 1s. 3d. Routledge.

[Sequel to Part II. of "Reading in a Twelvemonth." Engaging matter; bold open type; fourteen illustrations by J. Ayton Symington.]

Union Jack Readers. Book V. 1s. 4d. Cassell.

[Varied and good prose and verse. Many coloured illustrations.]

ENGLISH CLASSICS FOR SCHOOLS.

Blackie's English Classics. Emerson: Select Poems. 2d.

[Biographical sketch and pointed remarks on Emerson's interpretation of Nature. Brief and suggestive notes.]

Carmelite Classics. (1) The Ancient Mariner (Coleridge), 4d.; (2) The Traveller and Retaliation, (3) The Deserted Village (Goldsmith), 4d. each; (4) Gray's Elegy, 4d.; (5) Lays of Ancient Rome (Macaulay), 6d.; (6) L'Allegro and Il Penseroso, and (7) Samson Agonistes (Milton), 4d. and 6d. Horace Marshall.

[Brief glossary or else notes; questions on text; select bibliography. Good type and dainty get-up.]

Macmillan's English Classics. (1) Paradise Lost (Milton), Book VI.; (2) The Ancient Mariner (Coleridge); (3) Selected Poems of Gray, Burns, Cowper, Moore, Longfellow. 1s. each.

[Full and useful introductions; notes extensive and careful.]

Normal Tutorial Series. (1) Milton's Sonnets, parsed and analysed. (2) Milton's Paradise Lost, Book I., parsed and analysed. 1s. net each.

Temple English Literature Series for Schools. (1) Morte D'Arthur and Mabinogion (stories based on), by Beatrice Clay; (2) The Adventures of Odysseus, retold in English by F. S. Marvin, R. J. G. Mayor, and F. M. Stawell; (3) Southey's Life of Nelson; (4) Longfellow's Hiawatha, edited by Henry Williams, M.A.; (5) Macaulay's Lays of Ancient Rome, edited by Oliphant Smeaton, M.A.; (6) Selections from Shakespeare, edited by Arthur Burrell, M.A. Oxon.; and (7) Tales and Stories from Spenser's Faery Queene, by N. G. Royde-Smith. 1s. net each. (8) The Ancient Mariner (Coleridge); (9) Gray's Elegy; (10) The Traveller and The Deserted Village (Goldsmith). 3d. net each.

[(1)-(7) Very tastefully got up; frontispiece; a dozen illustrations in (1), and (from Greek vases) in (2). (8)-(10) Slight introductions and notes; strongly got up, and handy.]

MODERN LANGUAGES.

Blackie's Little French Classics.—(1) Episodes from La Révolution en Angleterre (Guizot). Edited by W. G. Hartog, B.A. (2) Jacques l'Aveugle (Legouvé) and L'Enlèvement de la Redoute (Mérimée), together. Edited by W. O. Brigstocke. (3) Oriental Scenes (Gérard de Nerval). Edited by H. H. Horton, B.A. (4) La dernière Classe, L'Enfant Espion, and La Mort du Dauphin (A. Daudet). Edited by H. W. Preston, M.A. (5) Récits du Guerre (Bourget). Edited by W. O. Brigstocke. 4d. each.

Supplementary Series.—(1) Le Barbier de Séville (Beaumarchais). Edited by W. G. Hartog, B.A. 8d. (2) Les Femmes Savantes (Molière). Edited by G. H. Clarke, M.A., Officier d'Académie. 10d.

[Excellent matter; competently edited.]

Blackie's Little German Classics.—(1) The Road to Italy [Karlsbad to Verona] (Goethe). Edited by R. H. Allpress, M.A. (2) Die Geschwister (Goethe). Edited by Ludwig Hirsch, Ph.D. (Bonn). (3) Die Silberdistel (Ernst Muellenbach). Edited by A. Meyer. 6d. each.

[Good selections; well annotated.]

Deutsche Sagen. Edited by Marguerite Ninet. 1s. 6d. Horace Marshall.

[Delightful selection; "to supply a want in third-year literature"; vocabulary; illustrations.]

Oxford Modern French Series.—(Eight volumes already issued.) (9) Une Haine à Bord (de la Landelle). Edited by R. E. A. Chessex, B.A. 3s. (10) Les Normands en Angleterre et en France (Thierry). Edited by A. H. Smith, M.A., L.-ès-L. (Paris). 2s. 6d. (11) Le Serment (Jules David). Edited by Cécile Hugon. 1s. 6d. (12) Voyage en Espagne (Gautier). Edited by Gerald Goodridge, B.A. 2s. 6d. Clarendon Press.

[Excellent matter and in style. Notes discreet and good. But is Mr. Chessex right in saying (page 232) that "Les Paroles d'un Croyant" "is written in verses"? Apparently "it is well nigh forgotten."]

OXFORD UNIVERSITY PRESS.

XENOPHON'S ANABASIS. Books

I-IV. Reissue in uniform cloth binding at 1s. 6d. each. Each with Introduction, Notes, and a full Vocabulary to the whole of the *Anabasis*. Books I, III, and IV edited by J. MARSHALL; Book II by C. S. JERRAM. Vocabulary by J. MARSHALL.

Educational Times.—"Introductions and notes adequate and careful. Excellent."

HORACE. With a Commentary by EDWARD C. WICKHAM, D.D.

Vol. I.—The Odes, Carmen Saeculare, and Epodes. New Edition. 6s.

Educational Times.—"Some months back we noticed the second volume of Dean Wickham's most careful and scholarly work. While following the lines of the school edition of 1891, the present edition brings the notes into substantial harmony with the later octavo edition. The general introduction deals adequately with the text (MSS., scholiasts, and editions), and summarizes what is known of Horace from his own works or from other sources. The notes are very full and helpful, and suggestive even if not in all cases convincing. An appendix deals with metres and other special matters. Altogether an excellent edition, beautifully got up and convenient in form."

Vol. II.—The Satires, Epistles, and De Arte Poetica. 6s.

Educational Times.—"Scholarly, elaborate, and helpful; and the print and get-up are very tasteful and attractive."

LIVY. Book VI. With Introduction and Notes by A. R. CLUER, B.A. Revised by P. E. MATHESON, M.A. Separate issue, extra fcap. 8vo, cloth, 2s.

Educational Times.—"The notes are discriminating and careful."

School World.—"We would specially praise the 'Excursus on Livy's Language and Style,' a most useful addition. The notes are satisfactory."

EXERCISES IN LATIN PROSE. By

G. G. RAMSAY, LL.D., Litt.D. Extra fcap. 8vo, cloth.

Part I.—Lower Grade. Price 1s. 6d.

Part II.—Higher Grade. Price 1s. 6d.

Part III.—Syntax and Appendix. Price 2s. 6d.

Education.—"The exercises are in themselves interesting, and recapitulatory exercises at suitable stages add largely to the value of the books. Valuable, too, are certain well-selected passages for translation into continuous prose. . . . The vocabulary given in each of the first two parts is full and serviceable. In point of cost, as well as utility, no better manuals could be desired."

Educational Times.—"Admirable manuals, constructed with notable care and judgment."

GRADUATED LESSONS ON THE

OLD TESTAMENT. By the Rev. U. Z. RULE. Edited by the Rev. LL. J. M. BEBB.

In Three Volumes, extra fcap. 8vo, with Maps in each volume. The three volumes can be bought separately, price 1s. 6d. each volume in paper boards and cloth back; 1s. 9d. each volume in cloth. Specimen Copies may be had by Schoolmasters and School Teachers on special terms, on application to Mr. Frowde, Amen Corner, E.C.

From the Rev. H. B. GRAY, D.D., Warden of Bradfield College, Berks:—"In my judgment Mr. Rule's Graduated Lessons will be very valuable in the hands of teachers and their pupils, and equally useful in the hands of independent students. The historical statements are concise and clear. The explanatory footnotes are uniformly good, brief, and accurate."

From Miss L. H. SOULSBY:—"The book seems quite unusually well adapted to give a broad outline of the Bible, showing its chief parts in true proportion and right relations."

BURNS.—SELECTED POEMS. By

J. LOGIE ROBERTSON, M.A. New Impression. Extra fcap. 8vo, cloth, 3s. 6d.

Oxford Modern French Series.

Edited by LEON DELBOS, M.A.

Crown 8vo, cloth.

Four New Volumes.

UNE HAINE A BORD. By DE LA

LANDELLE. Edited by R. E. A. CHESSEX. 256 pages, 3s.

LES NORMANDS EN ANGLE-TERRE ET EN FRANCE. By THIERRY. Edited by

A. H. SMITH. 160 pages, 2s. 6d.

Dundee Advertiser.—"Schoolboys will be interested in spite of themselves."

LE SERMENT. By JULES DAVID. Edited

by CÉCILE HUGON. 96 pages, 1s. 6d.

Tablet.—"An exciting story which should help to attract by its inherent interest."

VOYAGE EN ESPAGNE. By GAUTIER.

Edited by GERALD GOODRIDGE. With a Map. 213 pages, 2s. 6d.

Sheffield Independent.—"This masterpiece, one of the most delightful books of travel in any language, is eminently suited for such a series as this alike by reason of the charm of its style, its picturesqueness, and its incessant fascinating interest. The volumes published in the 'Oxford Modern French Series' are calculated to induce pupils to study French literature for its own sake, not as a task, but as a pleasure; and of none of these volumes is this statement more true than of Gautier's immortal narrative of his Spanish journey."

Other Volumes in this Series already published are—LAMARTINE'S "Deux Héroïnes de la Révolution Française," 2s. 6d.; BALZAC'S "La Vendetta" and "Pierre Grassou," 2s.; VICTOR HUGO'S "Bug-Jargal," 2s.; SANDEAU'S "Mademoiselle de la Sciglière," 2s. 6d.; CHATEAUBRIAND'S "Mémoires d'Outre-Tombe," 2s. 6d.; KARR'S "Voyage autour de mon Jardin," 2s.; GOZLAN'S "Le Château de Vaux," 1s. 6d.; "Extraits de Voyages d'Alexis de Tocqueville," 2s.

ARISTOTLE'S POLITICS. Translated

by BENJAMIN JOWETT. With Introduction, Analysis, and Index by H. W. C. DAVIS, M.A. Extra fcap. 8vo, cloth, 3s. 6d. net.

CHART OF THE RULES OF

HARMONY. By A. SOMERVELL. Crown 4to, on a card. 1s. net.

CHART OF THE RULES OF

COUNTERPOINT. By the same Author. Crown 4to, on a card. 1s. net.

LECTURES ON THE LOGIC OF

ARITHMETIC. By M. E. BOOLE. Crown 8vo, cloth, 2s.; or interleaved with writing paper, 3s.

THE PREPARATION OF THE

CHILD FOR SCIENCE. By M. E. BOOLE. Crown 8vo, cloth, 2s.

MATHEMATICS.

10872. (Professor HUDSON, M.A.)—A paraboloid of revolution floats with the lowest point of its base in the surface of a fluid, and its axis inclined at an angle θ to the horizon. Find its height and specific gravity.

Note by the EDITOR.

This problem is identical with Question 6361, which was solved by the Proposer in the *Reprint*, Vol. LXXIII., p. 73. We insert as interesting the alternative solution just furnished by him.

Solution by the PROPOSER.

Consider a section of the paraboloid by a plane through the axis and the lowest point of the base. Let A be the vertex, G the centre of gravity, H the centre of gravity of the fluid displaced, Q the lowest point of the base.

Let TARN be the axis, PT the horizontal tangent. Draw QVR parallel to PT, PV parallel to AN, HK perpendicular to AN.

Now $NR = 2 \cot \theta \sqrt{ah}$,

$AT = a \cot^2 \theta$;

therefore

$PV = TR = h + a \cot^2 \theta - 2 \cot \theta \sqrt{ah} = (\sqrt{h} - \cot \theta \sqrt{a})^2$;

also $AG = \frac{2}{3}AN$, $PH = \frac{2}{3}PV$, GH is vertical; therefore

$KG = KH \tan \theta$;

therefore $\frac{2}{3}h - a \cot^2 \theta - \frac{2}{3}[h + a \cot^2 \theta - 2 \cot \theta \sqrt{ah}] = 2a \cot \theta - \tan \theta$;

whence

$h = a \left[\frac{1}{4} (5 \cot \theta + 6 \tan \theta) \right]^2$.

Specific gravity = $\frac{2aPV^2}{2ah^2} = \frac{(1 - \cot \theta \sqrt{a/h})^4}{[(1 + 5 \sin^2 \theta)/(5 + \sin^2 \theta)]^4}$.

15711. (I. ARNOLD.)—The sides of a plane triangle are in arithmetical progression. It is required to construct it when the common difference and vertical angle are given.

Solution by the late R. TUCKER, M.A., and C. M. ROSS.

(1) When the vertical angle is opposite the mean side c and δ and A are given, $\cos A = \frac{(c-\delta)^2 + (c+\delta)^2 - c^2}{2(c^2 - \delta^2)}$;

therefore $c^2 = 2(1 + \cos A) \delta^2 / (2 \cos A - 1)$;

therefore, &c.

(2) When the vertical angle is opposite the shortest side. With the same notation,

$\cos A = \frac{(c+\delta)^2 + c^2 - (c-\delta)^2}{2c(c+\delta)} = \frac{c+4\delta}{2(c+\delta)}$;

therefore $c = 2\delta(2 - \cos A) / (2 \cos A - 1)$.

(3) The case where the vertical angle is opposite the greatest side may be similarly considered.

The PROPOSER gives the following interesting geometrical solution of case (3):—

Let the longest side be the base of the triangle. In the indefinite line AB take AD = the common difference. Make the angle ADF equal to the given vertical angle, and take DF = 2AD. Join AF and make $\angle EAF = \angle AFE$. Bisect the angle BDF by DC, meeting AE produced in C. Through C draw CB parallel to DF; then is ABC the required triangle. Produce AF and BC to meet in G. Then the triangles ADF, ABG are similar, and $DF = 2AD$; therefore $BG = 2AB$. Because $\angle FAE = \angle AFE = \angle AGC$, then $AC = CG$, and $AC + CB = BG = 2AB$, or AB is an arithmetic mean between AC and CB. Again, since $\angle BDC = \angle CDE = \angle DCB$, therefore $BD = BC$ and AD is the common difference. Also $\angle ABC = \angle ADF$, the given angle. Therefore, &c.

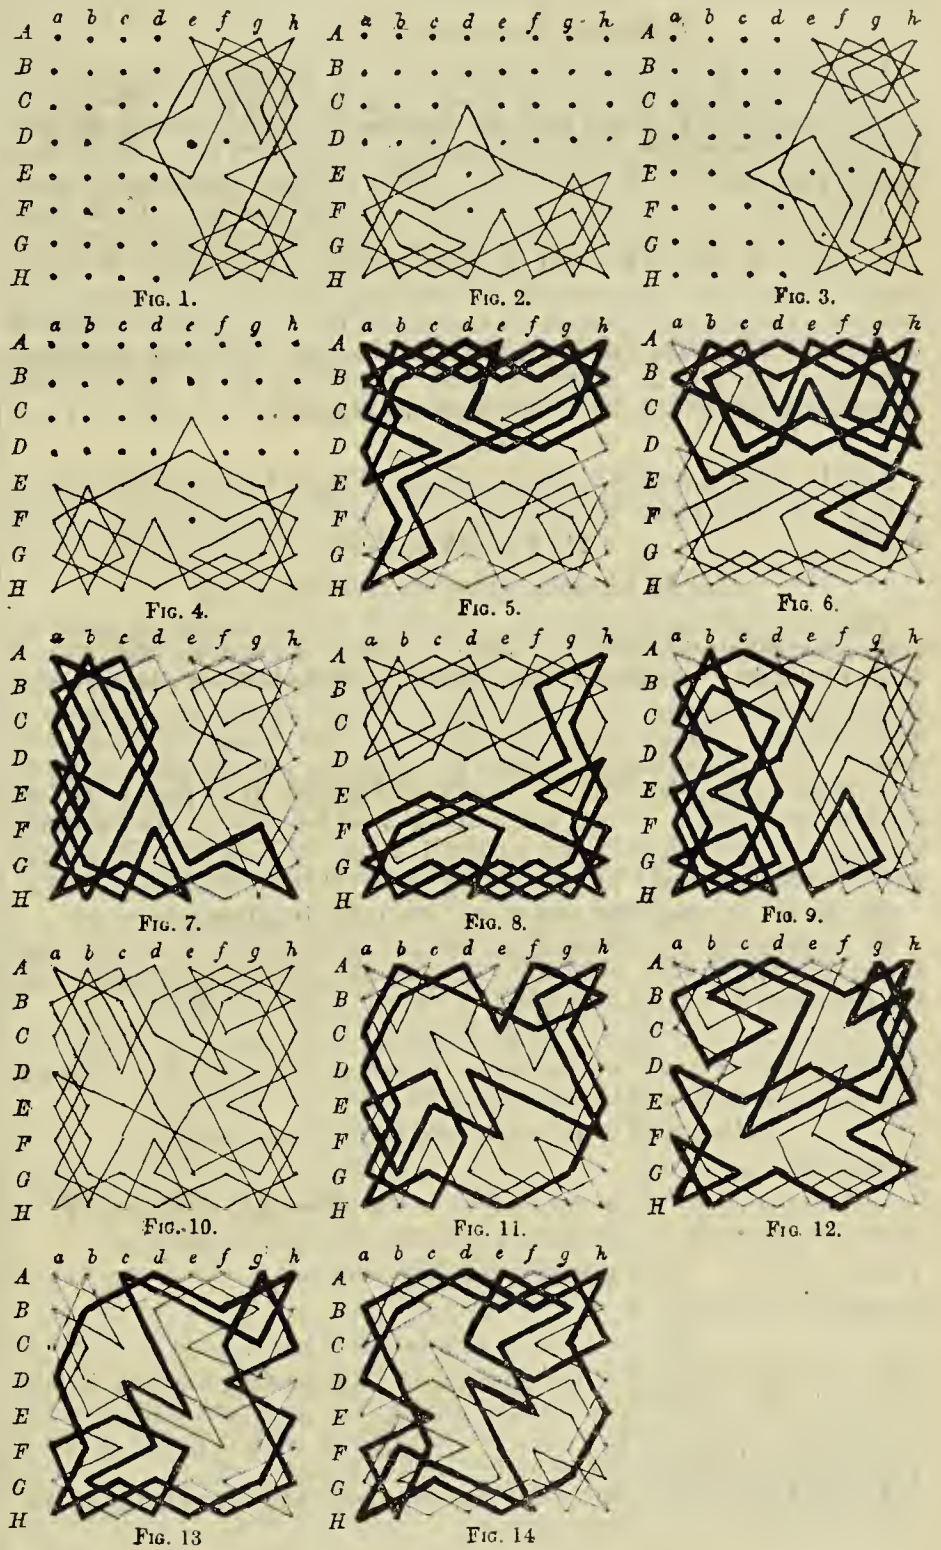

8108. (B. HANUMANTA RAU, M.A.)—Two knights being placed on two squares of a chess-board, required to move each 31 times so that no square may be used more than once.

Solution by T. DENNIS.

Let P and Q be the two knights. The method of solution will be as follows:—When P and Q are given in any arbitrary positions, we shall endeavour to find two closed paths made up of knights' moves, one path passing through P and not Q and the other passing through Q and not P.

If each of these paths consists of 32 squares and no square is common to the two paths, then we have found a solution for the position considered. Also, since we shall only consider closed paths, this solution also applies if P and Q are initially anywhere on their respective paths. If initially P and Q are a knight's move off one another, then a single path com-

pleting the whole board will solve. We use this in Fig. 10. Figs. 1, 5, 10, and 11 are fundamental; the others are derived from these by reflexion in a diagonal or by twisting the board round. Since Fig. 1 is symmetrical about a line bisecting the board and parallel to the edge ABC...H, we need not draw in the other path in this case.

Now place P on the board; then turn the board round so that P is on the lower right quarter of the board (for brevity we shall call this quarter X).

(a) Consider Figs. 1 and 2: the only squares that are on the P path (shown by a fine line) in both figures are those in X and the square Dd; and Dd is not on the P path in Fig. 3. Hence one of these three figures solves the problem, unless P and Q are both on X.

(b) Let Q be on Ee. Fig. 3 solves unless P is on Ef. So we want a figure in which Ee and Ef are on different paths; Fig. 4 is such, and hence it solves this case.

(c) Similarly, if Q be on Ef, Fig. 3 solves unless P is on Ee, in which case Fig. 4 solves.

(d) Now let Q be on Eg: Fig. 8 solves.

(e) Now let Q be on Eh: Fig. 6 solves unless P is on Eg, Fe, or Gg: these cases are solved by Figs. 8, 4, and 9 respectively.

(f) Next let Q be on Ff: Fig. 12 solves unless P is on Ee, Eg, Eh, Gh, Hf. We have just considered the first three of these cases (with P and Q interchanged); the other two are solved by Fig. 13.

[Rest in *Reprint*.]

15715. (Professor E. B. ESCORR.)—In Fermat's (Pell's) equation $x^2 - Ny^2 = 1$, where N is a prime of the form $4n + 3$, prove that the middle partial quotient of \sqrt{N} expressed as a continued fraction is always odd and equal to a or $a - 1$ according as a is odd or even (a being the integral part of \sqrt{N}). In the last case the quotient immediately preceding the middle quotient is unity.

Solution by ALEXANDER HOLM, M.A.

If the number of terms in the cycle of partial quotients were odd, then the number N would be the sum of two integral squares; vide:—*The Expression of a Quadratic Surd as a Continued Fraction*, by Thomas Muir, Glasgow (Maclehose), 1874, § 51. But a number of the form $4n + 3$ cannot be the sum of two squares. Therefore the number of terms in the cycle must be even. Now "when the number N is a prime and there is an even number of terms in the cycle of partial quotients then the middle term is a or $a - 1$ according as a is odd or even" (Muir, *op. cit.*, § 47). The properties of continued fractions of this kind are very fully investigated in a paper "On the Phenomenon of Greatest Middle in the Cycle of a Class of Periodic Continued Fractions," by Thomas Muir, *Proc. Roy. Soc. Edin.*, 1883-84. In § 18 it is proved that when a is even the quotient immediately preceding the middle quotient is unity.

15717. (R. CHARTRES.)—Find integral values of x , and n ($n > 3$), so that $x^n - 1$ shall equal the product of two consecutive integers. When $n = 3$, $7^3 - 1 = 342 = 18 \cdot 19$.

Note by Lt.-Col. ALLAN CUNNINGHAM, R.E.

This seems a difficult problem. If $a(a + 1)$ be the product in question, then $x^n = a^2 + a + 1 = (a^3 - 1)/(a - 1)$; therefore x must be odd, and of form $(A^2 + 3B^2)$. Hence x must be either a prime of form $(6\omega + 1)$, or a power of such a prime; or else a product of such primes, or of powers of such primes. Again, $\frac{1}{2}(x^n - 1) = \frac{1}{2}a(a + 1)$, the triangular number of base a . On comparing the values of $\frac{1}{2}(x^n - 1)$, for the possible forms of x , with Joncourt's *Table of Triangular Numbers*, it is found that no solution exists when $x^n < 2 \cdot 10^3$, and $n > 3$ (as required). Note that the solution of $(a^3 - 1)/(a - 1) \equiv 0 \pmod{x^n}$ is in itself a difficult enough problem (when $n > 3$); but the present problem is much more difficult.

Mr. R. W. D. CHRISTIE contributes the following discussion:—

In attempting to solve Question 15717 I came to the conclusion that integral solutions were impossible from the general solution except for the one value $a = 2$, *e.g.*, let $x^n - 1 = a(a + 1) = a^2 + a$. Thus

$$x^n = a^2 + a + 1.$$

It follows that x is of the same form: therefore $(A^2 + A + 1)^n = a^2 + a + 1$. For $n = 1$ the solution is obvious, $a = A$. For $n = 2$ we have

$$(A^2 + A + 1)^2 = (a^2 - 1)^2 + (a^2 - 1)(2a + 1) + (2a + 1)^2.$$

For $n = 3$

$$(A^2 + A + 1)^3 = (a^3 - 3a - 1)^2 + (a^3 - 3a - 1)(3a - a + 1) + [3a(a + 1)]^2$$

where $a^3 - 3a - 1 = 1$ necessarily; thus $a = 2$, a unique solution.

For $n = 4$

$$(A^2 + A + 1)^4 = a^4 - 6a^2 - 4a = 1,$$

impossible. For $n = 5$

$$(a^2 + a + 1)^5 = a^5 - 10a^3 - 10a^2 + 1 + \dots$$

Here $a^5 - 10a^3 - 10a^2 + 1 = 1$, impossible. The general solution is now obvious. We must take on the dexter the alternate coefficients of $(a + b)^n$, giving form $(A^2 + AB + B^2)$, and then equate either A or B to unity in order to secure $A^2 + A + 1$ or $B^2 + B + 1$.

I should like to know whether other integral values than 2 can be got, and so am interested in the Question.

15707. (Professor NEUBERG.)—On joint le sommet A d'une ellipse à un point quelconque M de cette courbe; la perpendiculaire en M sur AM rencontre l'ellipse en un second point N; enfin on achève le rectangle AMNP. Trouver le lieu du point P.

Solution by the late R. TUCKER, M.A., and R. F. DAVIS, M.A.

$$\angle NAM = \phi, \quad \angle PAA' = \theta.$$

$$AN = l, \quad r = AP = l \sin \phi;$$

co-ordinates of M are

$$l \cos \phi \sin \theta, \quad -l \cos \phi \cos \theta;$$

co-ordinates of N are

$$l \sin(\phi + \theta), \quad -l \cos(\phi + \theta).$$

The equation to the ellipse is

$$a^2 y^2 = b^2 (2ax - x^2).$$

Therefore, since N is on the

$$\text{curve,} \quad l^2 [a^2 \cos^2(\phi + \theta) + b^2 \sin^2(\phi + \theta)] = 2ab^2 \sin(\phi + \theta),$$

i.e., in co-ordinates $x = r \cos \theta, y = r \sin \theta$ of the point P,

$$l^2 [(a^2 x^2 + b^2 y^2) \cos^2 \phi + (a^2 y^2 + b^2 x^2) \sin^2 \phi - 2(a^2 - b^2)xy \sin \phi \cos \phi]$$

i.e., using the relation $r/l = \sin \phi$,

$$(a^2 x^2 + b^2 y^2) \cos^2 \phi - 2y [(a^2 - b^2)x + ab^2] \sin \phi \cos \phi + (a^2 y^2 + b^2 x^2 - 2ab^2 x) \sin^2 \phi = 0 \dots (i).$$

Since M is on the the curve, therefore

$$a^2 l \cos \phi \cos^2 \theta = b^2 \sin \theta (2a - l \cos \phi \sin \theta),$$

$$\text{i.e.,} \quad l \cos \phi [a^2 \cos^2 \theta + b^2 \sin^2 \theta] = 2a l^2 \sin \theta,$$

$$\text{i.e.,} \quad (a^2 x^2 + b^2 y^2) \cos \phi = 2ab^2 y \sin \phi \dots (ii).$$

From (i.) and (ii.), by eliminating ϕ , we get

$$4a^2 b^4 y^2 - 4ab^2 y^2 [(a^2 - b^2)x + ab^2] + (a^2 y^2 + b^2 x^2 - 2ab^2 x) (a^2 x^2 + b^2 y^2) = 0,$$

$$\text{i.e.,} \quad -4ab^2 [(a^2 - b^2) y^2 x] + (a^4 + b^4) x^2 y^2 + a^2 b^2 (x^4 + y^4)$$

$$- 2ab^2 x (a^2 x^2 + b^2 y^2) = 0,$$

$$\text{i.e.,} \quad (a^4 + b^4) x^2 y^2 + a^2 b^2 (x^4 + y^4) - 2ab^2 x [2y^2 (a^2 - b^2) + a^2 x^2 + b^2 y^2] = 0,$$

$$\text{i.e.,} \quad (a^4 + b^4) x^2 y^2 + a^2 b^2 (x^4 + y^4) - 2ab^2 x [a^2 x^2 + (2a^2 - b^2) y^2] = 0,$$

$$\text{i.e.,} \quad a^2 b^2 (x^2 + y^2)^2 + (a^2 - b^2)^2 x^2 y^2 = 2ab^2 x [a^2 (x^2 + y^2) + (a^2 - b^2) y^2],$$

i.e., in polar co-ordinates

$$r = 2ab^2 \cos \theta \frac{[a^2 + (a^2 - b^2) \sin^2 \theta]}{a^2 b^2 + (a^2 - b^2) \sin^2 \theta \cos^2 \theta}.$$

[Mr. DAVIS remarks that this is an oval curve lying outside the ellipse and touching it at the extremities of the major axis; also that when $a = b$ it reduces to $x^2 + y^2 = 2ax$ as might, *a priori*, be expected.]

Note by CONSTANCE I. MARKS, B.A.

In connexion with this problem, the following geometrical discussion will perhaps be found interesting, as showing how to determine any number of points on the same locus by means of pairs of perpendicular chords through the vertex A, the rectangles not being completed as in the question.

Let AMNP be the rectangle in the question in any one of its positions, so that P is a point on the locus. Join NA, NR and let MA and NR produced meet in L. Join MR, LP and draw LSTU through T, the intersection of NA and MR. From the harmonic property of the complete quadrilateral formed by the straight lines LM, LN, AN, MR, we have its diagonals AR, MN bisected at S and U; for AR and MN are parallel by hypothesis; therefore the directions AR and LU are conjugate in the ellipse, and LU produced is a diameter. Again, because LA and PN are parallel, therefore the triangles LNA and LPA are equal, whence the triangles ANR, LPR are equal, and have their angles at R equal; therefore $AR : RP = LR : RN = LA : AM$ (because AR is parallel to MN).

We have now the following general method for finding positions of P:—Let any perpendicular chords through A (AM, AR, say) be produced through A and R respectively, the former to meet the diameter conjugate to AR in L; then, if on AR produced RP be taken a fourth proportional to LA, AM, and AR, the point P is on the required locus.

10376. (Professor SYLVESTER.)—If ϕ, ψ, ω are three algebraic functions of x, y, y', y'' such that ϕ', ψ', ω' contain a common factor $\theta(x, y, y', y'', y''')$, show that the complete primitive of $F(\phi, \psi, \omega) = 0$, where F is any function form, may be found algebraically.

[Professor Sylvester remarks that this question is an extension of a well known principle of Lagrange, and that it may itself be indefinitely extended in more than one direction.]

Solution by J. A. H. JOHNSTON, M.A.

From the mode of formation of $\theta(x, y, y', y'', y''')$, it follows that $\phi = a, \psi = b$, and $\omega = c$ are three first integrals of $\theta = 0$, where a, b , and c are arbitrary constants.

The stated conditions imply that ϕ, ψ , and ω are independent functions, and, since they involve x, y, y' , and y'' algebraically, we may eliminate y' and y'' between $\phi = a, \psi = b$, and $\omega = c$.

The result is the complete primitive of $\theta = 0$ or $\chi(x, y, a, b, c) = 0$.

Now, if we differentiate any conceivable functional form $F(\phi, \psi, \omega) = 0$, $(\partial F/\partial \phi) \phi' + (\partial F/\partial \psi) \psi' + (\partial F/\partial \omega) \omega' = 0$ leads again to $\theta = 0$, since it is common to ϕ', ψ' , and ω' , and so $F(\phi, \psi, \omega) = 0$ is a first integral of $\theta = 0$, but of course non-independently of ϕ, ψ , and ω , which are its three independent first integrals. In fact $F(a, b, c) = 0$. It follows that the complete primitive of $F(\phi, \psi, \omega) = 0$ is $\chi(x, y, a, b, c) = 0$, subject to the condition $F(a, b, c) = 0$, and this reduces the arbitrary constants to two—the proper number.

The solution has thus been found algebraically.

Note.—The multipliers of θ in ϕ', ψ' , and ω' may be regarded as integra-

ting factors, and the whole process may be illustrated by the simple case

$$\phi = xy + x^2y' + \frac{1}{3}x^3y'' = a, \quad \psi = x^2y + \frac{5}{3}x^3y' + \frac{1}{3}x^4y'' = b,$$

$$\omega = x^3y + 2x^4y' + \frac{1}{2}x^5y'' = c,$$

all leading to a common factor for ϕ' , ψ' , and ω' , viz.,

$$\theta = y + 3xy' + \frac{5}{3}x^2y'' + \frac{1}{6}x^3y''' = 0.$$

The eliminant of ϕ , ψ , and ω leads to $y = (3ax - 3bx + c)/x^3$ as the complete primitive, and this is easily identified as the complete primitive of $\theta = 0$.

It is to be noted that cases of particular integrals arise from the combined use of $F(\phi, \psi, \omega) = 0$ and the part of its differentiated result that is independent of $\theta = 0$.

The theorem may now be generalized as follows:—Let $\phi_1, \phi_2, \dots, \phi_n$ be n algebraical functions of $x, y, y', y'', \dots, y^{(n-1)}$, such that $\phi'_1, \phi'_2, \dots, \phi'_n$ contains a common factor $\theta(x, y, y', y'', \dots, y^{(n)})$. Then the complete primitive of $F(\phi_1, \phi_2, \dots, \phi_n) = 0$, where F is any function form, is $\chi(x, y, a_1, a_2, \dots, a_n) = 0$, subject to the condition

$$F(a_1, a_2, \dots, a_n) = 0,$$

where χ is the eliminant of $\phi_1 = a_1, \phi_2 = a_2, \dots, \phi_n = a_n$.

15712. (Professor SANJANA, M.A.)—In the triangle ABC, AD is the median to the side BC and GQ is the perpendicular to BC from G, the median point; also AD₁ is the symmedian, and KQ₁ the perpendicular from K, the symmedian point; segments ER, E₁R₁ and FS, F₁S₁ are similarly taken on CA and AB. Prove that

$$(D_1Q_1/DQ)(b^2 + c^2) + (E_1R_1/ER)(c^2 + a^2) + (F_1S_1/FS)(a^2 + b^2) = 12S \tan \omega.$$

Solution by the late R. TUCKER, M.A., and others.

If L is the foot of the perpendicular from A on BC, then DQ/DL = $\frac{1}{3}$; therefore $DQ = \frac{1}{3}(\frac{1}{2}a - b \cos C) = \frac{1}{6}(c \cos B - b \cos C) \dots \dots \dots$ (i.),

$$D_1Q_1/D_1L = \frac{1}{2}a \tan \omega / b \sin C \text{ and } D_1L = [bc/(b^2 + c^2)](b \cos B - c \cos C);$$

$$\text{therefore } D_1Q_1 = \frac{1}{2}a \tan \omega \frac{bc(b \cos B - c \cos C)}{(b^2 + c^2)b \sin C};$$

therefore

$$\frac{D_1Q_1}{DQ} (b^2 + c^2) = \frac{abc \tan \omega (b \cos B - c \cos C)}{2b \sin C (c \cos B - b \cos C)} \cdot 6 = \frac{3abc \tan \omega R (\sin 2B - \sin 2C)}{bc \sin (C - B)}$$

$$= \frac{3a \tan \omega 2R \cos A \sin (C - B)}{\sin (C - B)} = 6aR \tan \omega \cos A;$$

$$\text{therefore } \Sigma (D_1Q_1/DQ)(b^2 + c^2) = 6R^2 \tan \omega \Sigma \sin 2A = 12S \tan \omega.$$

15699. (JAMES BLAIKIE, M.A.)—Prove that $m^{2n+1} + (m-1)^{n+2}$ is a multiple of $m^2 - m + 1$ [e.g., $1000^{15} + 999^9 = M(999001)$].

Solutions (I.) by Lt.-Col. ALLAN CUNNINGHAM, R.E., and the late R. TUCKER, M.A.; (II.) by the PROPOSER; (III.) by R. F. DAVIS, M.A.; (IV.) by Professor SANJANA, M.A.

(I.) Let $N = m^{2n+1} + (m-1)^{n+2}$, and $q = m^2 - m + 1$. Then $N = m(m^2)^n + (m-1)^2(m-1)^n = m(q + m - 1)^n + (m-1)^2(m-1)^n$
 $\equiv m(m-1)^n + (m-1)^2(m-1)^n \pmod{q}, \equiv (m-1)^n [m + (m-1)^2] \pmod{q}$
 $\equiv (m-1)^n \cdot q \equiv 0 \pmod{q}.$

(II.) $m^{2n+1} + (m-1)^{n+2} = m^{2n-1}(m^2 - m + 1) + (m-1)[m^{2n-1} + (m-1)^{n+1}]$.
 If, then, $m^{2n-1} + (m-1)^{n+1}$ be a multiple of $m^2 - m + 1$, then

$$m^{2n+1} + (m-1)^{n+2}$$

is also a multiple, that is, if the proposition be true for one value of n , it is true for all higher values. But it is true when $n = 0$; therefore it is always true.

(III.) Let $u_n = m^{2n+1} + (m-1)^{n+2}$. Then by multiplication it is easily found that $(m^2 + m - 1)u_n = u_{n+1} + m^2(m-1)u_{n-1}$. Hence any factor that is contained in both u_{n-1} and u_n will also be contained in u_{n+1} . But

$$u_0 = m + (m-1)^2 = m^2 - m + 1;$$

$$\text{and } u_1 = m^3 + (m-1)^3 = (2m-1)(m^2 - m + 1).$$

Therefore u_2 be a multiple of $m^2 - m + 1$; and, since u_1, u_2 are both multiples of $m^2 - m + 1$, so also is u_3 ; and so on.

(IV.) When $m^2 - m + 1 = 0$, or m be an imaginary cube root of -1 , we can readily show the expression to be zero; hence its divisibility. By the following method, however, we can get an expression for the quotient. Let $m^2 - m + 1 = k$, so that $m - 1 = m^2 - k$; then the given expression

$$= m^{2n+1} + (m^2 - k)^{n+2} = m^{2n+1} + m^{2n+4} - C_1 m^{2n+2} k + C_2 m^{2n} k^2 - \dots$$

$$+ (-1)^{n+2} k^{n+2}$$

$$= m^{2n+1}(m+1)k - C_1 m^{2n+2} k + C_2 m^{2n} k^2 - \dots$$

$$= k [m^{2n+2} + m^{2n+1} - C_1 m^{2n+2} + C_2 m^{2n} k - \dots],$$

where C_1, C_2, \dots are the numbers of 1, 2, ... combinations of $n + 2$ things.

QUESTIONS FOR SOLUTION.

15750. (Professor STEGGALL.)—A uniform string of length l is placed, in a straight line perpendicular to the quadrantal curved edge of radius c , on a smooth table with a piece hanging over to the lowest point of the quadrant. Prove that the string will begin to leave the edge when a length $\frac{1}{2}(l - 3c)$ has run out.

15751. (Communicated by J. A. H. JOHNSTON, M.A.)—Two light rods OA, OB, of equal length l , are hinged at a fixed point O, and carry heavy rings of equal mass m at the ends A and B. A third light smooth rod runs through the two rings and is hinged at a point P, vertically above O, at a distance l' from it ($l' > l$). The whole is started from the configuration in which A and B are vertically above and below O respectively, by impressing an angular velocity ω upon the rod PAB. Show that when the angle AOB between the rods is 2θ the reaction at P is

$$[2ml'(\omega^2 - g/l)(l^4 - l'^4) \cos \theta] / [l^2 - l'^2 \cos 2\theta]^2.$$

15752. (Professor M. W. CROFTON, F.R.S.)—Show that $n^n - 1$ is divisible by $4n + 1$ if the latter is a prime number.

15753. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Solve in integers $\frac{1}{2}(q^2 + 1) = p^4$.

15754. (Professor NEUBERG.)—Pour qu'une substitution $x = (az + \beta)/(\gamma z + \delta)$

ramène l'équation

$$a_0 x^n + \frac{n}{1} a_1 x^{n-1} + \frac{n(n-1)}{1.2} a_2 x^{n-2} + \dots + a_n = 0$$

à la forme binôme $z^m - p = 0$, il faut et il suffit que les déterminants formés avec trois colonnes quelconques du tableau

a_0	a_1	a_2	...	a_{n-2}
a_1	a_2	a_3	...	a_{n-1}
a_2	a_3	a_4	...	a_n

soient nuls.

15755. (Professor SANJANA, M.A.)—Prove that the expansion of $\text{sech}^{-1} x^{\frac{1}{2}} + \log x^{\frac{1}{2}}$ is

$$\log 2 - \left(\frac{1}{2} \frac{x}{2} + \frac{1.3}{2.4} \frac{x^2}{4} + \frac{1.3.5}{2.4.6} \frac{x^3}{6} + \dots \right),$$

x lying between zero and unity.

15756. (Professor NEUBERG.)—Trouver $\int_0^1 \cos x \cos 2x \cos 3x \cos 4x dx$.

15757. (ROBT. W. D. CHRISTIE.)—Prove the following theorem:—

$$(\tan^{-1} 1/r^m + \tan^{-1} 1/r^{3m}) [(p^2 - r^{2m} - r^{6m} - 2)/2p] = \tan^{-1} \frac{1}{4}\pi$$

where r is a root and p a prime of form $4x + 1$. E.g., let $p = 2a^2 + 2a + 1, r^m = 2a + 1, r^{3m} = 2a^2$; then

$$[\tan^{-1} 1/(2a + 1) + \tan^{-1} 1/(2a^2)](2a - 1) = \tan^{-1} \frac{1}{4}\pi$$

for all values of a . ($a = 1$ gives Euler series.)

15758. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Show that the product of the two series

$$1^3 + 2^3 + 3^3 + 4^3 + 5^3 + \dots + n^3, \quad 1^5 + 2^5 + 3^5 + 4^5 + 5^5 + \dots + n^5$$

may be represented as a single series.

15759. (R. CHARTRES.)—Find the mean value of the $(2n)$ -th power of the area, the perimeter ($2s$) being constant, (1) of a triangle, (2) of a cyclic quadrilateral. Elementary proof wanted.

15760. (C. E. YOUNGMAN, M.A.)—Four points A, B, C, D, not concyclic, are inverse to the corners of a symmetrical figure, and P, Q, R, S are the centres from which A, B, C, D invert into an orthocentric group. If ABC be a fixed triangle, show that D, P, Q move on one or other of its Apollonian circles, and R, S on a corresponding bicircular quartic (inverse to a rectangular hyperbola) which is its own inverse for the circles ABC and DPQ.

15761. (Professor GENESE.)—Prove that there always exists one point which has the same tetrahedral co-ordinates with respect to any two given tetrahedra.

15762. (Professor NANSON.)—If two pairs of opposite edges of a tetrahedron are conjugate with respect to a quadric, then the third pair is so also.

15763. (Professor SANJANA, M.A.)—If P, Q be any two points isogonally conjugate with regard to the triangle ABC, then

$$(AP.AQ)/(AB.AC) + (BP.BQ)/(BC.BA) + (CP.CQ)/(CA.CB) = 1.$$

Hence prove that

$$(i.) a.m_1.AK + b.m_2.BK + c.m_3.CK = \frac{3}{2}abc,$$

where m_1, m_2, m_3 are the medians and K is the symmedian point;

$$(ii.) a.AI^2 + b.BI^2 + c.CI^2 = a.AI_1^2 - b.BI_1^2 - c.CI_1^2 = abc,$$

where I is the in-centre and I₁ the first ex-centre;

$$(iii.) a.AP + b.BP + c.CP = abc/R,$$

where P is the orthocentre.

15764. (R. F. DAVIS, M.A.)—The tangent at A to the circum-circle of the triangle ABC meets the base BC produced in T. From T perpendiculars are drawn upon AB, AC, meeting the circum-diameter through A in P, Q respectively. Prove (geometrically) that P, Q are equidistant from the circum-centre.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, March 9th, 1905.—Prof. A. R. Forsyth, President, and temporarily Dr. E. W. Hobson, in the Chair.

Dr. W. H. Eccles and Mr. J. F. Cameron were elected members. Dr. W. H. Eccles and Mr. H. Bateman were admitted into the Society.

The following papers were communicated:—

"On the Projection of Two Triangles on to the same Triangle," by Prof. M. J. M. Hill, Dr. L. N. G. Filon, and Mr. H. W. Chapman.

"The Weddle Quartic Surface," by Mr. H. Bateman.

"On the Complete Reduction of any Transitive Permutation Group, and on the Arithmetical Nature of the Coefficients in its Irreducible Components," by Prof. W. Burnside.

"On the Theory of the Logarithmic Potential," by Prof. T. J. P.A. Bromwich.

"Alternative Expressions for Perpetuant Types," by Mr. P. W. Wood.

Prof. Forsyth made an informal communication "On the Theory of Geodesics."

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
 Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.** Annual Income, **£398,982.**

Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

DENT'S TEMPLE SERIES OF ENGLISH LITERATURE FOR SCHOOLS.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, Private Schools' Association, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m.

Hours for interviews—10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m. Saturdays until 3 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatorio, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

TO PRINCIPALS OF SCHOOLS.

—The Rev. G. E. MACKIE, Chief Secretary and Inspector of the Church Schools Company, is prepared to visit Schools in any part of England and confidentially advise Principals on all matters connected with Recognition of Schools, Registration of Teachers, Government Grants, &c. Consultations by post or at the Church House, Westminster.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

THE PSYCHOLOGICAL AND LOGICAL FOUNDATIONS OF INTELLECTUAL EDUCATION.

To be delivered by W. E. JOYNSON, M.A., Sidgwick Lecturer in Moral Science in the University of Cambridge.

The First Course of Lectures (Thirty-third Annual Series) commenced on Thursday, February 9th, at 7 p.m.

The Course, consisting of Twelve Lectures, will deal with Education, on its intellectual side, as based upon psychological and logical theories. References will be made throughout the course to the practical problems of teaching, and a constant endeavour will be made to show how theory may throw light upon practice. Directions will be given as to reading, and opportunities will be given after each lecture for the discussion (i.) of questions proposed by the students attending the course; and (ii.) of their answers to papers which will be set from time to time by the Lecturer.

S Y L L A B U S.

I.—The definition of education as a practical science. Its dependence upon the theoretical science of psychology. Its connection with the normative sciences of logic, aesthetics, and ethics. Education must assume general agreement in regard to the ultimate needs of life, and the criteria by which such ends are judged. It is a science of means, not of ends. The distinctions and relations between intellectual, artistic, and moral education. Practical aspects of the relations between mind and body. The scope and nature of so-called physical education.

II.—Methods and general results of psychological analysis. The chief methods of obtaining particular psychological data—(i.) the introspective, (ii.) the interpretative. Range, difficulties, and connections of these two methods. Special practical opportunities afforded to the teacher of contributing to psychological observation. The three fundamentally distinct factors of conscious experience—knowledge, feeling, activity: to be regarded as mutually dependent, not antagonistic. Education is concerned with the control of the conscious activities of the child. Forms and degrees of activity.

III.—Preliminary definitions of technical terms in psychology. Conation; desire and aversion; purpose; interest; attention. The intellectual processes arranged in a rough scale according to order of development and defined: sensation, perception, observation, memory, imagination, conception, reasoning.

IV.—General principles of intellectual development. Retentiveness and modifiability. Differentiation and assimilation. Facility and familiarity. Practice and habit. Mental process and mental product. Acquisitions and applications. Active and receptive phases.

V.—The reference of intellectual processes to so-called faculties. The practical errors that have arisen from a false view of the distinctions and identifications of faculty—things connected which should be separated, and things separated which should be connected. The key for understanding the due connection and separation of educational aims and influences to be found in the principle of unity of interest. Interest as progressive and as involving subjective activity. Two-fold function of the teacher in regard to interest. Aspects of the doctrine of apperception as applied to education.

VI.—Perception as a direct and purposive co-ordination of sensory and motor elements. The acquisition of physical dexterities and aptitudes by practice. Connected development of the organs of sense and the organs of movement. Sense discrimination aided by motor production—speaking, drawing, singing, &c. Imitation as an instrument in the development of perceptual process. Observation, as in listening and watching, involves prospective and retrospective attention determined by continuity of purpose and interest.

VII.—Association or suggestion. Association involves a process of reintegration depending upon a previous integration. The process may be analysed as involving the relation either (a) between parts contained in a common whole, or (b) between wholes containing a common part. Different forms of association. Control of association by purpose. Co-operative and antagonistic associations. Technical aids and pedagogic maxims based on the doctrine of association.

VIII.—Memory—Ambiguities of the term; sometimes limited to reminiscence. Broadly it includes the reproduction, in a connected series, either (a) of movements, (b) of images, or (c) of ideas. In particular verbal memory depends on a repetition of the articulatory movements of speech. This process is more or less accompanied and assisted by corresponding images and ideas. The use of language thus depends on a double process of association.

IX.—Imagination: its three kinds—reproductive, interpretative, and originitive. Imagination and perception regarded by technical psychology as occupying corresponding or parallel ranges. The power of imagination gauged by (a) its vividness and consequent influence upon feeling, (b) its subservience to purposive control. Childish imagination not more vivid, but less controlled, than that of the adult. Difficulties in exercising the child's imagination through the medium of words. Practically, imagination cannot be separated from ideation. Illustrations from the teaching of geography and history.

X.—Ideas and conceptions. Knowledge develops from the relatively particular and indefinite to the relatively general and definite. The function of comparison in this process of development. The absence of relations of difference in knowledge not to be confounded with the presence of relations of agreement: nor the absence of relations of agreement to be confounded with the presence of relations of difference. Growth of knowledge manifested equally in the apprehension of new points of agreement and of new points of difference.

XI.—Grammatical and logical account of the forms of speech. The sentence or proposition as unit of thought. The child's power of understanding to be measured by consistency and complexity in the use of language. The teaching of composition. Logical definition and division. The extension and intension of terms, psychologically and logically treated.

XII.—General judgments and reasoning. The avoidance of inconsistency. Deductive and inductive inference. The heuristic method important both in deductive and inductive teaching. Educational aspects of the comparative methods of induction.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

* * * The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course. C. R. HODGSON, B.A., Secretary.

A COMPANION TO GREEK STUDIES.

Edited by LEONARD WHIBLEY, M.A., Fellow of Pembroke College,
University Lecturer in Ancient History.

The contents include chapters on

- Geography, Fauna and Flora,
- History,
- Literature, Philosophy, and Science,
- Art, Mythology, and Religion,
- Public Antiquities,
- Private Antiquities,
- Criticism and Interpretation,

contributed by

- H. F. Tozer,
- Canon Tristram,
- R. D. Hicks,
- Sir R. Jebb,
- Dr. Henry Jackson,
- Dr. Gow,
- Dr. F. C. Penrose,
- Prof. E. A. Gardner,
- Dr. Waldstein,
- F. R. Earp,
- A. H. Smith,
- Prof. Ridgeway,
- Dr. Archer-Hind,
- L. Whibley,
- W. Wyse,
- R. J. G. Mayor,

- H. J. Edwards,
- Prof. Oman,
- A. B. Cook,
- Miss Harrison,
- Dr. Wilkins,
- Dr. M. R. James,
- F. Warre Cornish,
- Lady Evans,
- Prof. Allbutt,
- R. A. Neil,
- P. Giles,
- E. S. Roberts,
- J. Rendel Harris,
- Dr. Verrall,
- Dr. Sandys.

A PROSPECTUS WILL BE SENT ON APPLICATION.

Glasgow Herald.—"It is practically an extremely convenient encyclopædia of what readers of Greek books want, presenting as it does in a handy and concise form what would otherwise require to be sought in many volumes. . . . The book cannot fail to be serviceable as a book of reference in classical schools."

Journal of Education.—"A handbook that will be sure to find a place not only in libraries designed for the young, but also on the desk of the teacher and on the shelves of the scholar. The best way in which we can give our readers an idea of the new book is to remind them of an old. The 'Companion' does for Greek what Paul's 'Grundriss' does for Germanic philology. Only it is on a much smaller scale. It is a single volume of 700 pages. Into this compass there has been brought a great store of varied information, and that of a kind not contained in ordinary histories and grammars, about Greece, the Greeks, and their language."

M. TVLLI CICERONIS TVSCVLANARVM DISPVATIONVM LIBRI QVINQVE. A Revised Text, with Introduction and Commentary and a Collation of numerous MSS. By THOMAS WILSON DOUGAN, M.A., formerly Fellow of St. John's College, Cambridge; Professor of Latin in Queen's College, Belfast; Fellow of the Royal University of Ireland. VOL. I., containing Books I. and II. Demy 8vo, price 10s. net.

THUCYDIDES. Book VI. Edited, with Introduction and Notes, by A. W. SPRATT, M.A., Fellow and Tutor of St. Catharine's College, Cambridge. Extra fcap. 8vo, 6s. [Pitt Press Series.]

HARVARD LECTURES ON THE REVIVAL OF LEARNING. By J. E. SANDYS, Litt.D., Fellow and Lecturer of St. John's College, Cambridge, and Public Orator in the University of Cambridge; Hon. Litt.D. Dublin. Crown 8vo, 4s. 6d. net. [Nearly ready.]

KUMMER'S QUARTIC SURFACE. By R. W. H. T. HUDSON, M.A., D.Sc., Late Fellow of St. John's College, Cambridge, and Lecturer in Mathematics at the University of Liverpool. Demy 8vo. [Nearly ready.]

REVISED VERSION. SCHOOL EDITION. ST. JOHN: THE REVISED VERSION. Edited, with Notes, for the use of Schools. By ARTHUR CARR, M.A. Fcap. 8vo. [Nearly ready.]

ALREADY PUBLISHED.

ST. MATTHEW: THE REVISED VERSION. Edited with Notes for the use of Schools. By ARTHUR CARR, M.A. With three Maps. Fcap. 8vo, 1s. 6d. net.

ST. MARK: THE REVISED VERSION. Edited, with Introduction and Notes, for the use of Schools, by Sir A. F. HORT, Bart., M.A., and MARY DYSON HORT (Mrs. GEORGE CHITTY). 1s. 6d. net. Annotated editions of the Revised Version of St. Luke and the Acts of the Apostles are in preparation.

NOW READY. A NEW TRIGONOMETRY BY PROFESSOR LONEY. Intended for the use of Students commencing Trigonometry.

THE ELEMENTS OF TRIGONOMETRY. By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College (University of London). Extra fcap. 8vo, 3s. 6d. *School World*.—"The author's text-book of 'Plane Trigonometry' is so favourably known that nothing more need be said about the exposition of this book than that it possesses the merits of the larger work."

CAMBRIDGE LOCAL EXAMINATIONS, DECEMBER, 1905.

THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

TWELFTH NIGHT. With Introduction, Notes, Glossary, and Index, by A. W. VERITY, M.A. Seventh Edition. 1s. 6d. *Journal of Education*.—"The best school edition of the play that has come under our notice." *Athenæum*.—"A model of how a play of Shakespeare should be prepared so as to attract and not to repel young students."

The Educational Times.

Continuation Schools. So long ago as 1888 the Rev. Dr. Paton laid before the Royal Commission on Primary Education much extremely cogent evidence on the subject of Continuation Schools—schools to be held in the evening, or in other free time of young people that had passed from the day schools to work, in order to conserve and extend the information and training of the day school, and to confirm a habit of study and thoughtfulness. Since then not a little has been done in the establishment and organization of such schools. Still, however, there remains an urgent necessity that further steps be taken to reduce the evils yet rampant and to secure the benefits that are so desirable. To this end the Bishop of Hereford moved the second reading of his Bill in the House of Lords on April 7, and, though the attendance scarcely indicated enthusiasm for an amelioration of existing conditions, the brief discussion at any rate elicited expressions of opinion partly weighty on the merits, partly important as tactical indications. The motion was lost by 2 votes—16 to 14. The lack of interest in the question as shown by the scanty attendance is of grave import from the national point of view, when continuation schools have been for some twenty years almost universal in Germany, Switzerland, and Austria, and have been very rapidly extending in other Continental countries.

"There is enormous waste," said the Bishop, "in our present elementary system." Assuming the education to be good for the little way it goes, and admitting that some elements of information and training remain permanently in effective operation, yet one cannot but recognize that much is lost that might and ought to be preserved. Vast sums of money are sunk in foundations—better, no doubt, than in earlier times, but still, it must be granted, not so extensive and secure as they ought to be—and insufficient care is taken for the erection of a satisfactory, or indeed any, structure upon them. The need of the poor to avail themselves of the earning powers of their children at an early age is not to be denied. "It is right," Dr. Paton acknowledges, that such children "should be allowed to become half-timers at twelve, or to become full-time workers in factories at

thirteen." But then he goes on to emphasize the educational side of the matter: "it is necessary, if the very objects of a State education are to be fulfilled, that such a standard of attainment be enforced as would at once confer on a child an education that would make it of real service in life, and, if that standard of attainment is not reached at the age of thirteen—as it very rarely will be—then it must be worked for in the continuation school until he is sixteen, beyond which time the State is not likely to enforce school attendance." Where there is an interval between school and regular work, there is for boys the mischief that "evil associations and habits are formed by their loafing about the streets, trying to pick up odd jobs," or at any rate the mischief of laxness and indefiniteness of aim. Where regular work is entered on, there is a sense of emancipation from school and school work, powerfully reinforced by the counter attractions of athletic or other games, or of vacuous idling. Dr. Percival said that "his own experience had very strongly impressed him with the needs of the vast number of growing lads to be found in country villages who were allowed to grow up in ignorance and the monotony of whose lives to a great extent destroyed their manliness." The Archbishop of Canterbury, who expressed his deepest sympathy with the object and purpose of the Bill, adduced confirmatory evidence. "The extent to which a boy who left school at fourteen might lose all the education he had acquired," said the Archbishop, "was really appalling. By an investigation made some years ago in the Eastern counties into the educational status of a hundred boys taken at haphazard from the ranks of the agricultural labourers, it was found that of boys between sixteen and eighteen one quarter could write fairly, one quarter moderately, and quite one half could only write in the most disgraceful manner; while in arithmetic 75 per cent. could not answer a single one of the simple questions set. Yet many of these boys had been in the elementary schools a few years before, and some of them had attained the sixth standard." He concluded, therefore, that "something must be done, in one way or another, to keep alive the learning that was acquired by these children during their years at school. The exact process was a subject of discussion in which difference of opinion might reasonably exist; but there could be no doubt that to allow to go to waste the education which had

been given to the young, at much labour and expense, must be most injurious to the country." The mischief is beyond dispute: the thing is to devise the right remedy.

The remedy provided by the Bishop's Bill was framed on the lines drawn by Dr. Paton in his evidence seventeen years ago: fix thirteen as the minimum age for total exemption, and, where the required standard of attainment has not been reached, make total or partial exemption conditional on attendance at a recognized evening continuation school till sixteen, or till the standard is achieved; but fix the minimum total exemption age at twelve "in the case of boys who have definite agricultural or horticultural employment, and whose parents desire that they shall be so employed," provided they attend evening continuation school up to sixteen. The twelve-year limit was a new concession to conciliate the various phases of agricultural interest; and another novel feature was the provision that, "if the parent of the boy or girl so requires, attendances at a Sunday school or Bible class not exceeding in the aggregate thirty hours' duration in any one year shall be reckoned for the purpose of calculating the required number of attendances as if they were attendances at an evening continuation school"—a provision inviting the support of all classes of the clergy and of all persons desirous of keeping growing lads on Sundays within the circle of good moral and spiritual influences. The Bill was merely permissive, enabling Local Education Authorities to adopt these measure in by-laws made by them under the Elementary Education Acts. The proposals appear to be very modest, as well as thoughtfully adapted to the end in view.

Lord Londonderry, while admitting that the Bill "dealt with a question of great interest and great importance in the educational training of children," and regretting that what was very expensively learned in the schools was so quickly forgotten, advanced official objections to the particular remedy proposed. He could not advise assent to a new principle he found in the Bill—the application of compulsion to secure attendance at other than elementary schools. Surely it is a very technical view to call such schools "other than elementary schools," and to bring them under Part II. of the Education Act of 1902 as giving "secondary" education. The Bill, says the *Morning Post* (which now, under the editorship of Mr. Fabian Ware, is doing excellent service by extended discussion of educational affairs), "would have been workable with School Attendance Committees; but minute local variations in the by-laws are now no longer possible. The uniformity of the county by-law would be spoilt and its enforcement rendered more difficult if attendance at evening schools were made compulsory in those country districts where there was a good school of that type." It is difficult to treat this criticism either as serious or as humorous. But our contemporary frankly meets Lord Londonderry's argument from additional expense to the ratepayer by pointing out that the Bill was "purely permissive," and, moreover, that "many more evening schools are, and will be, required, compulsion or no compulsion." The minor arguments that the Bill would operate most unfairly on parents whose children had shown special talent and might not have the same need as others to remain at school till sixteen, and that the Sunday school provision

would entail the formidable undertaking of State inspection, need only be mentioned. These lions in the path will scarcely daunt the "prophet or leader" desiderated by the Archbishop to show the country how to reach the right solution: "he was perfectly clear that some measure of this kind was urgently needed." Dr. Percival may well be satisfied with the sympathy he has evoked, and encouraged by the weakness of the arguments that have temporarily defeated him.

Ways and Means.

IN no department of public activity is the unexampled vigour of the energies of the country more marked than in the sphere of education. Primary education has been set in a fresh framework in England; it is on the point of being readjusted in Scotland; and a constant cry for reform is coming over from Ireland. Secondary education already requires a liberal expansion of recent provisions, and all the Universities are hampered for lack of means to their ends. Institutions like Reading and Hartley have risen to be University Colleges. The University Colleges at Liverpool, Manchester, and Leeds have developed into Universities; Sheffield has got promise of its charter; and elsewhere local ambitions have been stirred to emulation. In all these cases the public spirit of the citizens has been conspicuous and discerning, and in due time they will reap a manifold reward. In other cases—where there is less concentration of interest, or where (as in London) the public spirit is so diffused and distracted that it is apt to be inapproachable, inefficient, or even dormant, or where the means of contribution to admittedly desirable ends are less abundant—the cause of the higher education is more difficult to sustain. During the past month the plaint of the sturdy educational beggar has been resounding from all quarters. The Welsh University has issued an appeal on behalf of its Fellowship Fund, which was opened in 1897 as a memorial to Queen Victoria on a basis of voluntary support. The fellowships are for research students, and the results of the existing endowments "are regarded as quite satisfactory." Newnham College also has issued an appeal for funds in aid of the endowment of research fellowships, to be held during extended residence in college after completion of the ordinary university course. There is, no doubt, sympathy enough and money enough ready to meet the Welsh and Newnham requirements of the moment, and we should hesitate to discourage generosity in this direction in view of the records of good work accomplished and experience gained; yet, on general grounds, one cannot but incidentally hint a doubt whether it is not possible to advance research more effectively at less expenditure by a different application of funds.

But the Welsh and the Newnham needs are thrown into the shade by the bold appeal of the Bedford College for Women, endorsed by the authorities of the University of London, for £150,000 to provide a new site and a new building, and for £100,000 to increase the endowment fund. The lease of part of the premises expires in 1909 and the lease of the rest of the building expires in 1928, and the landlord declines to sell the freehold; so, altogether, a fresh building elsewhere is considered necessary for the continued existence of the institution. The claims of Bedford College on the

generosity of all that value education, and especially on all that appreciate what the college has done, and is doing, for the promotion of the education of women, are multiplied and great. Unhappily, the difficulties of an educational quest for money in six figures in London are also great: it is only exceptional energy and insistence that can bring possible London benefactors to understand the nature of the want or even to know of its existence. University College has succeeded wonderfully in its recent appeal, and yet how very far have results fallen short alike of its needs and of its deserts! We trust Bedford College will be still more successful; for its deserts also entitle it to satisfaction of its present needs.

The Chancellor of the Exchequer deserves much credit for his expansion of the University Colleges grant to double its former amount; but, after all, it is only £54,000, and what is that among so many as fourteen? Even when it rises to £100,000 next year it will be far from adequate to the needs of the fourteen institutions, after all supplementary sources have been drained. The Committee of Allocation, it will be remembered, stated in their third report that they were particularly impressed by the absence of provision for post-graduate scholarships and fellowships, the lack of equipment in books and scientific apparatus, and the insufficiency of remuneration of many of the teachers. The meaning of these deficiencies has yet to come home to the minds of our statesmen. Even the University of London itself is starved in most important departments for sheer lack of funds. What might it not do for the nation if it were endowed by the State on the same scale as the University of Berlin, or even as the smallest of the German universities? In 1903 the State allowance of Berlin University was 2,904,745 Marks (say £145,000); that of Münster University, 370,508 Marks (say £18,500); and the German figures are not fixed, but advance boldly in response to the national requirements.

NOTES.

THE selection of a new Head Master of Eton has occasioned more journalistic excitement than the appointment of a new Cabinet Minister. Perhaps rightly, for the salary is said to be much higher, and the post is a permanency. Moreover, as the *Manchester Guardian* says, "it is really a matter of somewhat exceptional consequence to the public who the Head Master of Eton is: he has in some degree in his hands the training of an extraordinarily large proportion of those men on whom our old-fashioned public life still showers disproportionate opportunities of prominence and influence—the men who, like Gladstone, Lord Rosebery, and Mr. Balfour, are offered gratis on coming of age what men like Mr. Morley and Mr. Chamberlain only achieve by the labour of half a lifetime." Opinions naturally differ on the question whether the appointment of the Rev. the Hon. Canon Lyttelton was the best available: so much depends upon the standard of judgment. It may be that neither scholarly attainment nor educational achievement was the determining consideration; it may be that "a brilliant athletic past, an interesting pedigree, and many friends" had not a little weight; high character

is a common matter of course. Not one of the candidates could pretend to fill the shoes of Dr. Warre; but, comparisons apart, we have no doubt that Canon Lyttelton will justify the choice of the electors. The *Morning Post*, whose opinion on an educational point is now esoteric, believes him "to be a strong man," and "knows that his judgment on educational matters has been matured by experience and deepened by enthusiastic study." So far good, certainly; but it may be doubted whether his purely educational qualities have been, or will be, among the most prominent elements of his success. He has other qualities, however, that will secure for him the confidence of Eton and of the parents that look to Eton. As for reforms—modern subjects, hygiene, beagles, and so forth—we shall see.

THE report of the Education Committee of the London County Council on the non-provided schools within the London area is a document of serious and far-reaching import. It sets out details of the survey of 438 schools. For various defects of structure some 25 per cent. of these schools are "considered unsuitable"—so entirely unsuitable that "it has been found impossible to make suggestions for improving them so as to meet the Council's requirements." The drains are generally bad. "No fewer than 342, or 78 per cent., of the school drains tested have been declared unsatisfactory; 89 failed under the water test, 30 under the smoke test, and 218 under both." "In 26 cases the managers have refused to allow tests of any kind to be made"—a strangely futile proceeding, and calculated meantime to cast suspicion on the drains. If the Committee's recommendations are adopted, there will be a total deficiency of 68,824 school places—41,884 on account of the closure of schools or departments, and 26,940 on account of the reduction of accommodation in existing schools due to the operation of the resolution in reference to the ten square feet basis; and the total annual additional cost to the Council will amount to £224,000. "Further, it appears that the total cost to the Council of the transfer to it of the duty of providing for the elementary education of children now accommodated in non-provided schools will amount to £523,495 a year." An additional rate of nearly 4d. in the pound is not a cheerful prospect for the London ratepayer—especially in eastern suburbs. The displacement of many hundred teachers, too, if only temporary, is no light matter.

THE presumption is that the demands of the Council are neither oppressive nor unreasonable, but simply in accordance with their own standards. Any severer requirements would certainly not be supported by the Board of Education. All reasonable requirements the managers will no doubt make efforts to carry out; but, in view of the difficulties of maintaining the schools in the past even at their inferior standard, and assuming a certain latitude of time, and even a certain relaxation of some of the Council's demands, it is impossible not to anticipate a serious crisis in more ways than one. Grave as are the facts presented by the Committee, it is a crude judgment to regard them in the mere mechanical aspect; for, whether one sympathize with the

conscientious aims of the managers and supporters of these unfortunate schools or not, the fair—not to say the generous—mind will recognize both an arduous and a noble struggle under untoward conditions. How far, if at all, the Education Department itself is chargeable with “neglect and inefficiency,” as was urged in the House of Commons, depends upon facts that do not as yet appear: the conditions of the case may fairly be held to have justified a safe and reasonable indulgence. It is especially gratifying to learn that “in spite of the unsatisfactory conditions under which the majority of the teachers have been working, the teaching was reported as being ‘unsatisfactory’ in only 9 per cent. of the schools”; and “the inspectors have also been very favourably impressed by the tone and discipline in a large proportion of the non-provided schools.” Meantime we must await developments.

THE educational troubles of East Ham have also taken a disquieting form. The Town Council has decided to close the schools from the first of June next, and has sent the teachers—nearly seven hundred—notice terminating their engagements. This startling step is in no way political: it is purely financial—the strain of the rate is intolerable. The rate is 3s., and the erection of three new schools to meet the admitted needs of the population would bring it to the unparalleled figure of 3s. 9d.; moreover, the due administration of the Education Act necessarily implies further increase. The burden is not made easier by the contemplation of rates of a few pence in some other suburbs of London. It would not be surprising if several neighbouring districts under similar pressure followed the example of East Ham. At a conference of representatives of twenty-five Education Authorities, recently held in London, it was unanimously resolved that “the time has now arrived, pending the settlement of the whole question of local taxation, when immediate relief should be granted to those bodies which are inequitably treated in the demands made upon them for educational purposes.” Neither the Prime Minister nor the Chancellor of the Exchequer would receive a deputation to ask for relief in the Budget; and the Budget, when it came, brought no relief. So East Ham strikes for a grant in aid, and other districts of the 25 at least regard their action with sympathy.

It was time to apply some critical tests to Educational Exhibitions. The conclusions drawn by Mr. Edson from a study of the recent St. Louis exhibits, which we reproduce elsewhere, may be usefully applied to other exhibitions, of whatever magnitude. In connexion with Mr. Edson’s article, we quote from an early page of Mr. W. H. Winch’s admirable “Notes on German Schools”:

It is of little use to pile up work in educational exhibitions, or to show samples of great excellence, unless we know the conditions of their production, the age of the pupils, their length of school attendance, the regularity of that attendance, the number in class, and the time devoted to the particular subject of instruction. In fact, much of the excellent work thus shown inspires in experienced teachers very grave doubts as to the fairness of its production. It is not difficult to get such work done if other subjects and other pupils are comparatively neglected; and there is a direct temptation to this neglect if schools are to be estimated by the special work in special subjects

of a few picked scholars. I am not arguing for the abolition of Exhibitions—far from it; I am pleading only that they should be scientific in the best sense of that much-abused word. Moreover, even opinions formed by the inspection of work done under normal conditions may be very misleading, unless these impressions are carefully checked by actual tests.

Clearly, apart from definite and full details, an exhibition can produce only a general impression of positively attainable results. The true significance of the results, however, can be revealed only by analysis. The essential educational value of the exhibits will not be reached without an examination of the whole of the relevant conditions under which they originated and developed. As Messrs. Edson and Winch indicate, a general view, without the detail of circumstances, may readily enough lead to wholly wrong impressions, and to consequent mis-distribution of praise and blame, and to deceptive lines of work.

THE Spring Graduation ceremony at Glasgow University appears to have been about as lively as usual. Both the Latin prayer and the announcement of the qualifications of the honorary graduands were blurred into unintelligibility “by catcalls and other ebullitions of undergraduate humour,” and Principal Story abandoned his address rather than “give the opportunity for renewal of the howling disturbances and gross discourtesies” of the day. Dr. Story seems hopelessly unable to come to an understanding with his young barbarians, all at play. Yet, if he were as much philosopher as he is historian, he would perceive that they are really improving. Has not his philosophic countryman, Lord Kames, left on record the observation that “when a people begin to emerge out of barbarity, loud mirth and rough jokes come in place of rancour and resentment”? And Lord Kames gives an illustration, with a practical hint annexed. “About a century ago”—that is, well over two centuries now—“it was usual for servants and retainers of the Court of Session in Scotland to break out into riotous mirth and uproar the last day of every term, throwing bags, dust, sand, or stones all around”—just as students make “all around” hideous with riotous mirth and uproar, and the contents of pease-meal bags on occasion of Rectorial elections and inaugural addresses. This particular “disorderly practice,” he tells us, was “prohibited under a severe penalty [Act of Sederunt, February 21, 1663] as dishonourable to the Court and unbecoming the civility requisite in such a place.” If Scottish principals cannot exercise a few more centuries of patience, is there not open to them some proceeding analogous to an Act of Sederunt, such as may effectually protect the honour of the Senate and secure “the civility requisite in such a place”? Still, it may be somewhat difficult for Glasgow to take a hint from Edinburgh, particularly a hint some two centuries and a half in advance.

THE Bishop of London will define the action which he thinks best to take with regard to the report of the County Council Education Committee (if adopted by the Council), in his Diocesan Conference address on May 17, in the Great Hall of the Church House. A conference of the managers of the schools chiefly affected by the report will be called before the Diocesan Conference.

SUMMARY OF THE MONTH.

THE President of the Board of Education has appointed, with the concurrence of the President of the Local Government Board, the following an Inter-Departmental Committee (1) to ascertain and report on what is now being done, and with what result, in respect of medical inspection of children in public elementary schools; and, further, (2) to inquire into the methods employed, the sums expended, and the relief given by various voluntary agencies for the provision of meals for children at public elementary schools, and to report whether relief of this character could be better organized, without any charge upon public funds, both generally and with special regard to children who, though not defective, are, from malnutrition, below the normal standard:—Mr. H. W. Simpkinson, C.B., Assistant Secretary of the Board of Education, Chairman; Mr. H. Franklin Parsons, M.D., Assistant Medical Officer under the Local Government Board; Mr. C. Jackson, Chief Inspector of Elementary Schools under the Board of Education; the Hon. Maude Lawrence, Chief Woman Inspector of the Board of Education; Mr. R. Walrond, Senior Examiner of the Board of Education; with Mr. E. H. Pelham, Junior Examiner of the Board of Education, as Secretary.

A VIGOROUS address on the aims and progress of the Froebel system was delivered at the annual meeting of the Froebel Society (March 29) at the College of Preceptors by the President, Mr. J. H. Badley, M.A., Head Master of Bedales School. Mr. Badley pointed out the marked difference in the training of a young child under the Froebel methods now as compared with the processes of some years ago. Froebel compared a child to a garden, and all Froebelian teachers are taught to believe in the individuality of each child and his right to think for himself. "As educators," said Mr. Badley, "it is our business to impress our will upon the child, but it is also our duty to respect his individuality, to allow him to follow out his own interests, and develop his powers in his own way. The aim of education old and new is the same, and it is only the method which differs. Whereas it used to be quantity, it is now quality, and therefore the means by which knowledge is to be acquired becomes most important. In the old days receptivity was everything, now it is initiative. Froebel started from the study of child nature, and it is this which makes his system so far reaching and applicable at all stages. We followers of Froebel believe it responds to Nature, and makes a child able to make the most of life. It is a revolution, and we are tempted to pull down everything in order to build new foundations." Mr. Badley then went on to show that there is a real danger that the new methods may be confused with the spoiling of a child. Mr. Badley thinks that there are three main objects for the teacher to remember. First, to see that the child has a proper motive and interest; second, to see that the child is able to realize this purpose to a satisfactory conclusion; and third, that he is made responsible for what he does. The test of teachers is their power of inspiration. A child's obstacles must be met, but he must not be lifted over them. A very important point to remember is that all manual work should be really constructive and useful, so that mind and muscles may be fully exercised. To think out ways by which the work can be made more real should be a great object of all Froebelian teachers, whilst they must have a wide range of interest and knowledge, so that they may give each individuality an equal opportunity for work. The value of drill—not only physical but mental—must also be remembered as the means of developing self-control and the power of expression.

At the second session of the Teachers' National Union Conference at Llandudno (April 25), Mr. Tudor Walters (Leicester), President of the Association of Education Committees, delivered an address on "Secondary Education." The Education Act of 1902 would, he said, give the Local Authorities an opportunity of dealing on a comprehensive scale with secondary education. In a great commercial community like ours classical education appealed only to a limited number of people. He did not think it right and proper that the "dead hand" of the past should always control the methods of our secondary education, or that the traditional adherence to these methods of secondary education was best calculated to promote the highest interests of the country. It was conceivable that the pious donors of these charities would have their wishes better carried out by the

adaptation of educational institutions to the needs of the present day, and it was not good that those ancient charities, vast endowments, and splendid equipments should be controlled by cliques, however learned they might be. Many of these benefactions were intended for the children of the poor, and that they should have been so entirely appropriated to the benefit of the wealthy classes was a breach of faith and a departure from the intentions of the original founders. They were all aware of the good work the higher-grade schools had done before they were overwhelmed by the famous, or infamous, Cockerton judgment. Now, under the Education Act of 1902, they wanted to establish genuine municipal technical schools all over the country. He laid emphasis first on the absolute municipal control of these schools, which must be worked without the intervention of bodies of governors. The Local Authority must have the entire administration of the internal machinery of the schools. Then as to fees and free places, they must have absolute local option, because the fees to be charged and the proportion of free places varied in the different towns, and varied also enormously in different districts of the same town. Then he insisted that these schools must be recognized by the Board of Education, and receive a liberal scale of grant without respect to these questions of fees and free places, but only dependent on suitable buildings, adequate staffing, and a proper curriculum.

M. CANIVET delivered an extremely interesting lecture to a large gathering of the Société Nationale des Professeurs de Français en Angleterre (March 25) on "The Old Mother," the *harn-goz*, as all true Bretons call "La Bretagne" (Brittany). After a rapid review of the history of the old French province, he described its inhabitants of the present day—an ancient superstitious population, Christian to all outer seeming, but still retaining the old druidic belief at the bottom of their hearts; a poor hard-working people, among whom linger the practices and customs of five hundred years ago. M. Canivet concluded his lecture with an enumeration of the qualities, good, bad, and indifferent, of his countrymen; and we fear he was not at all partial to them. A hearty vote of thanks, moved by M. Le Pasteur Dégremont, who presided, and seconded by M. Miussen, was accorded to the lecturer.

THE School Nature-Study Union held its second public discussion meeting at the College of Preceptors (April 7), Mr. C. B. Gutteridge in the chair. Mr. Cross, Science Master at Addison Gardens School, read a paper on "How to teach Nature Study in a London School." Common objects continually before the notice of young people were shown to be the right subjects for profitable study that would lead them on to think and then to do something for themselves, thus getting at the production of their own self-activity. An interesting discussion followed. Mr. Cross in his reply illustrated his remarks by a specimen lesson with the use of the blackboard, and showed some of the papers written by his young students. It may be mentioned that two very useful pamphlets (1d. each) have been drawn up by the Executive Committee of the Union: (1) "A List of Books on Nature Study," (2) "Facilities for Nature Study offered by Museums and Gardens in and near London." Miss Holmes (Bedford College, York Place, Baker Street, W.) is the London Secretary, and Miss K. M. Hall (Borough Museum, Stepney) Hon. Treasurer.

THE Carnegie Dunfermline Trust have under consideration a proposal to form a College of Hygiene and Physical Culture in the town. A recent report of the Baths and Gymnasium Committee recommended the institution of such a college, with a two years' course: (1) anatomy, physiology (practical and theoretical), hygiene, theory of movement and elementary mechanics, child study, first-aid ambulance; and (2) gymnastics in all its branches (including remedial gymnastics), games, dancing, swimming, teaching, student's lesson, and singing and voice culture. It would be necessary that students at the time of entering be at least eighteen years of age, that they give evidence of having had a good secondary education, and that they present a medical certificate of health and of ability to undertake the course of study and of training. School-children suffering from bodily defects should be placed under medical supervision, and their physical training adapted to their needs. These considerations point to the conclusion that there ought to be (1) a reliable medical examination of all school-children. In order to avoid difficulties, this examination might in the first instance have

reference to such things as eyesight, hearing, and other matters that would not excite prejudice or raise opposition. (2) Medical advice ought to be at the call of physical training teachers, to guide them in dealing with special cases. The trustees expressed general approval of the report in respect of the following three proposals:—(1) the scheme for the institution of the college, including the provision of a residence for students; (2) the recommendation as to the medical examination of school-children and the provision of remedial treatment in special cases; and (3) the appointment of one or more pupil-teachers. The Committee was authorized to consider and further mature the proposals, and with that view to enter into negotiations with lecturers, medical advisers, and others, and to report to a subsequent meeting of the Trustees.

THE following resolutions have been adopted by the General Committee of the Secondary Teachers' Association of Scotland on the Training of Secondary Teachers:—“(1) that the training of secondary teachers, after the stage of the Leaving Certificate, should be given at the university; (2) that teachers of the higher branches should, as a rule, have specialized in their particular subject or subjects; (3) that, after a qualifying examination, recognized by the State, candidates should undergo a course of professional training, either in connexion with a Faculty of Education in the university or in a training college or in a secondary school recognized for that purpose; (4) that, after the conclusion of their professional training, candidates should undergo a period of probation in a secondary school under the supervision of the school authorities.”

At the Grocers' Company's School at Hackney Downs on the occasion of the last distribution of prizes under the existing régime (April 15) the Rev. C. G. Gull, who has been Head Master twenty-four years, said he hoped the name of the school might be continued without change, and he was quite sure that the London County Council were not anxious to cut the school off from its association with the past. There was no danger, he believed, of the County Council interfering with the details of the institution. He took it that, while the governing body would be changed, the spirit of the school would remain. During the time he (Mr. Gull) had been Head Master from one-third to one-half of the boys attending the school were the children of Non-conformists; and he desired to mention that at no time had any boy been withdrawn from the school owing to the nature or measure of the daily religious instruction.

At Girton College, Cambridge entrance scholarships have been awarded on the result of the recent examination in the following order of merit:—the Clothworkers' Exhibition of £60 a year for three years and one additional term to Miss A. Shillington (Queen's College, Belfast) for classics and Anglo-Saxon; the Skinners' Scholarship of £50 for three years to Miss M. Long (North London Collegiate School for Girls) for mathematics; College Scholarships of £30 for three years to Miss M. G. Tonkin (North London Collegiate School for Girls) for French and German; and to Miss C. Green (City of London School for Girls) for natural sciences; a Pfeiffer Scholarship of £20 for three years to Miss A. Woodward (University College, Nottingham) for classics; College Exhibitions of £15 for three years to Miss I. M. Mathews (Sheffield High School) for mathematics, Miss E. H. Pratt for French and German, Miss N. B. Drummond (St. Leonard's School, St. Andrews) for history, Miss M. Davies (King Edward's High School, Birmingham) for classics, Miss E. J. Ewart (Liverpool University) for classics, Miss L. Warren Jones (Blackheath High School) for mathematics, Miss M. G. Calthrop (Blackheath High School) for French, bracketed with Miss I. M. Massey (Tottenham High School) for German. The Gibson and Gamble Prizes, open to certificated students of the College, have been awarded as follows:—The Gibson Prize for an essay on some subject connected with the Greek Testament to Mrs. T. Kilpin Higgs; an essay by Mrs. J. H. E. Brock was highly commended. The Gamble Prize to Miss L. F. Waring for an essay entitled “Nature in Poetry”; an essay on “Samuel Daniel” by Miss E. M. Aldis was commended.

THE following elections have been made to scholarships and exhibitions at Somerville College, Oxford:—To a Clothworkers' Scholarship of £50 for three years Helen F. Miller, Oxford High School and private study (mathematics); to the Gilchrist

Scholarship of £50 for three years Dorothée de Zouche, Liverpool High School (classics); to the Coombs Scholarship of £50 for three years Matilda Snow, Oxford High School and private study (classics). To exhibitions of £20 for three years: Margaret C. Berry, private study (French); Violet Burton, Cheltenham Ladies' College (English); Arminella Hansell, private study (English); Annie M. Payne, South Hampstead High School (classics); Effie Ryle, Roedean School, Brighton (classics). Commended: Amber Reeves, Kensington High School (history); Anne P. Sumner, Columbia University (classics).

AT Lady Margaret Hall, Oxford, the following scholarship awards have been made:—To Olive W. Sinclair, High School, Clifton, the Jephson Scholarship of £50 for three years (mathematics); to Annie C. Heath, Ladies' College, Cheltenham, the Mary Talbot Scholarship of £40 (English literature); to Helen Gifford, Allenswood, Wimbledon Park, a scholarship of £30 (modern languages); to Dorothy K. G. Watkins, Durham University, bracketed equal with Miss Gifford, an honorary scholarship (classics).

AT St. Hugh's Hall the Clara Evelyn Mordan Scholarship of £40 a year for three years has been awarded to Frances M. Knipe, St. Stephen's High School, Clewer, and Edgbaston High School (English Literature), and a Hall Scholarship of £25 to Emily M. Duggan, St. Margaret's School, Bushey (mathematics).

AN “EX-SOLDIER” writes to the *Daily News* (April 13):

I arrived from India a month ago, after serving my country for eight years and a quarter, leaving with a very good character, and a First Class Certificate of Education, also an Acting Schoolmaster's Certificate, having had over six years in charge of children's and adults' schools in India, with invariably “V.G.” or “Excellent” reports at each examination of the school. Notwithstanding the cry of “No teachers,” I have been to London, Birmingham, Worcester, Brighton, and Portsmouth, and no one will have me as a teacher, labourer, or as anything else, evidently for the sole reason that I have been a soldier. There are hundreds of us in a similar predicament, having faithfully served our country, without a stain on our characters for a number of years, and now returned to the land of our birth to face starvation and destitution, and to die for the want of bread.

THE articles of agreement under which it is proposed to combine the Massachusetts Institute of Technology and Harvard University have been made public. Provision is made for a joint school of industrial science, to be known under the present name of the Institute of Technology, to be governed by an executive board of nine members, of whom three shall represent Harvard, and to be maintained by present Institute funds, augmented by the income of all funds of the Lawrence Scientific School, by three-fifths of the net income which may accrue from the Gordon McKay bequest, amounting to several millions, and by the income of all property which Harvard may hereafter acquire for the promotion of instruction in industrial science.

UNIVERSITIES AND COLLEGES.

THE negotiations have now been completed by which, London. under certain conditions, the Higher Examination of the Oxford and Cambridge Schools Examination Board and the Oxford Senior Local Examination will be accepted in lieu of the London Matriculation Examination and the London Matriculation Examination will give exemption from Oxford Responsions. A similar arrangement for the mutual recognition of certificates was concluded with Cambridge a short time ago.

MESSRS. DAVID ROLLO & SONS have offered to take Liverpool. two students into their engineering works every year, allowing them to count the time spent at the University towards their apprenticeship, provided that the students have graduated as Bachelors of Engineering, preferably in Honours. Thus a full apprenticeship can be served by three years at the University and two years with Messrs. David Rollo & Sons. This arrangement will also satisfy the Board of Trade requirements, the Board having undertaken to recognize the time spent at the University under the Faculty of Engineering in the proportion of two years for every three years: but a total of four years' apprenticeship only is required by the Board. A student, therefore, taking advantage of Messrs. Rollo's offer, and

spending his vacations in the manner recently suggested by Sir Alfred Jones, would obtain an excellent training. It is hoped that other firms will follow Messrs. Rollo's example.

The Institution of Civil Engineers has resolved to recognize the ordinary degree of Bachelor of Engineering of the University of Liverpool as exempting candidates from the Associate Membership Examination of the Institution.

THE Army Council has been in communication with Manchester University as to the scheme submitted to the military authorities recommending certain amendments to the regulations under which commissions in the Army may be obtained by university candidates on the nomination of recognized universities. In the list of recognized universities arranged as units for purposes of nomination Manchester is grouped with Liverpool, the University of Wales, and the Royal University of Ireland. It is understood that the Committee of Manchester University have stated to the Army Council their opinion that the grouping of universities so far removed from each other cannot but lead to an unsatisfactory working of the regulations. The Nomination Board under such a scheme would be composed of representatives of each of the universities named, and it is felt that a Board so constituted cannot be wholly responsible for recommending candidates for commissions, especially when it is considered that perhaps one-half, or even three-quarters, of the members of the Board could have no personal knowledge of the candidates recommended. Further, it is contended that the number of commissions open to the recommendation of the universities so grouped are too few in number to justify the adoption of the Army Council scheme. The appointment of a fully qualified instructor in tactics, military law, &c., and considerations of a financial character were also dealt with in the communication of the Manchester University Committee.

The Advisory Committee for University Extension, in consultation with representatives of various educational committees of the district, has unanimously passed the following resolutions:—(1) that the Committee considers that the present system of university extension lectures to pupil-teacher centres produces valuable results, and would deprecate any radical change in that system; (2) that a system of instruction similar to that given by the universities to pupil-teachers might with advantage be used as a part of the preparation of acting teachers.

With the object of diminishing the number of different examinations for which schools are required to prepare scholars, and also to secure that successful candidates for university scholarships may be able to devote the whole of their years of study to work of a true University character, the Joint Matriculation Board of the Universities of Manchester, Liverpool, and Leeds have decided to offer the use of the Matriculation Examination for the purpose of the award of scholarships tenable in any of the three universities. In accordance with this policy the Matriculation Examination is made use of by the Education Committees of the counties of Lancashire and Cheshire and of the boroughs of Manchester, Liverpool, and Salford for the award of numerous university scholarships which these Committees offer. In the case of Lancashire and Liverpool, papers of a more advanced character are combined with the papers of the Matriculation Examination for other scholarships. The Gilchrist Trustees, by whom a scholarship has hitherto been given on the results of the Matriculation Examination, have given scholarships to the three universities under different conditions, and the Gilchrist Scholarship is now discontinued. The University of Manchester has accordingly determined to award a scholarship on the results of the July Matriculation Examination. The Gee Scholarships for medical students at the University of Liverpool and the medical entrance Scholarship to the University of Leeds are also awarded on the same examination. The scholarship examinations of each university are held separately in the month of May.

THE *Irish Times* states that a change in the method of election of Provost of Trinity College will shortly take place. By a Charter of Queen Elizabeth the Provost was elected by the Fellows, but by a Charter of Charles I. the right of naming the Provost was given to, and has since remained in, the Crown. The authorities are now considering the question of recovering for the Fellows the right of election.

The question of university education continues to be warmly discussed. A lecture by Dr. H. Brougham Leech, Regius Professor of Laws in the University of Dublin, delivered at Clontarf (March 23) and published in the *Belfast News Letter* (March 24), deals with the subject historically, and briefly comments on the recently proposed solutions.

AT a recent meeting of the Glasgow University Glasgow. Court Prof. Jones submitted a motion calling attention to the difficulty of bringing about changes in the curricula and other matters, arising from the fact that such changes could be carried out only if the four Scotch universities acted together. The Scotch universities, he said, were really very powerless to reform themselves except in insignificant ways. There were two particular reasons for this helplessness. One was that the Commissioners had unfortunately taken in hand to regulate details, and another was that, while the regulations permitted movement by each university, the machinery was so cumbersome as to make that movement extraordinarily difficult. In Manchester, Liverpool, Birmingham, or other University cities, such changes as he had indicated could be effected by the bodies themselves. These universities had a distinction in their charter which enabled them to decide for themselves. He thought the Scotch universities should have the same privilege. They enjoyed less liberty than any universities in England, France, Germany, or America. Prof. Stewart sympathized with the motion, but pointed out that, as a set off to the way the universities were tied hand and foot to the Commissioners, they gave extraordinary liberty to the students. The number of options they had in the Arts curriculum was fast becoming a scandal in educational circles, because it was impossible to tell what M.A. meant nowadays. He thought the Committee might consider that point also. The motion was adopted.

THE Prince of Wales will visit Cardiff for the Cardiff. purpose of laying the foundation-stone of the new University College on June 28, but much regret is felt that his Royal Highness will not be accompanied by the Princess of Wales. During his visit the Prince will be the guest of Lord and Lady Windsor at St. Fagan's Castle. The Mayor and Corporation propose to ask the Prince to accept the freedom of the borough.

CURRENT EVENTS.

A PAPER on "Chaos and Contradiction in Present-day Educational Thought" will be read by Mr. F. H. H. Hayward, D.Lit., M.A., at the meeting of members of the College of Preceptors to be held on May 17.

* * *

SIR HUBERT E. H. JERNINGHAM, K.C.M.G., Officier d'Académie, will address the Société Nationale des Professeurs de Français en Angleterre on "Quelques Souvenirs du Second Empire" at the College of Preceptors on May 27 at 4 p.m.

* * *

A SUMMER Holiday Course for teachers of young children, organized by Miss M. E. Findlay, with the assistance of Miss McMillan, Miss Lawrence (Principal of the Froebel Institute), and Prof. Findlay of Manchester, will be held at the Froebel Institute during the first half of August.

* * *

AT University College, London, Prof. Lyde's course on Regional Geography will be continued on May 4; and his course on Economic Geography on May 8.

The Jevons Memorial Lectures will be delivered by Mr. P. H. Wicksteed, M.A., on Mondays, at 6 p.m., beginning May 8. Subject: The Significance of Jevons's Work as an Economist. Open without payment or ticket.

* * *

PROF. LLOYD MORGAN, Principal of University College, Bristol, will lecture on "Imitation" to the Childhood

Society and the British Child-Study Association at Parkes Museum, Margaret Street, W., on May 12, at 8 p.m.

* * *

THE Ninth Annual Conference of the Parents' National Educational Union will be held in the Portman Rooms, Baker Street, W., on May 16-19.

* * *

THE Annual General Meeting of the National Educational Association will be held at the Westminster Palace Hotel on May 4 at 4 p.m.

* * *

EXCURSIONS of the London Geological Field Class, conducted by Prof. H. G. Seeley—this is the twentieth season—will be made on May 6 (Oxford), 13 (Northfleet), 20 (Uxbridge to Harefield), 27 (Guildford). Particulars from Mr. J. W. Jarvis, F.G.S., St. Mark's College, Chelsea, S.W.

* * *

PROF. ADAMS, University of London, is to deliver a course of lectures in the School of Education of the University of Chicago during the summer quarter.

* * *

THE Board of Education have just issued a list of twenty-four Holiday Courses which will be held on the Continent at different times during the present year, but mostly in the summer months. Six of the courses are in Germany—viz., Greifswald, Jena, Königsberg, Marburg, Neuwied, and Salzburg; four in Switzerland—viz., Geneva, Lausanne, Neuchâtel, and Basle; one in Spain—viz., Santander; and the rest are in France—viz., Besançon, Tours, Honfleur, Paris, Grenoble, Nancy, St. Servan, St. Malo, Villerville-sur-Mer, Boulogne, Caen, Bayeux, Lisieux, and Dijon. The paper issued by the Board of Education gives the date of each course, the fees, return fares from London, lowest cost of boarding, principal subjects of instruction, address of local secretary, and other details of importance to intending students. Copies of the paper can be obtained free on application to the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, London, S.W.

—♦♦—

PRINCIPAL DONALDSON of St. Andrews has been presented with his portrait in oils, painted by Sir George Reid. The presentation was made by Lord Balfour of Burleigh, the Chancellor of the University.

* * *

THE RIGHT HON. R. B. HALDANE, K.C., M.P., LL.D., has been elected Visitor of Bedford College, London.

—♦♦—

THE Glasgow and West of Scotland Technical College will receive £20,000 under the will of the late Mr. Donald (subject to Mrs. Donald's life interest), as well as the residuary estate.

* * *

BIRMINGHAM UNIVERSITY has received £20,000 under the will of the late Mr. Thomas Best.

* * *

MR. RICHARD PEYTON, who recently gave £10,000 to found the Chair of Music at Birmingham University, has now made a donation of £500 towards the foundation of a library of musical works. Mr. Francis W. V. Mitchell has also given £500, and Mr. John Feeney £25, to the same object.

* * *

THE Cardiff and District Teachers' Association has resolved to guarantee £500 towards the Mayor's Fund for

the location of the Welsh National Museum and Library in Cardiff.

—♦♦—

Scholarships
and Prizes.

Two exhibitions, £50 and £30, will be offered by Trinity College, Cambridge, to candidates selected for admission to the Indian Civil Service at the August competitive examination. Apply in writing to the Senior Tutor (with two years' certificate of character) by September 1.

* * *

CHRIST'S COLLEGE, Cambridge, offers a choral exhibition, £25 for 3 years. Examination June 15. Apply to the Dean.

* * *

EMMANUEL COLLEGE, Cambridge, offers an exhibition, £50 for 2 years, to an advanced student. Apply to the Master.

* * *

PEMBROKE COLLEGE, Oxford, offers 3 classical scholarships, £80 each. Examination, May 16. Apply for entry form to the Master or Senior Tutor, and return it by May 13.

* * *

Two scholarships, £50 each for 3 years, will be awarded to candidates (under 21, in need of assistance) intending to study Theology, in July. Examination, June 29. Apply to Rev. R. W. M. Pope, D.D., 4 Keble Road, Oxford, after May 22 and before June 6.

* * *

THE Lindley research studentship in Physiology in the University of London, £100 for one year, will be awarded every third year, commencing 1905.

* * *

AT University College, London, the Andrews Entrance Scholarships, the Campbell Clarke Scholarship, the West Scholarship, and the Clothworkers' Company's Exhibitions (Chemistry and Physics) are open. Notice of intention to compete by May 30. Examinations begin June 27.

* * *

AT Bedford College, London, the Reid Fellowship, £50 for 2 years, is open this session. Applicants must be graduates of the University of London and Associates of Bedford College. Apply to the Hon. Secretary of the Reid Trust by May 30.

Two entrance scholarships—one in Arts for 3 years (£31. 10s., £28, £28), and one in Science, £48 for 3 years, will be awarded on an examination to be held June 28-30. Entrance forms to be returned to the Principal by June 12.

Two scholarships for the course of Secondary Training beginning in October next will be awarded to the best candidate holding a degree (or equivalent) in Arts or Science. Apply to the Head of the Training Department by July 7.

* * *

THE Council of Manchester University has instituted a scholarship of £30 for 3 years, to be awarded on the results of the July Matriculation Examination.

* * *

LADY MARGARET HALL, Oxford, offers four scholarships (£50, £40, £35, £25), and St. Hugh's Hall, one scholarship (£25 for 3 years), for competition in March, 1906.

* * *

THE League of the Empire (Caxton Hall, Westminster) offers (1) a Lord Meath Empire Day Prize for Secondary Schools (Silver Challenge Cup, value £10. 10s., to be held by the successful competitor's school, with a personal prize of £5. 5s.) for essay (not more than 2,000 words); and (2) a similar Challenge Cup, with personal prize of £3. 3s. for primary schools, for essay of 1,000 words. Subject: "Empire Day: its foundation, purpose, and modes of celebration."

Appointments and Vacancies.

THE Principalship of the United Free Church College, Aberdeen, is vacant by the lamented death of the Rev. S. D. F. Salmond, D.D.

* * *

THE electors to the Beit Professorship of Colonial History at Oxford will proceed to an election in October. Applications to be sent to the Registrar of the University by October 1.

* * *

AT King's College, London, Mr. Peter Thompson, M.D., Ch.B. (Vict.), has been elected Professor of Anatomy; and Prof. Arthur Dendy, D.Sc., South African College, Cape Town, has been elected Professor of Zoology.

* * *

MR. STANLEY DUNKERLEY, M.Sc. (Vict.), Head of the Department of Applied Mathematics in the Royal Naval College, Greenwich, has been appointed Professor of Engineering in the University of Manchester.

* * *

DR. STRACHAN, Professor of Greek in Manchester University, has been appointed also Lecturer in Celtic.

* * *

THE Council of the University of Birmingham has decided to establish a Professorship of Civil Engineering, and an Assistant Professorship of History.

* * *

DR. A. R. FERGUSON, senior assistant to the Professor of Pathology in Glasgow University, has been appointed Professor of Pathology in the Medical School, Cairo.

* * *

MR. P. A. BARNETT has been appointed to the new post of Chief Inspector of the Board for the Training of Teachers.

* * *

APPLICATIONS for the Head Mastership of the City of London School are to be lodged with the Secretary by May 20.

* * *

MR. T. RAYMONT, M.A., Professor of Education in University College, Cardiff, has been appointed Vice-Principal of, and Master of Method in the Training Department of, the Goldsmiths' College, New Cross.

* * *

MISS CAROLINE GRAVESON, B.A., Mistress of Method and Lecturer on Education in the University of Liverpool, has been appointed Vice-Principal and Mistress of Method in the Day Training College, New Cross.

* * *

MR. J. H. HICHENS, M.A., Head Master of Wolverhampton Grammar School and formerly assistant and house master at Cheltenham College, has been appointed Head Master of the new King Edward VII. School at Sheffield.

* * *

MR. THOMAS M. MORRISON, M.A., acting Rector of Glasgow United Free Church Training College, has been appointed Rector. His father, the late Dr. Thomas Morrison, held the post for a long period.

* * *

Literary Items.

THE volume on "Ireland" in Messrs. Blackie's colour series is promised immediately. The illustrations are from paintings by Mr. Francis S. Walker, R.H.A., and the letterpress is by Mr. Frank Mathew—both Irishmen.

* * *

MESSRS. GEORGE PHILIP & SON have purchased from Messrs. George Routledge & Sons the following series of

reading-books:—Ludgate Story Readers, Ludgate Standard-Author Readers, Ludgate Nature-Study Readers, Ludgate Supplementary Readers, and Magnus's English Course.

* * *

MR. FISHER UNWIN has been awarded a silver medal for his exhibits in culinary literature at the International Cookery Exhibition, Leipzig.

* * *

MESSRS. WILLIAMS & NORGATE do well to draw fresh attention to the "Beiträge zur alten Geschichte," edited by Profs. Lehmann (Berlin) and Kornemann (Tübingen), in co-operation with an eminent international staff of contributors. The journal treats all aspects of ancient history, and accepts articles in English, French, Italian, and Latin, as well as in German.

* * *

Saint George for April is an exceptionally strong number. The Rev. Prof. Masterman writes on "Wordsworth as a Social Teacher," Prof. J. A. Thomson gives "Suggestions on Sociology," and Mr. J. A. Dale describes "Some Functions of a University."

* * *

Occasional Papers for April maintains its high ideal with vigour. "Stories, gossip, and the things upon which the popularity of the greater part of modern journalism is based have been ignored."

* * *

Child Life for April gives a sketch of the life and work of the late Mme. Michaelis (with photograph), and several substantial articles on Froebel and Froebel's principles.

* * *

THE Supplement to the *Lady's Pictorial* for April 8 gives a description of Girton and Newnham, with charming illustrations and interesting portraits.

* * *

A STRIKING sketch of "The People's University—Ruskin Hall, Oxford—with illustrations, appears in the *Young Man* for March.

It is proposed to raise funds for a testimonial to the Rev. Dr. Warre on his retirement from the Head Mastership of Eton, in commemoration of his long service to the college. Mr. H. W. Hoare, 96 Ebury Street, Chester Square, is honorary secretary.

* * *

THE University of London has issued a pamphlet containing the regulations for the selection of University candidates for commissions in the Army and details of the Courses of Instruction in Military Subjects to be held at the University. Communications relating to these regulations to be addressed to the Academic Registrar.

EDUCATIONAL EXHIBITS AT ST. LOUIS.

A COMPARATIVE ESTIMATE, WITH LESSONS.

IN the February number of *Education* (Boston), Mr. Andrew W. Edson, Associate City Superintendent, New York City, presents a careful review of the exhibits displayed on the seven acres of "the palace of education" at the St. Louis Exposition last summer. New York City and St. Louis naturally claim special prominence, and the contributions of the several States of the Union can only be treated summarily. What specially interests ourselves is Mr. Edson's review of the exhibits from foreign countries, and, in particular, the comparative position of those from Great Britain. Mr. Edson writes:—

GERMANY.

First among the educational exhibits from foreign countries was the one from Germany. This was noticeable in its completeness and excel-

lence, and especially in its perfect organization and in lines of illustrative apparatus. From the teacher's standpoint this exhibit was easily first of any in the educational building. A comparatively small portion of the exhibit was the work of pupils. Each enclosure had at its entrance a detailed statement of what was on exhibition within. In the elementary and secondary school sections, the exhibit of geographical models, relief maps, globes, atlases, and other illustrative apparatus was very complete. The apparatus for science teaching in the elementary grades, appliances for teaching zoology, anatomy, botany, mineralogy, geology, and mathematics were of unusual excellence. A large phonic chart of photographs of the face, giving the position of the lips in making the elementary sounds, was of special interest to visitors. The literature on all subjects, especially of books strictly professional, was very abundant.

In the University section there were large photographs of buildings, models, statues, articles from the excavations of the Roman citadel, Saalberg, and copies of the Babylonian flagstone pictures in colour. The display of scientific instruments for the teaching of astronomy, geodesy, optics, electricity, meteorology, thermometry, was very complete. The most extensive exhibit, however, was in the apparatus used in teaching medicine, surgery, pathological anatomy, bacteriology, and a Roentgen cabinet of the latest patterns.

SWEDEN.

The exhibit from Sweden was unusually good, in that it presented a carefully graded progressive exhibit of sloyd cardboard models, models in wood accompanied by drawings intended as a guide in executing the work, and models in metal, exhibits in knitting, darning, plain needle-work, and dress-making. The model of a school kitchen, or "cookery school," made to a scale of one-eighth, gave a very clear idea of the equipment for work in domestic science. The display consisted of samples for science teaching, as animal and vegetable products, samples illustrating processes of transformation from the raw material to the finished product, stuffed animals, preserved specimens, large darning and sewing frames for illustrating stitches, an adjustable combination desk for mechanical and freehand drawing, chemical equipment, and art work from the technical schools. School journeys and organized games were made a striking feature. This entire exhibit was intensely interesting and instructive to common-school teachers.

FRANCE.

The exhibit from France, although poorly arranged and widely scattered, had more of pupils' written work of interest to visitors than had that of any other foreign country. This exhibit consisted of sets of compositions on all possible subjects continued through a school year and bound into volumes. These papers were first drafts by pupils with teachers' frank comments on the margin. These volumes were well worth careful study, especially those on school excursions, and temperance teaching. On the latter subject, the compositions, profusely illustrated, described grape culture, wine making, the various steps in wine drinking, and the effects thereof. The work of pupils in paper cutting, pattern making, drafting, cutting, and designing were well worth careful study, as also were the recipes in domestic science and the school herbariums. The industrial and technical schools presented large and excellent exhibits in their several lines.

GREAT BRITAIN.

The exhibit from Great Britain was especially strong in its contribution from secondary schools and universities, and from art schools and special schools. The drawing, painting, statuary, photographs, and statistical tables made the enclosure a very attractive one. The actual amount of school work from the elementary schools was quite limited, and what there was was under lock and key, inaccessible except when the one in charge could be found. To any one interested in the education of mentally and physically defective children, the charts and statistical information from the Bristol and London schools were of absorbing interest.

Mr. Edson then makes important summary observations, holding that "from every point of view the educational exhibit at St. Louis was far ahead of any ever before made."

It showed clearly the advance in educational methods and results during recent years. It disclosed some defects in our work and pointed out wherein foreign countries excel, and at the same time it inspired in us confidence that, on the whole, our schools are well managed, and that our educational leaders are sane and safe. To any visitor who was sufficiently interested in education to make a careful inspection of the exhibits such an inspection could not but prove gratifying, while to those actively engaged in teaching it could not fail to be an inspiration to better directed effort. No matter how good work one may have accomplished, he found something in some line better than anything he had ever done. Such exhibits are a test of accomplishments, and tests always clarify one's views. This exchange of ideas must bear fruit in a quickening of interest in education and must give a fresh impulse to educational workers in every field.

OBSERVATIONS.

The following after-thoughts bearing upon educational ex-

hibits may usefully be borne in mind on occasions of less magnitude:—

1. Any educational exposition should give more attention to the organization of schools, and to aids, appliances, and devices, than to the work of pupils; that is, the exposition should be prepared from the teachers' point of view rather than from the pupils'. In this connexion statistical and graphic charts, photographs, and models may well form an even more prominent feature.

2. All exhibits from special and private schools should be in separate alcoves and be clearly marked as such, in order that it may be definitely understood whether the work presented is from public or private institutions.

3. There should be a more careful grading of exhibits, showing clearly the successive steps through the course of study. As a result of this careful grading there will be naturally a wise selection, less in quantity, but of better quality. And in this connexion a uniform system of grouping—by subjects or by grades instead of by towns and cities—should be insisted upon.

4. Large bound volumes are of little value. They are too bulky to be handled easily, and but few have time to examine them thoroughly. Small pamphlets giving the work of a class or of an individual for a year or a half-year are of much more value.

5. The written materials should show by consecutive lessons through a term or year the successive steps taken in the subject studied. Isolated exercises, however excellent, do not satisfy the close observer.

6. Each set of papers by pupils should have the first drafts, or, better still, first drafts with second drafts attached, accompanied by a definite and complete statement by teacher in reference to the conditions observed by pupils, the nature of the preparation, and the method of work. Visitors can then study the written work of classes with greater profit.

7. Courses of study, time schedules, and daily programmes should form a prominent feature of every exhibit.

8. School excursions to local industries afford material of great interest to visitors, in that the photographs and compositions show the life of the people. The subjects treated interest pupils and incite them to the best form of expression. Foreign countries, especially Germany, Sweden, and France, emphasized, and very properly so, the educational value of school excursions.

9. Each exhibit should have a printed pamphlet for distribution, giving a description of the contents of the enclosure and a brief explanation of the scope of the work attempted, the methods employed, and the results attained.

10. School exhibits are of little value without a competent attendant present, one who understands thoroughly local conditions, to explain the leading features to visitors.

In connexion with Observation 6, we may note that elsewhere Mr. Edson remarks: "The mistakes of pupils accompanied by frank criticism of teachers were a striking feature of the papers from the German and French schools. There was an air of genuineness about the papers that spoke even louder than teachers' statements."

THE EFFICIENT SECONDARY-SCHOOL TEACHER.

AN AMERICAN VIEW OF OUTSTANDING CHARACTERISTICS.

[Adapted from a recent article in the *School Review* (Chicago) by WALTER BALLOU JACOBS, of Brown University, Providence, R.I.]

1. RIPE SCHOLARSHIP.

First, the efficient teacher in a secondary school should be a man of broad learning. He should be respected for his learning, not only by his pupils, but by the community. Good text-books have improved teaching, but they have tended to demoralize the teacher. Too often the man is not to be found for the text-books that are piled upon his desk. Such a man is likely to infuse into his pupils respect for text-books rather than a love of learning. Learning comes to be an impersonal dead thing, rather than a warm breathing thing of grace and dignity. Too many of our teachers are good at school management merely. Their reputation rests upon that rather than upon the fullness of their learning. The externals of school-teaching are emphasized at the expense of the learning which is its heart and core.

There are a number of conditions which tend to discourage broad scholarship in our secondary-school teachers. Our school programmes are unstable. The enormous increase in pupils, the multiplicity of studies, the love of novelty, the lack of any recognized type which might act as a fly-wheel, make our programmes a seething pot. Teachers boil up one year with one group of studies, and must teach these. The next year they boil up with another group, and with these their lot is cast for another year. The most valuable teacher in a corps of teachers comes to

be the one who can teach anything—the jack of all trades who is good at none. Scholarship is a slow product. It needs time and quiet for growth. One cannot pull it up every year and transplant it to new soil. And, further, this confusion and lack of uniformity in the programmes of our schools discourage thorough preparation on the part of those who intend to become teachers. The most willing and the most competent are confused by the kaleidoscopic changes, in opportunities and requirements. Depth of scholarship seems less valued than superficial variety. This is unfortunate for the schools, dishonourable for the teaching guild, and suicidal to progress in scholarship. If scholarship is to be nurtured anywhere, it should be nurtured among teachers. It is the teachers' crown. No amount of sympathy, no amount of method, can compensate for its absence. Our education has too much a tendency to display itself in brick and mortar, in high-sounding names, in a multiplication of offices and official machinery. All this is very well in its place, but its place is strictly a place of subordination. How long will it be before we shall learn that, after all, that which is intangible is of more value than the tangible; that the unseen scholarship of the teacher is the gem for which brick and mortar—yes, marble and granite—are but a coarse and vulgar setting?

This attainment of ripe scholarship is something which the teacher must often work out alone. Our universities with their summer schools are doing something to foster it. The general public is giving it scant thought and small reward. To them a place is a place and a salary a salary. Executive ability seems far more valuable than learning or wisdom; but rest assured the time will come when this shall no longer be so. Our people will some time have done with the husks of externals and value the kernel more than the waving beard. But, if the people be blind, yet we the teachers must not see darkly. The teachers are the leaders of thought, and must not only satisfy the future, but make that future. We cannot be content with mere seemings or mere forms. In our hands has been placed the torch of learning. . . . The torch of learning must be held high by human hands, if it is to be seen of men.

To aid the scholarship of our teachers we must foster the large central high school, as opposed to the small and weak local school. Local pride that each little community may have a high school must not hide the advantages of larger and better equipped schools. High-school teachers must be sought for who are teachers of something, and not just teachers of anything. More uniform and better planned courses of study must be adopted. Wild experimentation must be bridled. Teachers must not be required to teach many subjects nor to change their subjects at the principal's whim. These are indeed externals, but they are like climate and atmosphere. They make it possible for the tender plant of scholarship to put forth buds, blossom, and bear fruit. The keeping of marks, the ringing of programme bells, even the correcting of papers, must not stand before the attainment of a rich and accurate scholarship.

2. PASSION TO MOULD MEN.

Learning is by no means the only characteristic of a good teacher. He must have a yearning for the souls of men; to mould them and shape them for good. This yearning may not necessarily be religious, but it must be missionary in its spirit. The true teacher is very close akin to the true missionary. . . . When teaching comes to be merely a means of getting a living, the trade by which one earns his daily bread, then come weary hours, then come stupid classes, then come weariness and ennui. . . . Let not a man think that because he loves learning he is called to teach. Let him also ask himself: "Do I love the souls of men and the souls of little children?" There was no error in those early colonial days when the preacher and the teacher stood side by side as men near of kin.

The roots of this spirit are found in the conception of education as a transforming and moulding. To educate is not simply to load with learning—the individual's self still remaining the same. To educate is to create: it is more than to convert. And it is not a creation which comes into birth at the fiat of might, but it is the product of the patient, fostering care of love and sympathy; of the brooding of the soul of the teacher over the soul of the pupil.

3. SYMPATHETIC POWER.

Every teacher who is an efficient teacher must be a patriot, but patriotism may not sleep from war to war. The patriotism of the teacher is the patriotism of peace rather than of war. The true patriot is the man who recognizes the needs of his people,

whatever those needs may be, and makes haste to serve them. Hence the teacher must not be a man apart from men, beetle-browed and stern; but he must feel the pulsing life of other men and of the community which he serves. Once education was an affair of the Church; then it came to be the work of the State. Now more and more it is coming to be the deed of society rather than the deed of the State, and Society merely uses the State to execute its will. The true teacher of to-day must be a student of social science, as the true teacher of the earlier days was a student of theology. He must study . . . the complex relations which make up our social and industrial life. He must in thought unravel thread from thread. He must see how to complete the unfinished pattern, and in his school with his scholars he must begin to weave them into what shall be a more beautiful pattern than the past has promised. This is patriotism in its noblest sense. The secondary-school teacher must be the uncompromising foe of selfish greed, whether it be the petty sin of the individual or whether as a vast impersonal corporation it grinds the poor in the dust; and he must be the friend and defender of charity and brotherly love. He must be the foe of careless and wasteful living, and he must be the friend of industry and high ideals. He must be the foe of a schooling which is not a true preparation for living, and he must be the friend and champion of a wise preparation for living.

The teacher stands face to face with the most ambitious problem the human race has ever set about to solve in a practical way—the uplifting and advancement of the race itself. The secondary-school teacher has the important place in this great undertaking—to him it belongs to select the future leaders and inspire them to leadership. In this work there is but one guide—the experience of the past. The teacher must make this experience his own. He must master the history of education, and the history of the onward progress of civilization itself. Else he is a blind leader of the blind. He must know the actual part which education has performed in race-advancement, that he may apply the great power of education wisely and rationally. It is true that the way which education has pursued in its onward march is strewn with stupid blunders and lost causes. These mistakes have been repeated again and again. It is one of the saddest facts of the history of education that even great teachers have been so completely ignorant of the past, and so unable to profit by the teachings of the past. In the future this must not be. . . .

The recent study of the meaning and promise of adolescence has opened another vast field of which the secondary teacher of the past has been in self-satisfied ignorance. The hopeful sign is that we are just knowing enough to know how totally ignorant we are. We are dealing with vast forces of human uplifting or degradation—forces which have their roots deep in the prehistoric history of the race. They are the very texture of human nature itself. They are like threads for long undershoot which at last appear above the surface and begin to trace a pattern, as if guided by an unseen hand. How we have been snarling these threads and cutting them, and how often we have been unable even to see them at all, or denied them when we did see them! As well may a physician be an efficient physician and be ignorant of physiology, as a secondary-school teacher be an efficient teacher and be ignorant of the problems of adolescence. This study of adolescence has upset, and will still more upset, the traditional psychology of the schools. . . .

Shall the secondary-school teacher, then, be a student of psychology! Yes and No! He shall know what other men have thought about the mind, its growth and development. He shall study the minds of his pupils. He shall know and wonder at the marvels of their unfolding; but he shall know them, not for the sake of the knowledge, but for the sake of the boy and for the sake of the girl. He shall study his pupils, not as things, as objects of scientific knowledge, but as beings like himself, as sons and daughters. He shall know his pupils rather sympathetically and instinctively than simply intellectually. . . . The greatest teachers have often lacked method, but they have never lacked heart. They have been *men*—men of sympathetic power, of magnetic influence—but never mere cold, intellectual methodizers.

4. MASTERY OF METHOD.

And yet method and professional skill have an important part in the efficient secondary-school teacher. He is not a mere hearer of lessons, nor yet a mere entertainer. He arouses the interest of his pupils and inspires their earnest effort. He is an inspirer and not a taskmaster. He is not ashamed to have a method and to employ it, but he is a master of method, and method is not a

master of him. The true teacher is an artist. His work delights him. This does not mean that he has not been a student of technique, but rather that he has spent weary hours in its mastery. This does not mean that he is ignorant of the history of his art, but rather that this history has fascinated and enchained him. The artist seeks in every field the means of improving his art, but he uses these with the hand of the master and not with the hand of the slave. Some men are brave because they are too ignorant to know fear. Some men think themselves wise because they never have studied the mysteries of the world. Ostrich-like they hide their heads in the sand. Some teachers think themselves above method because they have never studied method. The only way to be a master of method is to know it and rise upon it, as upon stepping-stones, to the master's seat. To be a student of method means that the teacher has reached the stage of self-consciousness. There are three stages by which the race of men grows. Lowest of all is the instinctive. Like blind men, they grope upward in the dark, not even knowing that it is upward. Then there is the imitative stage, where the good attracts by its goodness, and we imitate because it is good; but the ways and means are unknown to us. And last comes the self-conscious stage, where we construct our own ideals, and, through self-criticism, strive to attain them. So there are three grades of growth in the development of the teacher. First, there is the instinctive teacher, who teaches well because he was born with happy instincts; for the most part he does not know the why, and he surely does not know the how. Then there is the imitative teacher, who is fortunate if he has had good models and unchanged conditions. And last there is the teacher who consciously sets himself ideals and consciously seeks the means of realizing them, who is thoughtful when he succeeds and who learns by failure; whose difficulties are problems to be solved; whose problems are challenges to victory. The efficient teacher is wise, hopeful, courageous. He inquires often what are the characteristics of an efficient teacher, and seeks to realize them. The method of the secondary-school teacher must be a more skilful method than that of the grammar-school teacher. It must be more hidden, more self-effacing; hence it is more difficult to acquire, and needs more painstaking labour and penetrating comprehension.

LONDON SECONDARY SCHOOLS:

The report of the Education Committee of the London County Council on the provision of additional secondary schools (April 4) states that the secondary schools in the county, though for the most part good in quality, are admittedly far from being adequate in quantity, and the Committee are addressing themselves to the problem of what steps the Council should be advised to take on the subject. According to the best information in their possession, there are within the administrative county about eighty-eight secondary schools for boys or girls which are usually recognized as more or less of a public character. About half of these receive grants from the Board of Education and the Council. The Council's scholars have at present the choice of seventy-nine of them, but only about sixty contain any large number of these scholars. They appear to provide accommodation in the aggregate for about thirty thousand pupils. There are about two thousand of the Council's scholars in attendance. The school buildings—in most cases built or rebuilt within the last twenty years—stand almost invariably on freehold sites, which probably represent a capital value approaching a million sterling, and the total value of their property and endowments must exceed five millions sterling. The total revenue of these schools from all sources seems to reach £100,000 a year, of which £120,000 is derived from endowments—the bulk of which is enjoyed by the richer half of the schools, few of which receive grants, £220,000 from fees and miscellaneous items, £20,000 from Government grants, and £40,000 from the grants and payments for scholars made by the London County Council.

The Committee point out that it is difficult to estimate with any precision the secondary-school accommodation that ought to exist in London, there being no statistics available as to (a) the extent to which London boys and girls are sent to the numerous secondary day schools just over the border, or to boarding schools; (b) the extent to which London secondary schools are used by children belonging to other counties; and (c) the accommodation provided by private venture schools, of which there are many, but as to the efficiency of which little is known. But they compare the estimated aggregate accommodation in the eighty-

eight schools which are more or less public in character—namely, 30,000—with the figure of 12 per 1,000 of the population (which is that usually adopted as a normal standard), or, say, 55,000. They think there can be no doubt that a large extension of the supply of public secondary schools within the next few years (and by the Council) is inevitable. Many of the existing schools are habitually full, and some have regularly to refuse pupils (apart from the Council's scholars) every term. The Committee bring this matter forward at the present stage because of the necessity of making provision for the Council's scholars. In the last session 1,900 scholars were appointed, and for these (about 600 boys and 1,300 girls) suitable vacant places have been found, though with some difficulty in the case of girls in certain districts. In July next the Council will probably award 4,100 scholarships. Additional places in excess of those found last year will, therefore, have to be found in September or October next for about 650 boys and 1,550 girls.

The best estimate that the Committee can frame at the present moment indicates that there will probably be sufficient and suitable accommodation for all the boys so far as the requirements for the year 1905 are concerned, but that additional accommodation for girls should be provided by September or October to the extent of about 1,000 school places. The estimates in regard to the new scholarship system included the cost of maintenance of such new school places. The districts as to which the Committee are convinced that the need for accommodation is clear are the South-Eastern (notably Woolwich, but also Lewisham), the Western (notably Fulham), and the North-Eastern.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on April 15. Present: Dr. Wormell, President, in the Chair; Mr. Barlet, Mr. Baumann, Mr. Bidlake, Mr. E. A. Butler, Mr. J. L. Butler, Mr. Charles, Mr. Eve, Dr. Lawrence, Sir Philip Magnus, Dr. Moody, Mr. Morgan, Miss Punnett, Mr. Starbuck, Rev. J. Stewart, Mr. Storr, Rev. J. Twentyman, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

A communication was received from the Board of Education announcing that, by a Supplementary Order in Council, the term of office of the Teachers' Registration Council had been continued for one year beyond the three years specified in paragraph 2 of the Principal Order—viz., to March 6, 1906.

The report of the Finance Committee was adopted, and direction was given to remove from the Members' List the names of five members of the College, on account of non-payment of subscriptions.

The following persons were elected members of the College:—

- Mr. G. C. Bachelor, A.C.P., Royal Orphanage, Wolverhampton.
- Miss E. Coy, Lynton House School, Kingston Crescent, Portsmouth.
- Mr. L. R. M. Feltham, A.C.P., 9 Westgate Terrace, South Kensington, S.W.
- Miss D. Ibbett, L.C.P., Convent of the Ladies of Mary, Coloma, Croydon.
- Mr. F. W. Leicester-Hulk, A.C.P., Hartmann's Skole, Hvalstad, by Kristiania, Norway.
- Mr. J. Oliphant, M.A., 7 Broadhurst Gardens, South Hampstead, N.W.
- Mr. H. E. Richardson, B.A., B.Sc., A.C.P., 103 Pemberton Road, Harringay, N.
- Mr. S. J. Walters, A.C.P., 29 Park Road, Abingdon.

The following books had been presented to the Library since the last meeting of the Council:—

- By the AUTHOR.—De Saint Joseph's Cours Complet de Langue et de Littérature Française (4 vols.).
- By the AGENT-GENERAL FOR NEW SOUTH WALES.—Coghlan's Statistical Account of Australia and New Zealand, 1903-4.
- By ALLMAN & SON.—Belcher's Practical Electricity; Blonnet's Excerpts from French Authors; Christian and Pratt's Modern Geometry; Du Pré's Sketch of English Literature; Laurie's Text-Book of Elementary Botany; Laurie's Flowering Plants; Lee's English Grammar on Historical Principles; Reeve's Easy Excerpts from French Authors; Reid's Physical Geography; Sharp's 3,500 Examples in Arithmetic; Varley's Algebra; Varley's Graphs; Williams and Warwick's English History.
- By G. BELL & SONS.—The York Readers, Book II.; Pendlebury's Arithmetical Scheme B Test Cards, Standard II.
- By A. & C. BLACK.—Finnemore's Story of the English People.
- By the CLARENDON PRESS.—The Dream of the Rood; Jowett's Translation of Aristotle's Politics.
- By HACHETTE & Co.—The Public School French Grammar, Part II., Syntax.
- By MACMILLAN & Co.—Deighton's Shakespeare's Two Gentlemen of Verona.
- By J. MURRAY.—Tucker's History of England.
- By the GENERAL MEDICAL COUNCIL.—The Medical Register, 1905; The Dentists' Register, 1905.
- By the INSTITUTE OF CHARTERED ACCOUNTANTS—List of Members, &c., 1904.
- By the JOINT SCHOLARSHIPS BOARD.—Year-Book, 1904-5.
- Calendars of the Royal University of Ireland, 1905, and Supplement; University College of Wales, Aberystwyth, 1904-5; Victoria University of Manchester, 1904-5.

MESSRS. BELL'S MATHEMATICAL BOOKS.

Written on Modern Lines to meet the Requirements of the various Examining Bodies.

PENDLEBURY'S NEW SCHOOL ARITHMETIC.

With or without Answers, **4s. 6d.**; or, in Two Parts, **2s. 6d.** each. KEY to Part II., **8s. 6d.** net. *Shortly.*

. The New School Arithmetic is to a great extent a new book, and not merely a revision of the present work. It is based on the suggestions of the Mathematical Association, and special attention is given to the **Metric System, Graphical Methods, Approximations, &c.** **Algebraical symbols** are employed where convenient, and there are chapters on **Mensuration** and on **Logarithms**.

The original Arithmetic will also be kept in print, and will be revised and kept up to date with each new edition, as hitherto.

NEW SCHOOL EXAMPLES IN ARITHMETIC.

Extracted from the above. With or without Answers, **3s.**; or, in Two Parts, without Answers, **1s. 6d.** and **2s.**

BAKER AND BOURNE'S ELEMENTARY ALGEBRA.

Complete. With or without Answers, **4s. 6d.**

Or in Two Parts—PART I. Second Edition, Revised. To Quadratic Equations. **2s. 6d.**; or, with Answers, **3s.**

PART II. Including Logarithms (four-figure tables), Binomial Theorem, Exponential and Logarithmic Series, Interest, Undetermined Coefficients and Partial Fractions, &c. With or without Answers, **2s. 6d.**

TEACHER'S EDITION, with the Answers printed opposite to each Set of Examples. In Two Parts, **5s.** net each.

KEY to Part II., with numerous Graphical and other Figures, **5s.** net. KEY to Part I. *in the press.*

"Messrs. Baker and Bourne's excellent Algebra must give satisfaction wherever used."—*Nature*, March 30, 1905.

EXAMPLES IN ALGEBRA.

Extracted from the above. With or without Answers, **3s.** Or in Two Parts. Part I., **1s. 6d.**; or with Answers, **2s.**; Part II., with or without Answers, **2s.**

BAKER AND BOURNE'S ELEMENTARY GEOMETRY.

Complete Fourth Edition, Revised, **4s. 6d.**

Also in Parts:—Books I.-III., Seventh Edition, Revised, **2s. 6d.** Books I.-IV., Fourth Edition, **3s.**

Also published in the following forms:—Book I., **1s.** Books I. and II., **1s. 6d.** Books II. and III., **1s. 6d.** Books III. and IV., **1s. 6d.**

Books II.-IV., **2s. 6d.** Book IV., **1s.** Books IV. and V., **2s.** Book V., **1s. 6d.** Books IV.-VII., **3s.** Books V.-VII., **2s. 6d.**

Answers to Numerical and Mensuration Examples, **6d.** net. Complete KEY, **6s.** net.

BORCHARDT AND PERROTT'S NEW TRIGONOMETRY FOR SCHOOLS.

Crown 8vo, **4s. 6d.** Or in Two Parts, **2s. 6d.** each. KEY to Part I., **5s.** net. Complete KEY, *in the press.*

This Book is intended to supply the need felt for a Trigonometry based on *four-figure Logarithm Tables*, the authorities responsible for the various Cambridge Examinations, Army Entrance Examinations, &c., now dispensing with seven-figure Logarithms. The book lays stress on the more *practical parts* of the subject. *Squared paper* is freely made use of.

"The work is admirable for form use. It is indeed the best book on the subject at present in the market."—*Guardian*.

FOURTH EDITION. Crown 8vo. With or without Answers. **3s.**

EXAMPLES IN ALGEBRA.

By **C. O. TUCKEY, M.A.**, Assistant Master at Charterhouse; late Scholar of Trinity College, Cambridge.

"This is a very good collection, and may be recommended without reservation."—*Nature*.

"The selection of Examples and the order of the Chapters undoubtedly place the book far in advance of any at present existing."—*Guardian*.

Crown 8vo. With or without Answers. **1s. 6d.**

EXAMPLES IN PRACTICAL GEOMETRY AND MENSURATION.

By **J. W. MARSHALL, M.A.** and **C. O. TUCKEY, M.A.**, Assistant Masters at Charterhouse.

"One is almost inclined to think that a good collection of Examples like this is better to put into the hands of the class than any text-book. The good teacher will supply the text as it is wanted. Certainly if a boy can work through these Examples he should be well fitted to face any reasonable geometry examination, whether it be naval or entrance scholarship."—*Preparatory Schools Review*.

Crown 8vo, **4s. 6d.**

DIFFERENTIAL CALCULUS FOR BEGINNERS.

By **ALFRED LODGE, M.A.**, Mathematical Master at Charterhouse.

With an Introduction by **Sir OLIVER LODGE, D.Sc., F.R.S., LL.D.**, Principal of the University of Birmingham.

NOW READY. Crown 8vo, **2s. 6d.**

ELEMENTARY PRACTICAL MATHEMATICS.

By **H. A. STERN, M.A.**, late Open Mathematical Scholar of Corpus Christi College, Oxford, &c., Principal of Cedar Court Army College, Roehampton, and **W. H. TOPHAM**, Science Instructor at Cedar Court Army College and at Harrow School.

CONTENTS:—Introductory Remarks—Contracted Arithmetical Processes—Graphical Methods—Measurement of Length—Measurement of Angles—Measurement of Mass—Measurement of Area—Measurement of Volume—Measurement of Specific Gravity—Calibration of Tubes and Graduated Vessels—Appendix on the Construction of a Common Hydrometer—Index—Answers to Examples.

. This volume forms the first portion of a treatise on "The Elements of Practical Mathematics and Physical Measurement," by the same Authors, now in the press.

London: **GEORGE BELL & SONS**, Portugal Street, Lincoln's Inn, W.C.

MACMILLAN & CO.'S BOOKS

SUITABLE FOR THE OXFORD LOCAL EXAMINATIONS, 1906.

ENGLISH.

- Keary—The Heroes of Asgard.** 2s. 6d. [Preliminary.]
- Macaulay—Lays of Ancient Rome** (containing Horatius and Lake Regillus). With Introduction and Notes. By W. T. WEBB, M.A. 1s. 9d. [Preliminary.]
- **Horatius.** Separately. 6d. [Preliminary.]
- Scott—The Lay of the Last Minstrel.** With Introduction and Notes. By G. H. STUART, M.A., and E. H. ELLIOT, B.A. 2s. [Preliminary and Junior.]
- **The Lay of the Last Minstrel.** Edited by F. T. PALGRAVE. 1s. [Preliminary and Junior.]
- Shakespeare—Henry V.** With Introduction and Notes. By K. DEIGHTON, 1s. 9d. [Junior and Senior.]

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
 President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
 Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.
 Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.
 Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.** Annual Income, **£398,982.**
 Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.
 Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.
 Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.
 2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.
 3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.
 4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.
 5. Any Person holding any permanent appointment under the Society.
- Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.
 Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.
 The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (See Prospectus.)

COLLEGE OF PRECEPTORS' CERTIFICATE EXAMINATIONS.

Special Subjects, 1905.

- Caesar—Gallic War, Books I., IV., V.** By A. H. ALLCROFT, M.A. Oxon., and others. 1s. 6d. each. Vocabulary, 1s. each.
- Euripides—Hecuba.** By T. T. JEFFERY, M.A. Camb. 3s. 6d.
- Euripides—Medea.** By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon., Lecturer in Latin at University College, Dundee. 3s. 6d.
- Horace—Odes, Book III.** By A. H. ALLCROFT, M.A. Oxon., and B. J. HAYES, M.A. Camb. 1s. 6d. Vocabulary, 1s.
- Vergil—Aeneid, Books II., III.** By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Camb. and Lond. 1s. 6d. each. Vocabulary, 1s.
- Xenophon—Anabasis, Book I.** By A. H. ALLCROFT, M.A. Oxon., and F. L. D. RICHARDSON, B.A. Lond. 1s. 6d. Vocabulary, 1s.
- Shakespeare—Julius Caesar, Twelfth Night.** By W. J. ROLFE, D.Litt. 2s. each.

SCIENCE & ART EXAMINATIONS.

BOARD OF EDUCATION.

- I.—**Practical Plane and Solid Geometry, First Stage.** By G. F. BURN, A.M.Inst.M.E. 2s.
- III.—**Building Construction, First Stage.** By BRYSSON CUNNINGHAM, B.E., Assoc.M.Inst.C.E. 2s. 6d.
- V.—**Mathematics, First Stage.** Containing all the Algebra and Euclid required. Edited by Dr. WM. BRIGGS, M.A., F.R.A.S. 2s.
- VI.A.—**Mechanics (Solids), First Stage.** By F. ROSENBERG, M.A., B.Sc. *Fourth Edition.* 2s.
- VI.B.—**Mechanics of Fluids, First Stage.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A. 2s.
- VIII.—**Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc. 2s.
- IX.—**Magnetism and Electricity, First Stage.** By R. H. JUDE, M.A., D.Sc. *Revised Edition.* 2s.
- X.—**Inorganic Chemistry (Theoretical), First Stage.** By G. H. BAILEY, D.Sc., Ph.D. Heidelberg. 2s.
- XP.—**Inorganic Chemistry (Practical), First Stage.** By F. BEDDOW, Ph.D., D.Sc. *Second Edition.* 1s.
- XIP.—**Organic Chemistry, Practical.** By GEORGE GEORGE, F.C.S. 1s. 6d.
- XVII.—**Botany, First Stage.** By Dr. A. J. EWART. 2s.
- XX. } **Modern Navigation.** By WILLIAM HALL,
XXIB. } B.A., R.N. 6s. 6d.
- XXII.—**Steam, First Stage.** By J. W. HAYWARD, M.Sc. 2s.
- XXIII.—**Physiography, First Stage.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S. 2s.
- XXV.—**Hygiene, First Stage.** By R. A. LYSTER, M.B., B.Sc., D.P.H. 2s.

SCIENCE TEACHING

AND THE THEORY OF SCIENCE.

ADDRESS BY T. PERCY NUNN, M.A., B.Sc., LECTURER ON METHODS OF SCIENCE TEACHING IN THE LONDON DAY TRAINING COLLEGE.

At a joint meeting of the members of the College of Preceptors and the Assistant Masters' Association, held at the College of Preceptors on April 12, Mr. R. BLAIR, M.A., B.Sc., Chief Executive Officer of the L.C.C. Education Committee, in the chair, Mr. T. PERCY NUNN, M.A., B.Sc., read a paper on "Science Teaching and the Theory of Science." After preliminary remarks, Mr. Nunn proceeded as follows:—

THE BASIS OF FACT.

There is no doubt that every science rests upon a basis of certain fact. No one questions that statement as a principle, although in practice the distinction is not always made between this "solid ground of Nature" and the superstructures which man's toils and genius have erected upon it. It must be admitted that the distinction is sometimes a little difficult to maintain—especially since psychology has taught us that in a sense "the whole furniture of earth and choir of heaven" may be claimed as products of man's constructive activity. If you have penetrated no farther into psychology than, say, the opening pages of Mr. Stout's "Manual," you will be in no doubt as to what I mean. You will no longer be able—at least in your reflective moments—to regard the cigar which Mr. Stout places between your fingers with quite the same ingenuous objectivity as before. It is no longer simply an "object"—a bit of the flotsam and jetsam of time to be welcomed for the sake of the admirable "properties" and "qualities" with which beneficent Nature has endowed it. You can hardly avoid seeing the working of the mental machinery which with wonderful art-concealing art builds up the "cigar" from a mass of present and past "impressions of the senses." At such times you may be tempted to assert that in these impressions pouring in through the traditional Five Gateways of Knowledge—and the less obvious entrances which modern research has distinguished—we must recognize the real bed-rock of fact upon which science seeks to build.

PREJUDICES OF COMMON SENSE.

But this, I think you will find, is not the case. Science starts, at any rate, with the healthy and serviceable prejudices of common sense. It assumes that the world we live in consists for the most part of *things*, each tight in its own skin, secure in the possession of its properties and attributes, even if it is doomed for ever to waste them upon the desert air. The point of departure of the special line of inquiry which we call the science of heat is the fact that some of these things are hot, some cold, and that changes in this condition of hotness or coldness incessantly occur—the water in the pot on the fire getting hotter, the pudding on the plate colder, and so forth. Doubtless your class will start with what I have called the common-sense attitude towards these facts; that is, they will regard this hotness and coldness as states of the bodies of which contact or proximity simply makes us aware. The scientific treatment of the facts must begin with a disturbance of the *naïveté* of this attitude. You make a boy place his hand for some time in a bowl of hot water, while another places his hand in cold water. Then you mix the water in a third bowl, and invite statements about the condition of the mixture from the two boys. "It is cold water," says the one; "no—hot water," maintains the other. This contradiction—instances of which can, of course, be multiplied quite easily—leads to important consequences. It leads the children to see that their verdicts on the subject of the hotness and coldness depend partly upon subjective or personal conditions which vary from one person to another, and in the same person at different times. But cross-examination will reveal that it has not destroyed their conviction of the existence of an *objective*

condition—an actual state of the body itself which is the same for everybody, and is, after all, the most important condition, for in its absence there would be no motive for saying anything about the hotness or coldness of the body at all. Recognizing clearly the distinction between this state and their own varying verdicts about it, your children are ready to admit the propriety of distinguishing it by a new name—*temperature*. Thus the temperature of a body is conceived as that “real,” or objective, state of the body which our verdicts as to its hotness and coldness aim at expressing, but only with imperfect success. But, unless we are resigned to despair of ever knowing anything certain about this state, we shall look about for some index of it that shall be free from the contradictions of our senses.

INDEX OF OBJECTIVE CONDITION.

To satisfy this demand you will, of course, introduce the thermometer. You will need no hints from me on that topic, but it will be interesting to see precisely how the thermometer does meet the demand for a trustworthy index of that objective condition which your pupils now think of as the temperature of the body. You plunge your first rude thermometer—a flask of coloured water, perhaps, provided with a long stem—into a beaker of water, which you cause to become hotter and hotter. As it does so, the liquid in the thermometer is observed to expand. Questions addressed to your class will now elicit a result which you will doubtless anticipate, although I think it is possible that you have never quite appreciated its significance. The children will admit without any hesitation and without any evidence that to every position of the rising liquid in the stem there corresponds one precise temperature of the water in the beaker. Let us be sure that we understand the exact meaning of this admission. Mark the height of the liquid in the stem and repeat the heating of the water on another occasion. When the liquid once more reaches the old mark, your class will affirm with confidence that, whether it feels as hot or not, the water is *really* just as hot as it was on the first occasion. . . .

THE POSTULATE OF OBJECTIVITY.

In our hypothetical first lesson on heat two indubitable postulates have come to light. The first showed itself when the children maintained that, although their several verdicts about the hotness or coldness of water were not concordant, yet there was one real objective state or temperature of the body, which their perceptions aimed at, so to speak, but did not, or did not all of them, hit. This postulate, this demand for a state of everything that shall be independent of each of us and the same for all, has not, I think, received sufficiently definite and widespread recognition. We are thus free to give it a name, and I suggest the name Postulate of Objectivity. Examination will reveal this postulate at the base of all scientific work. It is well known that separate measurements of a physical quantity, whether made by one observer or by many, are practically never identical. When mechanical difficulties have been overcome, and instrumental devices of the highest perfection provided, the measurements—whether they be of the time when a star passes the cross wire of the telescope, of the weight of a cubic centimetre of water, of the determination of an electrical resistance, or of any other quantity—always show the same ineradicable inconsistencies, yet it is always assumed that the quantity in question has a definite objective value, and we boldly seek by means of our theory of errors to determine what that value is.

We shall find the real significance of this postulate, I think, in some such considerations as the following. So long as we sit in our arm-chairs, comfortably aloof from the stress of life, we can afford to recognize that the ancient thesis of Protagoras: “Man is the measure of all things”—even if we remember that man here means “individual man”—is one of those “arguments that admit of no answer.” When, however, we take our place side by side with our fellows in the world of action we recognize that the other half of Hume’s remark applies to it also. It “carries no conviction.” Social co-operation would be out of the question if each man had his own world and insisted upon sticking to it regardless of its discrepancies from the worlds of others. Common action is possible only if we can grow up in the secure belief that in our several lives we deal with identical things in a common world. So clearly is this recognized that we do not scruple to remove from society, as “mentally deranged,” those who are unfortunate enough not to be able to bring their individual worlds into practical agreement with the worlds of others. In the case of those of us who are deemed sane the divergencies from the assumed objective standard are only great

enough to remind our friends that our souls are still our own. Will you not agree with me that the recognition of the connexion between the Postulate of Objectivity and the fellowship which affords to human life at once its indispensable basis and its highest ideals will bring the science teacher appreciably nearer to the humanistic point of view?

THE POSTULATE OF UNIFORMITY.

The second of our two postulates was reached when the children maintained that the reappearance of the liquid at the same height in the stem of the thermometer meant the recurrence of the same temperature in the water. Here they were applying, instinctively and unconsciously, the well known principle of the uniformity of Nature. The events of the world do not come to us at haphazard, like gifts from Pandora’s box; they arrive in accordance with unbroken customs of sequence and coexistence. John Stuart Mill and the logicians of his school got sadly befogged in their theories of science by regarding this principle as a great induction—that is, a conclusion drawn from experience. Its true significance for the logician and its interest for the teacher become visible only when it is regarded as a postulate, as a demand of the human spirit anterior to its experience, an innate prejudice in favour of experience of a certain type.

Perhaps the most convincing argument that the principle of uniformity is a postulate is to be derived from the study of its aberrations. In a striking passage in “The Golden Bough” Dr. Frazer shows that the fantastic “magic” of savage races consists of a logically connected body of beliefs that only differ from our science by the unfortunate accident of being based upon erroneous premisses. It is founded, as science is, upon the conviction that events follow one another according to unbroken rules of sequence: the only difference is that the magician has attempted to settle out of his own head what the sequences ought to be, instead of patiently interrogating Nature upon the subject. Popular literature has made us all familiar with instances of this science-gone-wrong. There is the device practised in all ages and in all climes for compassing the destruction of your foe by making a waxen image of him and submitting it to a slow roasting or other “humorous but lingering” treatment. If we may trust to a passage in Emily Brontë’s “Wuthering Heights,” the method was still practised on the Yorkshire moors early in the last century. Another well known instance is the belief in the connexion between the “ebbing” of men’s lives and the turn of the tide. Aristotle mentions it; Mistress Quickly testifies to it in her account of the death of Sir John Falstaff—“’a parted even just between twelve and one, even at the turning o’ the tide”; and no lover of Dickens will forget how “it being low water,” the willin’ soul of Barkis “went out with the tide.” In all such cases we have, as I have said, simply the aberrations of that instinctive demand for uniformity in the world’s happenings which, when properly directed, generates science.

Here again it is not difficult to find an interpretation of our postulate. . . . It will be sufficient to draw the conclusion that the Postulate of Uniformity has primarily the same reference to the needs of individual life that the Postulate of Objectivity has to the needs of social life. It is, I repeat, an optimistic assumption expressive of the fact that what we call growth and development—nay, life and experience itself—are dependent upon our ability to find in the material environment upon which in the last resort we are dependent “the army of unalterable law.”

I venture to repeat my suggestion that the teacher who looks upon this Postulate of Uniformity not as a mere property of dead matter, but as a deeply significant activity of the living souls whose development he is privileged to guide, is at a point of view which is not far from the humanistic.

THE DANGEROUS NOTION OF “CAUSE.”

The next step that will interest us will be taken when the class comes to recognize that, if a hot body is placed in contact with, or in the neighbourhood of, colder bodies, its temperature falls and their temperature rises, until a sensibly identical temperature exists in them all. How shall we advise the teacher to view these facts? Shall he say that one body has got colder and the others hotter *because* heat has left the former and entered the latter? I submit that he will never correctly understand the nature of the subject-matter of his teaching—and therefore, we must fear, never teach it to the best advantage—unless he is able to see that the truth (in Carlyle’s phrase) is “quite curiously the reverse” of this. Because the one body has cooled and the others have become hotter we almost inevitably conceive that something has passed from the former to the latter. I say “almost inevitably”

because there are persons who have emancipated themselves from the necessity. Such persons have taught themselves to do altogether without that dangerous and slippery notion of *cause*. To them the hot body always does get colder and the cold body hotter, and there is an end of the matter. And, after all, these facts are the only facts accessible to observation—that is, the only facts that can be *verified*. No one has ever pretended to observe heat apart from the phenomena of heating and cooling. What then is the significance of this apparently superfluous notion? Our answer to this question will bring us to what I take to be the central position of the theory of science.

THE SIGNIFICANCE OF FACTS.

Facts which I have earlier in this paper described as facts for the common-sense attitude—such facts as that this body A is cooling, that body B is getting warmer—have been called by a recent French writer *des faits bruts*—brute facts, plain facts, facts that as mere facts must be accepted by every one in the same sense. Adopting M. Le Roy's term, we may say that the immediate object of science is to make these brute facts intelligible, to give them meaning. The signification of that word "meaning" is somewhat elusive, but I think you will grant that it always implies a system of units of some sort in relation. Consider the meaning of a word—for example, the word "button." Standing alone, it cannot be said, strictly, to have any meaning at all. It may be either a verb or a noun. When I say: "Pray you, undo this button," the fact that the word is now brought into relation with other words in a definite system gives it a meaning, although the meaning is incomplete: I may mean a coat button or a door button. The doubt can, of course, be resolved only by the context—that is, by the position of the sentence in a still wider system. In this way the request "Pray you, undo this button" may have all manner of meanings, from the trivial one which a common domestic context would give it to the profound and pathetic significance it has on the dying lips of King Lear.

Consider next a human unit—for example, a sergeant-major. No one who confined his observations strictly to the performances of that officer could say that he understood them. They would only be intelligible, they could have *meaning* only, to one who considered the sergeant-major in relation with the other units which compose the company, the battalion, the regiment, the army—the significance of the sergeant-major being more completely apprehended the wider the system of which he is conceived as a part.

Turn for a moment, now, to another system of living units—for example, a colony of ants. How does our attitude towards one of the individuals of this system differ from our attitude towards the sergeant-major? How can the single ant become intelligible to us? The answers to these questions may be given together. The sergeant-major and the other units of the army are bone of our bone, flesh of our flesh. We can understand their relations, so to speak, from the inside; we can always metaphorically, and sometimes literally, put ourselves in their places. But with ants this is not the case. We can interpret their performances only by their analogy with those of human beings. Externally their relations to one another resemble ours, and we complete the external likeness by assuming an internal likeness, the extent of which it is impossible for us to verify. We can never know with certainty how far the movements of ants are guided by communication with one another in the same sense as the movements of soldiers are guided by the orders of their superiors.

Finally, let us return to our material units—the hot body A getting cooler, the cool bodies B, C, D, &c., getting warmer. We are now in a position to see that to make their performances intelligible we must conceive them as a system—that is, a larger unity composed of smaller units in relation. The obvious difference between this case and the others which we have studied lies in the fact that here we are quite unable to conceive, even by analogy, what the relations are like from within. Indeed, it would seem that the view that the relations of material things have an internal aspect analogous to the conscious relations which we have with one another can never be more than an attractive speculation. In the crude form called "animism" it plays a conspicuous part in the attempts of savage races to understand the connexions of phenomena, but science has long ago abandoned the use of it—at any rate, professedly.

How, then, can we make the relations of material units intelligible to ourselves? No answer universally applicable can, I think, be given: it seems largely a question of individual temperament and training. In the case of most people, however—and probably in the case of all children—the answer is, by

means of material analogies. The opposite and simultaneous changes in the temperature of the bodies we are considering easily suggest a loss on the one hand, a gain on the other. The changes would become intelligible *if* something were conceived as passing from one to the others. Something accordingly *is* conceived as passing, and that something is *heat*. Heat, then, is not a real thing existing in matter and transferred from one piece of it to another, regardless of our interest in the transaction: it is a unifying conception which we import into the real phenomena with the object of making them intelligible. In the terminology of MM. Le Roy and Poincaré, it is not a "brute fact": it is a "scientific fact."

FURTHER ILLUSTRATIONS.

Has this analysis failed to convince you? Then I would ask for your attention to some further considerations. If it is natural to regard a hot body as emitting heat, it is equally natural to regard a cold body as emitting *cold*. Uninstructed thought and common language employ both ideas according to the occasion, and early science endeavoured to make the action of cold bodies intelligible by the conception of "spicula frigoris," minute icy darts concealed among the particles of the cold emitting body. Boyle, again, in his tracts on cold discusses in a sceptical spirit the view that there is a "primum frigidum," an original cold substance which makes things cold, just as the admixture of heat or "fire" makes them hot. Why do we no longer—at any rate, when we are talking scientifically—thus think of "cold" as a positive entity coordinate with "heat"? Obviously because the phenomena are intelligible without it: we can give a perfectly satisfactory meaning to a cold body by thinking of it as one which suffers from a defect of heat. Why, then, do we adopt heat, not cold, as our "scientific fact," our unifying conception? Simply, I reply, because the accidents of our environment have always made hot things, such as fire and the sun, more impressive and more relevant to our daily needs than cold ones. A race of intelligent beings who inhabited a perpetually frozen desert where they get nothing to drink but liquid air would doubtless interpret all phenomena of temperature change by the aid of the conception of cold.

If you are still loth to admit that heat is not a fact coordinate with the brute facts of hotness and coldness, cooling and heating, but merely an idea by the use of which we seek to make those facts intelligible, let me remind you how often in the history of science, while the brute facts to be understood—that is, to be systematized—have for the greater part remained the same, the "scientific fact" invented to make them intelligible has almost entirely changed its form. Take as an example the electric current—surely a solid enough fact; for millions have been invested in it, and many of us keep an anxious eye on a meter which records our consumption of it so remorselessly. I trust that none of you will abandon an intention to go home by the Twopenny Tube if I suggest that the electric current upon which you are relying is merely a conception invented to make your arrival at Shepherd's Bush intelligible. In view of the remarkable changes which the conception has undergone, I feel bound to maintain that this is the correct way to regard it. In the epoch-making work of Ohm, and to this day in common thought, the electric current *is* a current, an actual flow of the "electric fluid" closely analogous to the flow of water in a pipe. But when theories of electrolysis had to be devised, with their double processions of electrified ions, it became necessary to think of the "current" as being really two simultaneous movements in opposite directions. Later there came a time—about the date of the publication of Sir Oliver Lodge's "Modern Views"—when interest was largely concentrated on the phenomena of the ether. At this time it may be said that physicists were most interested in a conception of the current which regarded it as occurring everywhere *except* in the wire. Lastly, the wonderful new conception of "electrons," by the aid of which Prof. J. J. Thomson and others are revolutionizing our most fundamental ideas about matter—to say nothing of electricity—have probably caused the events going on in the wire once more to occupy the focus of the physicist's attention when he thinks of the electric current. Meanwhile the plain man has stuck, and will continue to stick, to his notion of the "flow" through the wire, which is quite enough to unify the scanty stock of relevant "brute facts" which lie within his ken.

JOSEPH BLACK'S CONCEPTION OF HEAT.

The same point might have been illustrated from the history of heat; but it must suffice to note that the teacher will probably find it best to employ the notion of heat which, in the hands of that

great man Joseph Black, led to all the most important advances in the science down to the era which we in England associate so firmly with the name of Joule. Black, as is well known, thought of heat as a substance whose particles surrounded and entered into relations with the particles of the hot body, much as water particles surround and enter into relations with the particles of salt which they hold in solution. If you read the wise and cautious passage in which Black declines to advance any hypothesis as to the precise connexion between the heat and the particles of the hot body, on the ground that there are no phenomena to be rendered intelligible by such a hypothesis, you will feel, I think, that he would have subscribed to, and actually came very near to expressing, a view of the import of his conception scarcely to be distinguished from the view which I have been maintaining. And here I venture to anticipate an important question—the question as to how far the teacher should inoculate his children with these subversive ideas—ideas which to many persons seem to threaten the very inviolability of the Equator. I reply that the difficulty does not exist. Children in whom our remarkable system of education has not yet destroyed the native confidence in their power to draw from clear premisses the legitimate conclusion adopt easily a point of view which to them is subversive of nothing. Guided by a teacher who constantly bears in mind the real position of affairs, who constantly impresses upon his pupils that the facts, the “brute facts,” are the *data*, and a means of regarding them as an intelligible system the *quaesitum*, the class enters readily and with enthusiasm into the game. Particularly is this the case if the teacher is able to recreate something of the historical atmosphere in which the problems before his class were first wrestled with and solved. Then it is that the children feel their solidarity with the great “ministers and interpreters of Nature”; then it is that they feel, dimly perhaps, but really and justifiably, that they, too, are playing a small part in the essentially human and social task of reducing the everlasting sequences of events to intelligibility.

The secret of the success of Black's conception lies in its power to suggest a method of measuring heat. A pint pot and a quart pot, each full of water, are placed in succession over a steady gas burner. I am, of course, modernizing the unessential details of the problem. In three minutes the temperature in the quart pot rises 5°, in the pint pot practically 10°. These are the “brute facts.” If we think of heat as a substance emitted by the hot body, we can hardly avoid supposing that practically equal amounts of it are given by the gas flame in the same time to each of the pots. The water in these pots must then be thought of as undergoing a process of “filling” with heat, just as the vessels themselves were filled with water, the rise of temperature being regarded, of course, as analogous to the change of level produced by pouring water into the vessels. Finally, it is only necessary to think of the two masses of water as analogous to vessels one of which has a bottom containing twice as many square inches of area as the other to see that the same quantity of heat would make the temperature “level” in the vessel of larger “capacity” rise only half as much as the temperature level in the other. However, we extend the number of the original observations—the “brute facts”—we shall always find that they become intelligible if we conceive the amount of heat received by any quantity of water to be measured by the product of the mass of the water and its rise in temperature. For example, if, under certain conditions, 10 lb. of water rise 6° in temperature, then, under the same conditions, 12 lb. would rise 5°, 15 lb. 4°, 30 lb. 2°, and so on, the products 10×6, 12×5, 15×4, &c., always giving the same result—60—which is taken as the quantity of heat.

RESULTS SO FAR.

Once more let us be sure that we appreciate the real significance of our achievement. As before, we must maintain that this significance is missed if we suppose that we have discovered the correct way in which to measure the amount of heat that actually enters a quantity of water. Rather must we say that, having conceived heat as a substance, we have been able to hit upon a conception of its behaviour when imparted to different quantities of water which brings a number of otherwise independent “brute facts” into intelligible relations. We have not found that the quantity of heat actually imparted to the water is measured by the product of the mass and the rise of temperature: we have decided that this product shall be regarded as the quantity of heat, because by so doing we bring order and intelligibility into an indefinite number of facts of observation.

TWO DIFFICULTIES.

Our conception of heat as a substance thus enriched and strengthened has now to encounter two difficulties. The first is the fact which so astonished Black's immediate predecessors and contemporaries—the fact that, if we substitute for the quart of water a pint of mercury, or, better still, a quantity of mercury equal in weight to a pint of water, the temperature of the metal will rise very much more quickly than the temperature of the water. Are we thus to abandon the conception of quantity of heat which we have just adopted? By no means, for by conceiving equal masses of different substances to have each a special property towards heat—a specific “capacity” for heat—we can not only save the situation, but also bring an indefinite number of new facts into our intelligible system.

The second obstacle is a much more serious one. Up to Black's time it was supposed that when water is heated a continuous rise of temperature takes place, punctuated—not broken—at the boiling point by the passage of the water into steam. Water could not exist above that temperature, but was simply replaced by steam—just as there are houses all along the Edgware Road till we are four miles from the Marble Arch, when they are suddenly replaced by open fields. It is chiefly owing to Black's own researches that the inadequacy of this statement of the facts was revealed. He showed clearly that the matter was much more complicated; that the change from water to steam was, in fact, attended by no rise of temperature at all, but—in spite of this fact—by a very large disappearance of heat. Surely this is a “brute fact” that can hardly be made intelligible upon the assumption that heat is a substance? Well, we know that Black did attempt to make it intelligible by the bold conception with which, under the name of “latent heat,” we are all familiar—so familiar, perhaps, that we do not always recognize its audacity. The particles of the substance heat enter into a special combination with the particles of the substance water, which, instead of expressing itself in a further rise of temperature, results in the appearance of a new substance—steam.

These two cases illustrate the application of a maxim that is to be found universally latent in scientific method—the maxim that a conception which has proved capable of rendering a number of facts intelligible is not to be hastily abandoned because new facts come to light which are at first refractory. Thus, when the known *data* of the solar system, interpreted by the aid of Newton's hypothesis of universal gravitation, failed to make the observed movements of the planet Uranus intelligible, Adams and Leverrier boldly assumed that there were other determining *data* up to that time unknown, and were rewarded by the discovery of Neptune. More often, however, we endeavour by expansion or modification of the original conception to make it capable of interpreting the new facts. Thus, when we mix hot water and cold mercury together, the weight of the mercury multiplied by its rise of temperature is about thirty times as great as the weight of the water multiplied by its fall in temperature. If the latter product is to be regarded as the measure of a definite quantity of a substance that passes from the water to the mercury, it is obvious that the former product cannot also be its measure. To obtain a consistent measure—that is, to obtain the same number throughout—the product in the case of mercury must always be multiplied by the factor $\frac{1}{30}$. This factor, which we call the “specific heat” of mercury, is simply an expression of our determination that the phenomena of heating and cooling of mercury and water when brought into contact shall be regarded as due to the passage of a definite quantity of a definite substance—heat—from one to the other. The conception of “latent heat” is another expression, more striking because more violent, of the same determination not to abandon a useful unifying conception except upon absolute compulsion.

Of course, such compulsion may arise. Facts may come to light which obstinately refuse to be unified by the original conception. Then the old friend must regretfully be abandoned and intelligibility sought by the aid of another. It is a matter of familiar knowledge that the time came when the conception of heat as a substance broke down. It was unable, without preposterous modifications which destroyed its plausibility, to render intelligible the phenomena which we speak of as the conversion of heat into work, and the new and essentially modern conception of heat as a form of “energy” took its place.

SUMMARY RETROSPECT.

At this point we may close our analysis and attempt an estimate of the results of our discussion. I must admit that

that discussion has failed if you will not allow me to draw at least one conclusion. Science is not a process of passive reception; it is a process of active construction. It is essentially not an attempt to find out the real facts of the universe, but an attempt to make those facts intelligible. Moreover, science rests upon two principles which must be regarded not as conclusions drawn from experience, but as postulates, as demands for certain forms of experience, as assumptions that these forms characterize the actual warp and woof of Nature. These are the postulates of Objectivity and Uniformity—the postulate that there is an objective world common to all and the same for all, and the postulate that the contents of this world are connected with one another in accordance with definite and unbroken rules of sequence and coexistence.

OBJECTIONS ANTICIPATED.

NOW I can well believe that the arguments by which I have attempted to establish these views have caused you a good deal of irritation—irritation of which I should probably feel the effects in the discussion which is to follow if I did not anticipate and endeavour to remove it. You might well urge, and urge with indignation, that to regard the objectivity and uniformity of Nature—to say nothing of the other “truths of science”—not as facts of Nature herself, but as inventions of the human soul, is an outrageous paradox. The magnificent successes of science—its convincing unravelling of the past, its extraordinary command of the performances of dead matter, its astonishing and never-failing predictions of the future—surely (you might say) only to mention these is to produce overwhelming evidence that the objectivity and uniformity of Nature, so far from being assumptions, are the most solid and fundamental of facts. And (you might continue) as for what I have been pleased to call the unifying conceptions of science, if founded upon a sufficiently wide basis of observations, surely they are as objectively valid as the observations themselves, for they are capable of predicting an endless succession of facts for subsequent verification. Did I not myself remind you that when Newton's law appeared unable to explain the facts of the planetary system the watcher of the skies appealed to Newton's law itself to account for the defect—and the new planet Neptune swam into his ken?

To this hypothetical attack I should reply that it would, indeed, be paradoxical to maintain that the principles of objectivity and uniformity and the conceptions of science are *only* assumptions and inventions of the investigator. It would be impossible to deny that Nature gives us evidence of her objectivity and uniformity at every moment and at every turn. It would be equally impossible to deny that widely successful conceptions, like that of gravitation or the conservation of energy, in some way represent the real relations between the elements of the universe. But you must remember that I am counsel for the defendant, and in that capacity may be pardoned for a little special pleading. My client—the science teacher—is in danger of exclusion from the ranks of reputable schoolmasters on the ground that he is not a humanist. It has, therefore, been one of my aims to show that the fabric of science which the science teacher seeks to recreate in the minds of his pupils is essentially and primarily a human construction, built up in answer to demands based upon the necessities of individual and social life. To urge that science is more than this does not destroy the argument that it is primarily this, that, if our pupils did not bring to their investigations a *demand* for objectivity and uniformity, they would not discover these properties in Nature any more than a dog who had the most extensive opportunities of acquaintance with the perceivable facts of London life would discover the existence and functions of the London County Council. We may perhaps best represent the true state of the case by borrowing Lotze's comparison of ideas with tools which must fit the hand and also fit the thing, but are themselves obviously shaped by the hand, not by the thing.

And it may be worth while to point out that the comparison applies equally to the ideas which are the stock in trade of the humanist. After all the poet starts with the same data as the scientist—the “brute facts” of the world of perception—and, like the scientist, constructs from these data in response to an internal demand of his nature—the one aiming at an *æsthetic* construction, the other at an *intelligible* construction. Moreover, in the case of the poet no less than in the case of the scientist, the construction could not be made if the conditions of its possibility did not in some form lie in the “brute facts” themselves.

PRACTICAL CONCLUSIONS.

If I cannot get you to admit that my attempt to whitenwash the

science teacher into a passable humanist has been successful, I may perhaps hope that the considerations that have failed to effect that object have yet been seen to have an important bearing upon the question of the method in which he should exercise his deplorable, but perhaps necessary, functions. If anything has emerged clearly from our discussion, it is that the fabric of science is built up of facts of widely different orders—the “brute facts” which form the foundation of the structure, and are for all time unalterably the same, though as generations pass more and more of them are accumulated; and the “scientific facts” which are of a secondary character, owing their existence and position absolutely to the former, and subject, like all the other human institutions, to the law of growth and decay. The practical corollary is obvious. Sound science teaching *must* be based upon a genuine accumulation of primary facts by the pupil, if the secondary facts whose only function is to render the others intelligible are to be appreciated by him at their proper value. It is because the investigation method naturally fulfils the condition which criticism seems to prescribe that it occupies, in my opinion, a position which is theoretically unassailable. Considerations upon the lines that we have followed this evening are also, I believe, necessary to the perfection of the practice of the method and are capable of removing misconceptions of its nature from which many of its most zealous friends are not altogether free.

To indicate these at this hour would be to exceed my mandate palpably, and I hasten to conclude my argument. I will do so with a thought that should serve to bring humanists and—well, science teachers—nearer to mutual comprehension and unity. We have found that to make any piece of experience intelligible we must view it in relation with others, and that only as the context grows does the meaning of the original experience become revealed. There is no limit to the application of this principle. Ultimately neither the kind of experience in which the humanist is chiefly interested, nor the kind which specially draws the scientist, is intelligible unless complemented by the other. To understand any part of life, we must, to use Matthew Arnold's phrases, not only “see it steadily,” but also “see it as a whole.” The thought is familiar to philosophy, and by no means unknown to literature, but I rejoice to think that it has obtained perhaps its most perfect expression from the lips of a great artist who had not failed also to grasp much of the true significance of science:

Flower in the crannied wall
 . . . if I could understand
 What you are, root and all, and all in all,
 I should know what God and man is.

The CHAIRMAN, in opening the discussion, said that science teaching was one of the most powerful factors in the moral training of children, as it afforded unrivalled opportunities for the cultivation of truthfulness. Science teaching in schools had hitherto followed too closely the lines that were suitable for languages and mathematics.

Mr. BROCK thought that science could hardly be regarded as a humanistic study. It was true, as the lecturer had pointed out, that much of the investigation of science depended upon the action of the mind, but it must be remembered that it depended on uniformities within the human mind, and that humanistic study was concerned rather with the differences between individual minds.

Mr. SINCLAIR thought it was useless to attempt to teach the theory of science to young children, and that their attention should be confined to practical work.

Mr. PHILPOTTS thought that science possessed great advantages over other subjects, as it afforded many more opportunities for training the pupil in thinking in a logical way.

Mr. PIGGOTT considered that the lecture was a valuable contribution to the discussion of the lines on which science should be taught in schools. The lecturer had made it quite clear that the collection of data by observation and experiment was not the sum and substance of science, and that it was of paramount importance that the pupil should be led to discover some sort of principle which would bring facts into relation with one another and make them intelligible. He did not think that a comparison could usefully be instituted between the values of science and the humanities, as the objects of the two studies were different.

Mr. NUNN having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

THE hundred-and-fifth anniversary of the death of the poet William Cowper was celebrated at East Dereham on April 25, when the Cowper Society held a meeting, and a memorial window was unveiled in the church where his remains rest.

OPEN COURT.

*They say . . .**Quhat say thay?—Lat thame say!*

IRISH EDUCATION.

AN INDEPENDENT EDUCATIONAL VIEW.

[From the "Statist."]

THERE is one portion of the Prime Minister's otherwise excellent speech upon the Irish education question last week in which he did not preserve the candour which characterized all other parts of it. We refer to the passage in which he says it is natural for Englishmen and Scotchmen to resent the tone in which Irishmen make the demand for funds to establish university education, because Parliament has never founded universities either in England or Scotland any more than in Ireland. Now, we venture to say that this is a most unfortunate line of argument, quite unworthy of Mr. Balfour. In the first place, the question is not one respecting the proper distribution of the funds of the United Kingdom between the three kingdoms constituting it; neither is it whether Ireland is asking as a right and in an objectionable tone what England and Scotland do not ask and never have obtained; it is whether Ireland is so circumstanced that she urgently needs a good university system and is herself unable to provide it. In the second place, the circumstances of Ireland are altogether different from those of either England or Scotland. During the long wars of conquest in Ireland we deliberately destroyed the educational provision which Irish Catholics had made for themselves. We also confiscated practically all the property of the Catholics. And, finally, we imposed a system of penal laws which prevented the Catholics from acquiring the wealth that would enable them to build up a new educational system.

Nothing of the kind has been done by any one part of the United Kingdom to either England or Scotland. England and Scotland have old universities and schools which have come down with a great prestige from the past. Ireland has nothing of the kind except the Protestant University and Protestant schools, which have been steadfastly rejected by the Catholics. No doubt English and Scotch education needs much improvement. No doubt, also, much more money is required to make the universities, the colleges, and the schools thoroughly efficient. But, when all that is admitted, it still is true that there is a very large fund devoted to education in Great Britain, while there is practically no provision made for the education of Irish Catholics except the grants to the Queen's Colleges and the Royal University. We venture to think, then, that the Prime Minister would have done much better if he had extended his rebuke to English and Scotch members as well as to Irish, and reminded all that the question before the House was not one for the display of national passions, but rather one for calm and careful consideration. However, the result of Ireland's unfortunate history is that the Catholic population is without any proper system of education in any grade. It is, moreover, exceedingly poor, far poorer than the Protestant population of Ireland, and still poorer than the populations of England and Scotland. Therefore, it clearly is not in a position to supply itself with the educational machinery it so sorely needs. There are, moreover, no great Irish Catholic capitalists who could out of their own superfluity found a university. And the number of rich men among the Catholics is too small to make it probable that the deficiencies of Catholic education in Ireland could be made good by their co-operation. The final result is that, if Ireland is to be raised out of the slough of despondency in which she is sunk, it must be done by Parliamentary action.

In these days of keen competition in education, as well as in armaments and commerce, the nation which does not take pains to develop all its faculties is sure to go down. Even in Great Britain the system of education is extremely bad. It is antiquated, and it needs much larger funds than are now devoted to it. Even without funds, however, much could be done by enlightened reform. But in Ireland the whole system of education needs to be remodelled from the very bottom. And, as we have been pointing out above, it needs to be done, moreover, by means of State funds. What is called the National system, as if by irony, is controlled by a number of Commissioners, individually distinguished, no doubt, but actually without experience in education. They are totally independent of the Irish people. And, strange to say, they are largely independent even of the Government. Whereas elected bodies control elementary education in Great Britain, there is no elective element in the Irish elementary system. The secondary

system is just as bad. And the university system is equally faulty. The University of Dublin was founded in the reign of Elizabeth to anglicize and protestantize the country. Practically it has been shunned ever since by the Catholics. A few Catholics during the past century have been educated in it. But to all intents and purposes it is as useless to the Catholic majority of Ireland as if it existed in another planet. The Royal University is a mere examining body, not a university in any true sense of the word. And the Queen's Colleges suffer, firstly, from the non-existence throughout Ireland of adequate preparatory schools; and, secondly, from the distrust of Catholic parents, who fear for the religion of their children because the colleges are non-sectarian.

The upshot of all this is that there is not in all Ireland a good school or a university to which the Catholic laity will go in any numbers. Is it necessary to say that, as a consequence, Ireland is far behind England and Scotland; that every class in the country is less well educated than the corresponding class in other advanced countries, and as a result is less efficient in every department of life? Look at the countries which are really making progress—such, for example, as the United States and Germany. See the immense numbers of educational institutions of every kind that are springing up day by day at the other side of the Atlantic. Note the immense sums that are being given for the furtherance of education in the United States by the Federal Government, by the State Governments, by the municipalities, and by private munificence. And for a whole century Germany has not been less active in the same field. Can any one doubt that it is to this spread of enlightened and scientific education that the progress of the United States and Germany is mainly due? On the other hand, can there be a question in the mind of any unprejudiced man that the want of a sound system of education in Ireland is one of the main reasons of its continued wretchedness?

We all profess to be most anxious to do everything for the benefit of Ireland which she would do for herself if she had control of her own affairs. Yet this university question has been before us for fully a century, and it is apparently no nearer a solution now than it was at the beginning. The younger Pitt intended to deal with it, just as he intended to deal with the penal laws. But he failed to do so. Mr. Gladstone actually brought in a Bill a generation ago, but was unable to make it law. Mr. Balfour tells us that he has long been persuaded of the justice of the Irish case, and yet he has been unable to convert either the country, or Parliament, or the Cabinet of which he is the chief. Doggedly the majority of both great parties refuse to yield an inch. And then they complain because Irishmen clamour for Home Rule. As Mr. Balfour pointed out last week, the reason is that Englishmen and Scotchmen look on the question as one of religion, not as one of education. They fear, if they were to found a Catholic university, that they would be strengthening the priests; and, rather than risk doing that, they condemn the whole Catholic population of Ireland to remain in ignorance and poverty. If they would only rid themselves of bigotry and approach the question from the purely educational point of view, they would see at once the reasonableness of the Catholic demand that they should be given a place for the education of their children the spirit of which should not be hostile to their religion. And they would recognize, further, that Ireland, being as poor as she is, has not the means of founding a university for herself, and, consequently, there is a good case for doing for her what has never needed to be done either for England or for Scotland.

In these days, when we are all Imperialists, we profess to be very eager to strengthen the Empire in every way possible. Is it not clear that one of the surest ways of strengthening the Empire is to increase the well-being of the United Kingdom—not of this part or that part only of the United Kingdom, but of every part? If, for example, we had a larger population in Ireland, and a population as devoted to the Empire as, let us say, that of Scotland, is it not manifest that the Empire would be materially strengthened; especially as Ireland is, and long will be, an agricultural country; and her young men, therefore, would be calculated to make better soldiers than youths drawn from the slums of our great towns? We do not ourselves believe that it is impossible to make the majority of Englishmen and Scotchmen see all this. But we fear that Mr. Balfour, like Mr. Gladstone before him, has gone the wrong way to work. He has tried to act through his own party alone. Is it not worth while to invite the co-operation of the Opposition, and to arrive at a settlement by an appeal to the reasonable men of all parties?

REVIEWS.

A FAMOUS ATTIC ORATOR.

The Speeches of Isaeus. With Critical and Explanatory Notes. By William Wyse, M.A., Late Fellow and Lecturer of Trinity College, Cambridge, and sometime Professor of Greek in University College, London. (18s. net. Cambridge University Press.)

Mr. Wyse's work does very high credit to himself, to his University, and to the University Press. The undertaking, most laborious and difficult as it has been, stands completed with remarkable success. Mr. Wyse thus expresses the scope of his intentions:

The leading purpose of this edition is to show by analysis of the extant speeches that ancient scholars had a juster appreciation of the orator's art than is shown by modern writers on Greek Law, for some of whom his unsupported statements appear to carry the authority of decisions of a Supreme Court, and that to extract truth from the arguments of an advocate bent on winning a verdict from an ignorant tribunal is a more delicate operation than many people seem to suppose. At the same time, though the matter has claimed more of my attention than the manner, I have done my best to meet fairly all textual and grammatical difficulties.

The chances of being misled both as to fact and as to law by an adroit and experienced advocate, not only by what he says and how he says it, but still more by what he takes care not to say and by what he more or less suggests, require a constant critical alertness on the part of the hearer or the commentator. The nature of the difficulties may be appreciated from our own jury cases (in spite of the presence of a trained judge), or, better still, from our political discussions on party platforms or even in Parliament. The position is familiar enough to students of Cicero's judicial speeches, and Isaeus is more intractable than Cicero: "Isaeus is *capable de tout*" (page 204). One must also stand clear of modern ideas and take up, as far as may be, the Athenian attitude within the Athenian atmosphere of the times; and then "our knowledge of Athenian law is exceedingly scanty" (page 634). Such a work as this requires not only mature scholarship, but also technical knowledge of law (comparative, and not Greek only) and adequate practical experience of juries and other public bodies exercising functions of a judicial character. Mr. Wyse, we infer, is not armed altogether *cap-à-pie*: he does not always handle conflicting opinion with the decisive force of an experienced judge, though he shows much of the acuteness of a practised counsel. At the same time the marshalling of opinion on important points is always eminently useful, and the examination of the orator's argument is extremely able.

If the manner has claimed less of Mr. Wyse's attention than the matter, this is probably because he is better equipped for textual and grammatical criticism. The critical introduction (some sixty pages) exhibits a vigorous handling of the manuscripts on all points of real importance, and, together with the grammatical element of the 550 pages of notes, implies quite as appalling a labour as the criticism of the matter of the orations. Apart from the immediate purpose of the introduction, the discussion offers a most instructive illustration of manuscript criticism. The grammatical notes invite little remark; they are, of course, conspicuously competent, and by no means overdone, except sometimes perhaps on the right side of fullness of illustration. We are inclined to remark on a peculiar case in Or. I., § 44. Isaeus says: *εἰ τοίνυν συνέβη Κλεωνόμῳ μὲν ζῆν, ἐξερημωθῆναι δὲ τὸν ἡμέτερον οἶκον ἢ τὸν τούτων, σκέψασθε ποτέρων ἐκείνος ἐγίγνετο κληρονόμος.* The stumbling-block is *ἐγίγνετο*. At first blush it seems that the sense requires not "became," but "would become" or "would have become"; and so Naber proposes to add *ἂν* (which is indeed liable enough to be dropped out by copyists), and Mr. Wyse, in order to avoid this emendation, discusses through a whole page Isaeus's use of *κληρονόμος* and the applications of the imperfect tense. Naber's proposal is obviously out of the question: it would involve the similar insertion of *ἂν* twice in § 45. The solution rests on no question of usage, whether of *κληρονόμος* or of the imperfect, but on the mental attitude of the orator. This is what Buermann means ("Hermes" 19, page 334): "Es ist in diesen und ähnlichen Fällen gar nicht das Verhältniss der Irrealität bezeichnet, die Handlung wird vielmehr als wirklich in der Vergangenheit gesetzt." Mr. Wyse quotes Buermann, but does not indicate that he grasps his meaning—a meaning that would be instantly taken by a lawyer familiar with practice. This misapprehension

seems also responsible for Mr. Wyse's expectation of *εἰσὶ* (§ 45, 5) instead of *ἦσαν*, and perhaps for his "improvement" of § 46, 2, by insertion of *ἂν* (again in face of Buermann). The whole of this discussion emphasizes in the strongest manner the danger of even very deliberate emendation. Such occasional points of difference are inevitable in the treatment of a dozen quirky orations of an astute practitioner, and count but as dust in the balance in view of the ability and scholarship that Mr. Wyse has placed at the service of students of Isaeus. The volume is printed and got up in admirable style.

RELIGIOUS WARS OF MODERN EUROPE.

"The Cambridge Modern History." Vol. III.: *The Wars of Religion.* (16s. net. Cambridge University Press.)

With the great religious schism of the Reformation, whether as origin or as pretext, are to be connected, in the main, the complicated series of conflicts forming the central and substantial subject of the present volume. But there was also a varied secular leaven of great importance mixed up with the religious incitements, though not always openly acknowledged: "the cause of the restoration of Catholic unity in the West was, in the minds of both the supporters and the opponents of that cause, inextricably interwoven with the purposes of dynastic ambition, and powerfully affected by influences traceable to the rapid advance of the monarchical principle and to the gradual growth of the conception of the modern national State." The intermixture and conflict of interests, religious and intellectual, dynastic and national, markedly intensify the difficulties of clear presentment without overlapping. Repetition, indeed, is inevitable, but the effect is minimized by difference of aspect. Generally speaking, the materials are disposed in reasonably adequate co-ordination, so as to establish a fairly good unity in the volume; but, after all, it is the unity of the particular episodes that is practically the more important. Besides the wars, there is a considerable variety of supplementary matters filling out the history of the period. The high character of the work, historical and literary, is fully maintained.

First come the wars of religion in France, eight in a row, scattered over some thirty years, from the Massacre of Vassy in 1562 to the absolution of Henry IV. in 1593. These "furnish the most complete instance of the constant intersection of native and foreign influence"—foreign influence literally from all sides. In a late chapter the French story is carried forward to the death of Henry IV.—one of the most discriminating studies in the volume. But beside the first chapter is placed an admirable complimentary sketch of French humanism, with particular notices of some of the more prominent and distinctive scholars, followed by a tolerably full and very appreciative account of Montaigne. Next Poland, then the foremost of the Slavonic States, the second Catholic Power in Europe, and the one permanent barrier against the rising tide of Ottoman aggression—an extremely fresh and interesting section. The Catholic reaction is described and the Valois and Báthory elections, the latter especially dramatic. How many of us could tell off-hand how Stephen Báthory "approved himself one of the foremost statesmen and soldiers of his age"? The Ottoman danger pressed on Hungary and Venice, and was urged by Solyman "the Magnificent" (as he was miscalled in the West) and by his degenerate successor, Selim II. A Hungarian episode of the time is embalmed in Körner's "Zriny," and a Venetian is adumbrated in "Othello." On the side of the Empire the narrative opens with a broad and acute survey of the conditions surrounding the Religious Peace of Augsburg, and traces developments, first through the reigns of Ferdinand I. and Maximilian II., and at a later point through the reign of Rudolf II. The internal and external difficulties of the Empire, under continuously increasing misrule, are compendiously and effectively set forth. While the Turk was a constant thorn in the Imperial flesh, the storm was gathering blacker and blacker in the Netherlands. The Revolt in the Netherlands is forcibly narrated in two chapters down to the assassination of William the Silent, and continued in a later chapter to the death of Maurice—a narrative that should attract readers to the larger histories of that remarkable struggle of fanaticism and heroism. From time to time England has been putting a finger in the Continental pie, and now she comes to the foreground in successive chapters on Mary Stewart (Queen of Scots), the Elizabethan Naval War with Spain, and the last years of Elizabeth, with a comprehensive but somewhat compressed sketch of the Elizabethan Age of English Literature; the history

of Britain under James I., and of Ireland to the Settlement of Ulster, being treated in later chapters. Italy is represented by the minor, yet not unimportant, fortunes of Tuscany and Savoy, and by a very appreciative sketch of Rome under Sixtus V., supplemented by a brief account of the end of the Italian Renaissance. Spain, which has necessarily obtruded itself throughout the preceding events, is described, both politics and literature, under Philip II. and Philip III. The concluding chapter, most appropriately and very effectively, sketches political thought in the sixteenth century. The contributors, though not all their names are known to fame, are all manifestly well grounded in their subjects. The bibliography usefully extends to a hundred pages; the chronological table gives a large and convenient selection of the more important events; and the index is judiciously full, running to thirty-four double-column pages.

SHAKESPEARE AND SHAKESPEARE'S STAGE.

- (1) *Von den ältesten Drucken der Dramen Shakespeares, und dem Einflusse, den die damaligen Londoner Theater und ihre Einrichtungen auf diese Dramen ausgeübt haben. Eine Untersuchung von literarischen und dramaturgischen Standpunkte.* Von Robert Prölss. (Mk. 2,25. Leipzig: F. A. Berger.)
 - (2) "The Arden Shakespeare."—*Titus Andronicus.* Edited by H. Bellyse Baildon. (3s. 6d. Methuen.)
- (1) The author has already written the history of German dramatic art with broad outlook and with acknowledged ability, and offered to his countrymen a couple of volumes of shrewd "Erläuterungen" to eight of the principal plays of Shakespeare. The present considerable *brochure* is intended to clear away difficulties of approach to the actual conditions of the composition and production of Shakespeare's plays. The poet wrote, not for the printing-press and readers, but for the stage and audiences; and so Herr Prölss makes inquiry "in betreff der Einrichtungen, Hilfsmittel, Konventionen, und Gepflogenheiten der Bühnen, für die Shakespeare seine Stücke geschrieben, und über die Art und den Umfang, in denen er sie darin zur Anwendung gebracht hat," as well as into the contents and history of the various editions of the plays, separate and collected, and into the pertinent literature. Incidentally, too, he draws inferences as to particular points in Shakespeare's career.
- A discussion of the separate editions, or Quartos, leads Herr Prölss to the conclusion that not one of them was in any respect illegitimate, or based on surreptitious transcripts or on imperfect copies taken down during representation in the theatre, but that every one of them (like the plays of the First Folio) rests upon the stage texts. A sketch of the public and private houses is interesting; but the inference that the contrast between the two classes of representations exercised "einen bedeutenden Einfluss auf Shakespeares dramatische Entwicklung, auf seine Kompositions- und Darstellungsweise," if not far-fetched, at least seems much overdriven. The argument from necessity, and from the inconceivable, for throwing back the poet's dramatic career beyond 1591 seems somewhat unsafe, and the speculation on title-pages that leads up to the opinion that Shakespeare was a member of the Earl of Pembroke's company before he entered the Lord Chamberlain's is not weighed against the most obvious difficulties. There is much patient work and acute suggestion in the latter and larger half of the pamphlet, which deals in liberal detail with the stage arrangements and appurtenances and their bearings upon the poet's activities, together with the stage directions of the various editions. The work shows wide familiarity with the literature of the subject, keen and independent thought, much ingenuity, and immense diligence. Though perhaps primarily addressed to specialists, it will be most interesting to general readers that are willing to pursue the particular aspects of Shakespearean study into argumentative details.
- (2) Mr. Baildon's introduction runs to seventy-six pages—room and verge enough to discuss pretty fully even the complicated and difficult questions raised by "Titus Andronicus." In fact, the author is very discursive, and little concerned to control an eager pen in point of quantity, or of quality either; but the reader will soon yield him forgiveness for divagations on the Baconian theory, the Higher Criticism, &c., by reason of his breezy vigour and sturdy good sense. He does not fix the date of the play with closer precision than "between 1589 and 1593": he might have profitably discussed the points, not at more length, but more fully and definitely. We think he is right in refusing to accept Mr. Crawford's argument from parallels with

Peele's "Honour of the Garter." As to Shakespeare's authorship he sensibly stands by the testimony of Francis Meres, and rejects with entirely justifiable scorn the "private author" of Ravenscroft and everything dependent thereon. Mr. Sidney Lee, accepting Ravenscroft's assertion, says the tragedy "contains powerful lines and situations, but is far too repulsive in plot and treatment, and too ostentatious in classical allusions, to take rank with Shakespeare's acknowledged work." Such an argument from the supposed squeamishness of Shakespeare and his artistic abhorrence of the gaudiness of cheap classical tags is amazingly unhistorical, and Mr. Baildon does good service in repudiating it in any and every form. We have no doubt whatever that Mr. Baildon's position is right: he holds that the play is "essentially Shakespearean in its general outlines and conception"—"not that every word and line, not even every scene, is the *original* work of Shakespeare, but that his genius and character is impressed in immature but unmistakable manner on the drama as a whole." The critical examination of the play—the analysis of the various characters, versification tests, &c.—is extremely suggestive, and in many points bears a value beyond the particular drama. The notes are not quite so technical as usual, but they are useful for interpretation. A very interesting and able addition to the series.

FIRST STEPS.

The Preparation of the Child for Science. By M. E. Boole. (Clarendon Press.)

Lofty ideals may be difficult to realize; to attain to them may even prove to be impossible; yet it is invaluable to recognize a high standard of excellence and to strive to approach it. This is the prevailing impression created by the interesting pages of Miss Boole's latest work, where, as the preface tells us, we find not the ideas of the authoress alone, but those of a whole group of psychologists. The purpose of the volume is very clearly indicated by its title, and the writer discusses at considerable length the mental environment which forms for the child of tender years a fitting preparation for the subsequent study of science, and which tends to establish an intellectual attitude favourable to personal discovery and the extension by the mature mind of the field of scientific knowledge. It must be clearly understood that a distinction is to be made between a training whose ultimate object is the endowment with ability to grasp scientific truth, and to prosecute scientific research, and one whose aim is rather to produce students likely to be successful under examination. Success in the examination room depends largely on acquiring a sufficient knowledge of cut and dried facts, whilst for the equipment of the scientific discoverer such accurate information, however important, is, after all, secondary to an intimate acquaintance with scientific method: what is chiefly desirable is the wisdom resulting from digested knowledge. Again, we are told that the fitting attitude of the teacher of scientific method is essentially different from that to be maintained by one superintending the mastering of the grammar, the quantitative pronunciation, and the vocabulary of a dead language. In the latter case every detail is fixed, and no mistake can be tolerated for a moment, to the benefit of the pupil. In the former, the desideratum is the power of finally abstracting the truth from a series of partial impressions, neither of which conveys the whole truth, but each of which may bear a certain relation to it, and the competent teacher refrains from correcting as soon as formed each imperfect impression, taking care, however, to prevent persistence in what constitutes at any particular stage the equivalent of a grammatical blunder.

The writer is aware, and we fully endorse her opinion, that under the existing conditions of society and education—and, indeed, under the conditions likely to subsist anywhere but in an ideal community—very serious difficulties present themselves when we attempt to secure for the average child the desired training in scientific method. How are we to ensure that mothers and nursery governesses and junior teachers as a body may possess the knowledge both of science and of scientific method which is essential if they are to give the children the advantages of what becomes in effect a kindergarten college of science. Miss Boole's delightful ideal involves the study of the natural bias of the infant mind, the selection of the playthings and pets which are best adapted to its development, the encouragement of original observation supplemented by instruction at the right time and in the right place, and the exercise of judicious supervision, so that the young mind may be induced to bring to bear on any point that amount of concentration which is requisite for evolving the truth from any particular series of varied and im-

perfect impressions. Yet, unattainable though the ideal training may be in general, Miss Boole has done well in formulating its principles. Her small volume lies within easy reach of the mothers and teachers of the rising generation and will probably be an inspiration and a guide to many who are striving to learn how best to train the little ones. It may well be that some of the great scientists of the future will owe their power in part at least to these pages.

GENERAL NOTICES.

CLASSICS.

The Euthydemus of Plato. By Edwin Hamilton Gifford, D.D. (3s. 6d. Clarendon Press.)

A very agreeable and stimulating edition for university and higher form work. Dr. Gifford forms his text on Schanz's critical apparatus and Prof. Burnet's revision of it, "except as to a few readings for which I have carefully inspected the phototype of the Codex Clarkianus in the Bodleian Library." This is good enough for a school edition, but scarcely good enough for Dr. Gifford's scholarship. We are inclined to think that questions of text, where so numerous as here, should be discussed in a separate section and not included in the notes. The introduction is full and markedly careful, and interesting as well as instructive; and the notes offer a gymnastic rather than an encouragement to idleness. The print is so good that we must draw attention to "Burnet" (Notes, page 13) and the abbreviation of Dionysodorus into "Diodorus" at least three times in the "Introduction."

The controversy over Greek has induced Prof. John E. B. Mayor to reprint his charming *Preface to First Greek Reader* (1s. net., Macmillan & Bowes). Charming; but only broadly pertinent to the conflict. Nobody questions the intrinsic value of Greek, or of the more excellent ways of teaching Greek.

Mr. T. Werner Laurie publishes a "popular edition" of "*The Works of Virgil* translated into English prose by C. Davidson, with copious Notes and an Introduction," as the first volume of a "Classical Library" series (2s. 6d. net, with photogravure frontispiece).

MATHEMATICS.

An Introduction to the Study of Geometry. By A. J. Pressland, M.A., F.R.S.E. (1s. Rivingtons.)

The work provides an interesting and valuable preliminary course in geometry. As an inspector of schools in the Canton of Zürich, the author has had opportunities of noting the success which there attends the preparatory teaching of the subject. Much that is introduced into his work owes its origin to the experience thus gained. The instruction is adapted to the needs of the absolute beginner, who commences by learning how to fashion out of ruled paper his own graduated ruler sufficiently serviceable for rough constructions and calculations. He is taught to use it to great advantage, and he acquires, entirely as the result of experiment, familiarity with a considerable number of fundamental geometrical facts. In due course more accurate measurements are demanded and the necessary instruments are called into requisition. By the time the thirty pages of text have been fully considered, the average pupil is in possession of an excellent groundwork of geometrical knowledge calculated to lessen materially the difficulty of the formal study for which the course is intended to be a preparation.

Solutions of Examples in Hall's Graphical Algebra. By H. S. Hall, M.A., assisted by H. C. Beaven, B.A. (Macmillan.)

The first edition of "Graphical Algebra," which was published in pamphlet form, and which served the purpose of bringing up to date Hall and Knight's excellent work on elementary algebra, was rapidly exhausted, and a new revised and enlarged edition was issued. The present volume forms a very valuable and useful key to the latter little book, and in its preparation Mr. Hall has been ably assisted by Mr. H. C. Beaven, of Clifton College. The deserved popularity of Mr. Hall's long series of text-books will insure for the fresh publication a ready welcome among teachers. A word of praise is merited by the diagrams. These have been very clearly reproduced, and naturally constitute an important feature in a work of this kind.

Beginner's Trigonometry. By M. S. David, B.A. (2s. Black.)

A most useful book for beginners, which fully maintains the standard of the author's previous work on elementary algebra. The writer possesses just the qualifications required for the production of elementary text-books on mathematics—a thorough knowledge of the subject, the power of clearly imparting what he wishes to explain, and an evident appreciation of the necessity for rigid accuracy within the limits he prescribes to himself.

MODERN LANGUAGES.

A Note-Book of French Literature. By Philip C. Yorke, M.A. (Oxon.), L.-ès-L. (Paris). Vol. II.: *Nineteenth Century.* (4s. 6d. net. Blackie.)

There is no need to apologize for giving a volume of some five hundred pages to an account of the literature of France during last century, with brief extracts in illustration. Mr. Yorke first deals with Romanticism and Naturalism, from Joseph de Maistre to Vigny; next he interposes a concise Note on the Great Thinkers—eight of them only; and then proceeds from Victor Hugo down to Maeterlinck and Rostand. The critical accounts of the writers are well informed, reasonably discriminating, and compactly expressed; the full lists of their works will be a great convenience; and the illustrative extracts are judiciously chosen and fresh. Allowances must be made for the prohibitions of copyright, but altogether the volume furnishes a very fair representation; and any one that reads it with diligence will have a good knowledge of the subject. The type, if small in the extracts, is very clear and agreeable.

Pascual Lopez. Par Doña Emilia Pardo Bazán. Edited by Prof. W. L. Knapp, Ph.D., LL.D. (3s. 6d. Ginn.)

Madame Pardo Bazán, we learn, "is a great favourite at the Spanish Court and a particular friend of the Queen-mother." At any rate, she is a tolerably prolific and vivacious writer. The principal charm of this story—an "autobiografía de un estudiante de medicina"—lies in the dialogue. The notes are not very numerous, but they are all to the point; and the vocabulary, which is supplementary to the dictionary (and, accordingly, apt to be aggravating), is full and helpful. The volume is a very welcome addition to the student's library of Spanish. Both print and get-up are very agreeable.

The Albright Publishing Company of New York have issued an "abridged edition" of Max Straube's *Manual of German Etymology in its relation to English.* The object of the book is "to facilitate the study of the German language by enabling the student to memorize German vocables with comparative ease." The method is "by inquiring into the affinities of the word and by finding its kindred in our vernacular." To a certain extent the principle works usefully, but in general it is a strangely roundabout process. We should rather accept the volume simply as a dictionary of etymological affinities—an interesting, instructive, and often curious book of reference. We daresay it is open to cavil on particular philological points, like all its kindred; but, on a pretty wide test, we should judge it to be generally sound. Pupils should have access to it in the school library.

ENGLISH LITERATURE.

Classical Echoes in Tennyson. By Wilfred P. Mustard, Ph.D., Professor of Latin in Haverford College. (\$1.25; say 5s. Macmillan.)

The third volume of the series of "Columbia University Studies in English." The subject has been worked out considerably on this side of the water by various editors of Tennyson and by Prof. Churton Collins in his "Illustrations of Tennyson"; and the literary interest is always fresh and keen. Prof. Mustard traces parallels from Homer down to St. Augustine in ten chapters of systematic investigation, with an appendix of three classes of minor matters. Incidentally, too, he makes many references to collateral illustrations from other writers. He is careful to steer a middle course, neither "hunting after remote resemblances and far-fetched analogies" nor "understating the great poet's debt to the great classical poets whom he studied all his life long." The parallels are diligently collected and pointedly presented, but there is not much in the way of argumentative commentary. However, each reader can use his own judgment: "de gustibus non est disputandum." It is a scholarly and judicious work.

Messrs. Methuen & Co. have started a new series of large interest—"Methuen's Standard Library," edited by Mr. Sidney Lee. The object is to furnish sound and complete texts of the classics of all nations in an agreeable form at a very low price. "All the great masters of Poetry, Drama, Fiction, History, Biography, and Philosophy will be represented." Each volume will contain from 100 to 300 pages (crown 8vo), except that very long books will be issued as double numbers. The price is remarkably modest: 6d. a volume in tasteful paper cover, or 1s. net in cloth (with ornamental back); double volumes, 1s. net paper, 1s. 6d. net cloth. We have (1) Vol. I. of *Shakespeare's Works* (to be completed in 10 volumes), (2) *The Pilgrim's Progress* (both parts), and (3) *The Meditations of Marcus Aurelius*, translated by R. Graves, M.A.—all in attractive binding; and (4) *Sense and Sensibility*, Vol. I. of Jane Austen's novels (to be completed in 5 volumes), (5) Vol. I. of *Gibbon's Decline and Fall of the Roman Empire* (double volume, pages xxviii+442; to be completed in 7 double volumes), the notes revised by Prof. Bury, and (6) Vol. I. of the English Works of Lord Bacon, containing the *Essays* and *The New Atlantis*—all in nice paper covers. The volumes are printed in clear type on good paper, and are very agreeably got up. The series is bound to give a powerful impulse to the popularization of the best literature, and does very high credit to the enterprise of the publishers.

Mr. Heinemann's "Favourite Classics" series passes from Shakespeare to Tennyson. There are seven volumes of Tennyson

(6d. net each): (1) *Early Poems*, (2) *The Princess*, (3) *English Idyls*, (4) *Maud*, (5) *In Memoriam*, (6) and (7) *Idyls of the King*. Each of the first two volumes has a portrait of Tennyson as frontispiece; the first is dated 1838 and the second is from the well known Mayall photograph. The first volume of the *Idyls of the King* has a portrait of Tennyson from a photograph (by F. Hollyer) of the picture by G. F. Watts. And each of the other volumes has a characteristic illustration as frontispiece, all admirably reproduced. Mr. Arthur Waugh furnishes well considered introductions.

Messrs. Blackie have just added to their excellent "Library of Great Novelists" *The Mill on the Floss*, with six illustrations by T. H. Robinson, and *Tom Burke of "Ours"*, with six illustrations by William Rainey, R.I. (2s. 6d. each). The paper and type are good, and the get-up is tasteful.—They offer also an attractive edition of *The Swiss Family Robinson*, with four good illustrations by A. A. Dixon (2s.).

New volumes in the reissue of "Cassell's National Library" are (1) Shakespeare's *King Richard II.* and (2) Burke's *Thoughts on the Present Discontents* and four *Speeches* (in one volume), both edited by Prof. Henry Morley, LL.D. They will be handy for the Certificate Examination, 1905, and will be welcomed generally. Each has a portrait of the author as frontispiece.

SUPPLEMENTARY ENGLISH READERS.

"Supplementary" readers are numerous and varied. Messrs. Blackie offer "Little Tales for Little Folk" (1d. each): (1) *Fred's Run*, (2) *Patty's Walk*, (3) *Ella's Fall*, (4) *Norah's Dark Look*, and (5) *Honest Dolly*—all nicely printed and got up, and liberally illustrated. They belong to the infant stage.—From the junior classes upwards *Birmingham and the Midlands* (8d.), in "The English Counties Series," will be welcome, not merely as pleasant geography, but for its comprehensive interest. The illustrations and maps are very good.—Of higher scope are some new volumes of "Blackie's English School Texts" (8d. each): (1) *Tales from the Decameron* (Boccaccio), (2) *The Praise of Folly* (Erasmus), (3) *Lamb's Schooldays, and other Essays*, and (4) *Macaulay's First Chapter*—good and varied reading in agreeable get-up.—Messrs. Nelson also commence an attractive series of "Junior Supplementary Readers," liberally illustrated (partly in colour) and strongly bound: (1) *Stories from Grimm, Books I. and II.* (6d. each); (2) *All the Year Round in our Village, Book I.* (January to June), *Book II.* (July to December) (6d. each).—Fresh additions to "McDougall's Supplementary Series" (2d. each) are (1) No. 3, *Robinson Crusoe* (abridged); (2) No. 4, four of Lamb's *Tales from Shakespeare* ("Lear," "Macbeth," "Hamlet," "As you like it"); and (3) No. 5, *A Tale of Two Cities* (abridged).—"Chambers's Supplementary Readers" include (1) *From Fancy's Realm*, two stories by Mrs. Alfred Baldwin (5d.); (2) *Gallant Deeds*, five stories by G. A. Henty (1s.); and (3) *Children of the Empire, Part I.*, three sketches (Indian, Canadian, Australian), by John Finemore (1s.)—all illustrated and well got up.

Messrs. Jack offer a pleasant variety for younger readers. There is *Rip Van Winkle* (3d.), with short notes and four full-page illustrations in colour; *Rab and his Friends* and *Our Dogs* together (3d.), with short notes and the original illustrations by Sir George Harvey and Sir Noel Paton; *The Book of Notable Days*, by H. R. Beasley (8d.), with eight full-page illustrations, brilliantly coloured—a patriotic reader; and *Lamb's Tales from Shakespeare*—first and second series (four tales each; 6d. each). In all these little volumes the type is clear and strong, and the binding is for wear.

HISTORY.

The History of France. By Arthur Hassall, M.A. 1s. net. Dent ("The Temple Primers").

The necessary compression is materially relieved by judicious selection of points, lucid disposition of the matter, and plain businesslike narrative. One would like some expansion of the later history—if need be, at the expense of the earlier. But the work is a very able and useful summary.

Messrs. George Bell & Sons have placed in "The York Library" *A History of the Intellectual Development of Europe*, by John William Draper, LL.D., formerly Professor in the University of New York, in two handy and tasteful volumes (2s. net each). In this new and cheap form, the able and instructive work should reach a very wide circle of fresh students.

Colonies and Colonial Federations, by the late E. J. Payne, is substantially a new book, replacing the eighty pages devoted to the subject in the volume on "Colonies and Dependencies" in "The English Citizen" series (3s. 6d., Macmillan). This is quite right, in view of the extraordinary development of colonial questions since the publication of the original book. The treatment is successively geographical, historical, economic, and political. It is very instructive, and it ought to be widely read and studied, although on many points in the last three phases it requires to be read critically. There are four excellent and useful maps, and a welcome statistical table of the British Empire, 1902-03. It is to be hoped that the other half of the original volume will be similarly brought down to date, for events have been proceeding as fast in India as in the Colonies.

Messrs. Cassell publish at an opportune season two handy little volumes on the two empires in conflict in the Far East: (1) *Russia, the Land of the Great White Czar*, by E. C. Phillips (Mrs. Horace B. Locker), and (2) *Japan, the Eastern Wonderland*, by D. C. Angus (2s. 6d. each). Each volume is written in the form of a simple story, which gradually unfolds the life, manners, customs, and history of the particular country and people; and each has about fifty full-page illustrations. The books give a good general notion of the two peoples and their countries, and they are very nicely got up.—The same publishers also issue *Canada, Britain's Largest Colony*, by A. L. Haydon, in "Our Empire Series" (2s. 6d.). The history, the natural features, the industrial and commercial enterprises, the life of the people, and so forth—all this is sketched in simple language and lucid arrangement, and pictured in four coloured plates and about fifty illustrations. Lord Strathcona contributes an introduction, and commends the volume to favourable consideration.

EDUCATION.

The Evolution of the Elementary Schools of Great Britain. By James C. Greenough, A.M., LL.D., Principal of Massachusetts Normal School, Westfield. (\$1.20 net. Appleton. International Education Series, No. 56.)

Dr. W. T. Harris, the general editor of the Series, who contributes a considerable preface, certifies the volume "as a competent study of one of the most important national educational systems in the world, written from the standpoint of an American director of schools for the training of teachers." Dr. Greenough certainly took special pains to understand what he writes about. "During my recent residence in London and Oxford for the greater part of a year," he says, "I gave my time mainly to visiting schools, conferring with teachers and others interested in education, and in availing myself of the abundant facilities for studying the origin and progress of the elementary schools of England furnished by the Library of the British Museum." He sketches generally the origin and development of the schools, considers the religious question, reviews the training colleges, and sets forth a chapter of conclusions (with a full print of the Education Act, 1902), adding a final chapter on the elementary schools of Scotland. The summary is very good, but the main interest lies in the incidental commentary, which is independent and, on the whole, very fair (as undoubtedly it is meant to be). Thus:—"Some of the teachers of the practising schools connected with the training colleges furnished some of the best examples of good teaching that I have seen, whether in England or America. . . . It is the great misfortune of very many of the training colleges of England that they lack adequate practising schools in organic and sympathetic connexion with the normal college. Where a suitable practising school is found . . . the superior quality of the training is always evident. . . . There are many things that tend to check the aspirations of one who would teach in an elementary school in England. Socially his rank is quite inferior to that of the teacher of an elementary school in the United States. . . . The uniformity of standard secured by the Code does not allow of the same liberty of adapting courses of study to local needs as is enjoyed in the schools of the United States, though the improved methods of inspection give the English teacher much more liberty than was possible under the method of inspection by individual examinations. The inventive genius of teachers has less opportunity in England than in the United States. . . . The English system of elementary schools is superior to ours in that it is organized under one Central Authority." But points like these need to be taken in their connexion. The book is well balanced and very instructive.

(1) *A General View of the History and Organization of Public Education in the German Empire.* By W. Lexis, Ph.D., Professor of Political Economy in the University of Göttingen. Translated by G. J. Tamson, Ph.D., M.A., Professor and Lecturer of English in the University of Göttingen. (3s. 6d. net. Asher.)—(2) *German Universities.* By Mabel Bode, Ph.D. (1s. net. King.)—(3) *Notes on German Schools.* By William H. Winch, M.A., Inspector of Schools. (6s. Longmans.)

(1) Prof. Lexis edited a comprehensive work on German education in four volumes ("Das Unterrichtswesen im Deutschen Reich," published by Messrs. Asher last year) for the International Exhibition in St. Louis "at the suggestion and with the support of the Prussian Minister of Education." The present volume is extracted from these semi-official volumes, the different sections of which were written by different German specialists. It contains a concise account of the historical development and of the present organization, with statistical summaries, of the universities and other academical institutions, the secondary schools, girls' schools, elementary schools, training colleges, technical high schools, high schools for special subjects (mining, forestry, agriculture, &c.), and middle and lower professional schools. It is a handy and authoritative conspectus of the main facts.—(2) Miss Bode's pamphlet is a lucid "Review of Prof. Paulsen's work on the German University System," emphasizing the chief points and throwing in an occasional criticism. It may be recommended to those that have not got Prof. Paulsen's book. The writer of the preface expresses surprise that this has not been translated into English.

Why, for ten years past we have been acquainted with the "authorized translation by Edward Delavan Perry, Professor in Columbia College, New York, with an introduction by Nicholas Murray Butler," published by Messrs. Macmillan. In this connexion it is interesting to note that the title-page of the original two volumes, of which "the German Universities" forms the introductory part, states that they were "für die Universitätsausstellung in Chicago 1893 unter Mitwirkung zahlreicher Universitätslehrer herausgegeben von W. Lexis." It will thus be seen that Prof. Lexis is an old hand at this subject.—(3) Mr. Winch does not offer "a treatise on German education as a whole," but only some personal observations in "the primary, middle, and that section of secondary schools in which modern languages and science take a prominent part," and that "with special relation to Curriculum and Methods of Teaching." Part I. (pages 1-66) is a narrative of facts, interspersed with impressions and criticisms, as to school authorities, fees, hours and holidays, buildings, teachers (with their training and salaries), methods, curricula, examination and promotion, and discipline. Part II. (pages 69-264) exhibits reports of lessons in the various subjects actually heard by the author in the different classes of schools mentioned, in Frankfort, Leipzig, Hamburg, and Berlin. Mr. Winch is careful to record all the essential circumstances in each case, and his criticisms are scrupulously fair. We do not know any book that conveys a more definite, vivid, or just impression of the work actually done in the class of German schools reviewed in Mr. Winch's unpretentious volume.

MORAL AND RELIGIOUS.

Science and Immortality. By William Osler, M.D., F.R.S., Regius Professor of Medicine at Oxford University. (2s. 6d. Constable.)

This is an "Ingersoll Lecture" at Harvard, setting out a "simple objective statement of some of the existing conditions of thought." Dr. Osler divides mankind into three classes—Laodiceans, Gallionians, and Teresians—according to their interest or lack of interest in a future life. His diagnosis, based mainly on observation of American life, is gloomy enough; how far it holds good elsewhere is a question for inquirers elsewhere, and especially for the religious guides of the various communities. There is no depth of analysis, and one lays down the lecture with the feeling that Dr. Osler has declined to handle the essential elements of the subject. It is an ornately descriptive outside sketch.

Shakespeare's Chart of Life. By William Miller, LL.D., D.D., C.I.E., Principal of the Madras Christian College and Vice-Chancellor of the University of Madras. (Rs. 4. Natesan.)

This volume is a collection of four fresh and vigorous studies on "King Lear," "Macbeth," "Hamlet," and "Othello," which have already been published separately. The reader must not look for annotations: the purpose of the work is ethical. All four tragedies "are presentations of the deepest truths which any poet has hitherto been able to grasp and to embody concerning the social and individual life of man"; and Dr. Miller addresses himself to expound the significance of life as thus displayed. Not that he pins himself to the belief that Shakespeare had definitely present to his mind all that his expounder sees in the tragedies: he is "convinced that the tragedies embody mighty truths which in their practical bearing are of inestimable value," and that is enough for him. The expositions have grown out of class-work, but they are well worth the attention of students of life as well as of students of literature. They are really very able criticisms, with thoughtful practical applications, and to many readers they will open out far-reaching vistas of ideas. Pupils studying any of the plays ought to have ready access to this book for collateral reading on their own account.

Practical Morals: a Treatise on Universal Education.

By John K. Ingram, LL.D. (3s. 6d. Black.)

The sub-title is borrowed from Comte, and the work follows closely the arrangement set forth in the plan of the practical portion of "A System of Positive Morals, or Treatise on Universal Education," which Comte had projected, but never executed—"that, namely, of accompanying in thought the adherent of the Religion of Humanity through the successive stages of his existence, and indicating the duties proper to each, as they will be, and have already in some degree been, laid down by the Positivist priests or apostles on the appropriate occasions in the lives of believers, marked by the several Social Sacraments." The volume may be regarded as a sequel to the author's "Human Law and Morals according to Auguste Comte" (1901), which essayed "to exhibit, in accordance with the Positivist doctrine, the foundations of morals in the nature and situation of our race." Dr. Ingram now concerns himself with education, in the wide sense of the improvement of human nature. Apart altogether from Comte and Comtism, the work presents the fruits of much thought and experience, and deserves to be carefully perused by non-Comtists as well as by Comtists. Dr. Ingram always thinks for himself, even though the result be to place him at issue with "the Master" on occasional points of detail.

Messrs. Watts & Co. issue for the Rationalist Association (1) *Christianity and Rationalism on Trial* (6d.)—a series of articles by nine different writers, originally contributed to the *Clarion*, "in

criticism of the more important papers written by the Christian apologists" in the same paper (and since published by Messrs. Macmillan in sixpenny form); and (2) *Do we Believe?* by John Allan Hedderwick (6d.)—an analysis of an extended correspondence on the subject in the columns of the *Daily Telegraph*. Mr. Hedderwick is constructive also.

Messrs. Longmans issue a popular edition of *Religion for all Mankind*, "based on facts which are never in dispute," by the Rev. Charles Voysey, B.A. (1s. net). The volume is intended "chiefly for those who have doubted and discarded the Christian religion, and, in consequence, have become Agnostics and Pessimists," but also "for the help and comfort of all."

NEW EDITIONS AND REPRINTS—GENERAL.

Messrs. Smith, Elder, & Co. announce a new series, comprising some of the best works of modern authors, under the title of "The Waterloo Library" (3s. 6d. each). The first volume is *The Cruise of the "Cachalot" round the World after Sperm Whales*, by Frank T. Bullen, F.R.G.S., First Mate—the twelfth impression (second edition) of a fascinating story, with eight illustrations and a chart. Paper and type are excellent, and the binding is strong and tasteful.

Mr. Fisher Unwin has issued a "People's Edition" of *The Hungry Forties* (6d.)—a book of painful interest, economic and historical as well as political.

Messrs. Archibald Constable & Co. publish a new edition of *Bartholomew Sastrou, the Memoirs of a German Burgomaster of the Sixteenth Century*, translated by Albert D. Vandam (3s. 6d. net). Mr. Herbert A. L. Fisher furnishes an interesting introduction. There are eight illustrations and the print and get-up are good.

Messrs. Constable also issue a delightful edition of *Travels round our Village*, by Eleanor G. Hayden (3s. 6d. net)—a charming and shrewd series of sketches, with a score of characteristic illustrations by L. Leslie Brooke.

Mr. H. R. Allenson brings out in his "Sixpenny Series" (1) *Carlyle's Heroes and Hero-Worship*, and (2) *Eleven Sermons* (second selection), by the late Rev. F. W. Robertson, of Brighton. The type is large and readable.

Messrs. Watts & Co. issue for the Rationalist Press Association *The Creed of Christendom*, by the late W. R. Greg (6d.). They also publish *The Children's Book of Moral Lessons*—First Series (Self-Control and Truthfulness)—by F. J. Gould (6d.).

FIRST GLANCES.

SCIENCE.

Natural History of some Common Animals. By Oswald H. Latter, M.A. (Oxon.). 5s. net. Cambridge University Press (Cambridge Biological Series).

[“Animals which usually serve as types of animal structure in elementary courses of zoology.” Function considered as well as structure; each animal presented as “a living thing.” 54 figures. Lucid and stimulating treatment.]

Physiology, Elementary Practical. By John Thornton, M.A. 3s. 6d. Longmans (Practical Elementary Science Series).

[Suits Stage I. (Elementary) Board of Education and similar syllabuses. Clear, practical, and sound. 178 illustrations, some coloured. Questions on each chapter; glossary.]

Scholarship Chemistry. By T. W. Gardner, B.A. (Lond.). 2s. net. Normal Press (Normal Tutorial Series).

[Clear and adequate; 165 experiments; 109 figures; summary and questions to each chapter; numerical answers.]

Scholarship General Elementary Science. By T. W. Gardner, B.A. (Lond.). 2s. 6d. net. Normal Press (Normal Tutorial Series).

[Exposition full and good; 270 experiments and figures; summary and questions to each chapter; numerical answers.]

MODERN LANGUAGES.

French Unseens. Edited by the Rev. S. E. Longland, M.A. (1) Junior, in 2 books. 6d. each. (2) Senior, in two books. 8d. each. Rivingtons.

[Of the standard of different Oxford and Cambridge examinations. Judiciously selected and arranged. Nicely printed and got up.]

German Grammar, Aue's Elementary. Revised and enlarged by Otto Schlapp, Ph.D., Lecturer in German, Edinburgh University. 2s. Chambers.

[Freely recast. Exercises after grammar; notes to the exercises; vocabulary. An esteemed work, judiciously improved.]

Portuguese Self-taught. By E. da Cunha. 2s. 6d. cloth. Marlborough.

[Thimm's system; vocabularies, with phonetic pronunciation; brief elementary grammar; idiomatic phrases, &c. Useful.]

Spanish Commercial Correspondence and Technicalities. By W. N. Cornett. 2s. net. Hirschfeld.
[Varied exemplification, with useful notes, especially on idioms; careful attention to details. Very serviceable.]

HISTORY.

Battles of the Nineteenth Century. Part I. 6d. net. Cassell.
[New issue; about twenty-four fortnightly parts. Nearly a thousand original illustrations—portraits, maps, plans, &c.—and a series of plates in colour. Vivid description and narrative by experienced writers.]

British History, A Synopsis of. 6d. Oliver & Boyd.
[Large outlines, with dates, and useful tables in appendix.]

British History in Review. By M. MacArthur. 1s. 6d. Blackie.
[Pretty full and intelligent analysis.]

British History, McDougall's Date-Book and Outline of. 2d.
[Thin outline, with dates.]

England, Cassell's History of. Empire Edition. Part I. 6d. net.
[The first examples of the Rembrandt photogravure plates—the special feature of this issue—raise high expectations.]

England, Little Arthur's. By Lady Callcott. 1s. 6d. Murray.
[New edition, with two fresh chapters, bringing the history down to the death of Victoria. Forty-five illustrations.]

English History, Analysis of. By W. C. Pearce and the late Dr. S. Hague, LL.B. Revised (except the Hanoverian Period) by W. F. Baugust. 1s. Murby.

["A comprehensive and self-explanatory reading- and text-book." "Completely revised edition." Biographical appendix; examination papers; and 1,400 questions; tables ethnological (two) and genealogical (twelve); 8 maps. Well written and clearly arranged.]

Roman History, A Synopsis of, to 138 A.D. By W. F. Masom, M.A. Lond. and Camb., and J. F. Stout, B.A. Camb. 2s. 6d. Clive.
[Intelligent; useful. Interleaved.]

Test Questions in History. By Arthur T. Flux. 1s. Meiklejohn & Holden (Prof. Meiklejohn's Series).
[British history. Judicious selection from various public examination papers. Useful as guide and test.]

PHYSIOGRAPHY.

Physical Geography, Elementary Class-Book of. By William Hughes, F.R.G.S. New and revised edition, by R. A. Gregory, F.R.A.S., Professor of Astronomy, Queen's College, London. 1s. 6d. Philips.
[Wholly remodelled; compact, clear, simple. Fifty-two illustrations.]

Physical Geography, Skerry's Practical Papers in. By George E. Skerry, F.R.G.S., F.R.S.L. 1s. 6d. net. Skerry (27 Chancery Lane, W.C.).
[Plain and practical; sure to be useful.]

Physiography: an Introduction to the Study of Nature. By T. H. Huxley. Revised and partly rewritten by R. A. Gregory, Professor of Astronomy, Queen's College, London. 4s. 6d. Macmillan.
[Considerably altered; 301 illustrations, nearly all new.]

Physiography, Elementary. By T. W. Gardner, B.A. Lond. 3s. 6d. net. Normal Press (Normal Tutorial Series).
[Summaries; questions; 329 experiments; 326 figures.]

Physiography, The Local Examination. By W. J. Perry, M.A., LL.D. 2s. Relfe.
[Lucid and simple examination questions; thirty-six figures.]

RELIGION AND MORALS.

Eager Heart: A Christmas Mystery-Play. By A. M. Buckton. 1s. net. Methuen.
[Well conceived and deftly written.]

History, Old Testament, for use in Schools. By the Rev. O. R. Barnicott, LL.D. 1s. net. Dent.
[Very simple and clear narrative. Prefatory hints to teachers. Appendix of examination questions. Map.]

Learning, Sound, and Religious Education. By Alico Gardner. 1s. Clay.
[Lecture at King's College (London) Women's Department, introductory to courses of Biblical study. Broad-minded, ably reasoned, and persuasive.]

Moral Lessons, The Children's Book of. By F. J. Gould. Third Series. 2s. Watts.
[The Family—People of other Lands—Historical Sketches of various important aspects of Industry, Art, Science, and Religion. Laborious, varied, and attractive.]

Stories: (1) Old Testament, (2) New Testament. By Katherine E. Verulam. National Society's Depository.
[Retold in very simple language for little children.]

Stories, Bible: (1) Old Testament, (2) New Testament. Edited, with Introduction and Notes, by Richard G. Moulton M.A. (Camb.),

Ph.D. (Penn.), Professor of Literature in English in the University of Chicago. 1s. 6d. each. Macmillan.

[Form "The Children's Number of the Modern Reader's Bible." The stories are in the language of Scripture, altered only by omissions. Nicely got up in handy form.]

EDUCATION.

Biology, The Teaching of, in the Secondary School. By Francis E. Lloyd, A.M., and Maurice A. Bigelow, Ph.D., Professors in Teachers' College, Columbia University. 6s. net. Longmans (American Teachers' Series).

Board of Education. (1) Reports from University Colleges, 1904. 11d. (2) Special Reports on Educational Subjects, Vols. 12-14: Educational Systems of the Chief Crown Colonies and Possessions of the British Empire, including Reports on the Training of the Native Races. 2s.; 1s. 8d.; 1s. 8d. (3) Regulations and Syllabus for the King's Scholarship Examinations, 1905. New Edition. Wymans.

German, The Teaching of, in Secondary Schools. By Elijah W. Bagster-Collins, Adjunct Professor of German in Teachers' College, Columbia University. 6s. 6d. net. Macmillan.

History of Education, An Unwritten Chapter in the. By H. Kingsmill Moore, D.D. 7s. 6d. net. Macmillan.

["The History of the Society for the Education of the Poor of Ireland, generally known as the Kildare Place Society, 1811-1831."]

Infant School, The: its Principles and Methods. By J. Gunn, M.A., D.Sc. 3s. 6d. Nelson.

Oberlin and his Educational Work. By H. Holman. 1s. net. Charles & Dible (Pioneers of Education).

[Careful and sympathetic sketch, with portraits of Oberlin and Louise Scheppler. Bibliography.]

MISCELLANEOUS.

Agricultural Education, Report of the Conference on, held at Gloucester, October 15, 1904. Edited by Charles Bathurst, Jun., M.A., and John C. Medd, M.A. 3d. (4½d. post free). Gloucester: County Education Committee.

[Valuable papers on both agricultural and educational aspects.]

Books for the Bairns, No. 105: Bluebeard—a Nursery Tale. By Marion Adams. Illustrated by Brinsley Le Fanu. 1d. London: "Books for the Bairns" Office.

Burns, Songs of. 1d. Leng (Penny Handbooks for the People).

[Large and representative selection.]

Columbia University: Teachers' College—The Dean's Report, 1904.

Dance Music Book, Aunt Kate's. 1d. Leng.

[26 dances. "No popular dance has been omitted."]

Doctors and Drinking. 1d. United Kingdom Alliance.

[Opinions; 8 portraits. New and revised edition.]

Gardening, "One and All," 1905. Edited by Edward Owen Greening. 2d. Agricultural and Horticultural Association (92 Long Acre, W.C.).

[Tenth annual issue. Combines popular interest with technical information. 40 original articles by capable writers. About 150 photo-engravings and woodcuts. Excellent.]

Head Masters, The Incorporated Association of: Report of the Council for 1904; with Appendices. 1s. Whittaker.

Home is Best. Papers by Susan Sybilla Soulsby. Edited, with Preface, by J. H. M. Soulsby. 1s. net. Longmans.

[A dozen pleasantly persuasive papers. Three illustrations.]

Johns Hopkins University Circular, No. 7, 1904.

Matriculation (London University) Directory. No. XXXIX. January, 1905. 1s. net. Clive.

New South Wales, The Year-Book of. Agent-General, Westminster Chambers, S.W.

Smithsonian Institution: Annual Report, 1902-03.

[Usual collection of important papers in Appendix.]

Speaking, On Public: What Eloquence is, and how to acquire it. By A. Public Speaker. 2s. Duffy (Dublin).

[Very good sense, effectively presented.]

Sugar Convention, The Results of the. By G. H. Perris. 2d. Cobden Club.

[Very full and able investigation.]

Tales, Comic School. By Henry J. Barker, M.A., lato Instructor of Pupil-Teachers under the London School Board. 1s. net. Jarrolds.

[Tales about my Lectures on Humour at School—about Scholars—about Teachers. Five illustrations.]

Time Chart of the World. Patented by Edward Cowell. 6d. net. Philips.

[Ingeniously shows at once the time in all important cities.]

Tone, Beauty of, in Speech and Song. By Arthur Lovell. Simpkin, Marshall, & Co.

[The author has listened to the nightingale and studied the solar plexus: hence "the unveiling of a long-buried secret."]

OXFORD UNIVERSITY PRESS.

Books suitable for Candidates at Oxford Local Examinations, 1906.

RELIGIOUS KNOWLEDGE.

- The Oxford Helps to the Study of the Bible.** New, Enlarged, and Illustrated Edition. Pearl 16mo, 1s. net; Nonpareil 8vo, 2s. 6d.; Large-type Edition, 5s.
- Oxford Helps to the Study of the Book of Common Prayer.** By the late W. R. W. STEPHENS, D.D. 2s. 6d. net.
- Revised Version of the Holy Bible—**
Pearl 16mo, 10d.; Ruby 16mo, 3s.
- Revised Version of the New Testament—**
Nonpareil 32mo, 3d.; Brevier 16mo, 6d.; Long Primer 8vo, 9d.
- The Greek Testament,** with the Readings of the Revisers and with Marginal References. 4s. 6d.; on India Paper, 6s.
- Old Testament History for Schools.** By the late T. H. STOKOE, D.D. In Three Parts. With Maps, 2s. 6d. each.
- Manual of the Four Gospels.** By the same. 3s. 6d. Or, separately, Part I, *The Gospel Narrative*, 2s.; Part II, *The Gospel Teaching*, 2s.
- Life and Letters of St Paul.** By the same. 2s. 6d. Or, in Two Parts, each 2s.
- First Days and Early Letters of the Church.** By the same. 3s. Or, separately, Part I, 1s. 6d.; Part II, 2s.
- Graduated Lessons on the Old Testament.** By U. Z. RULE, M.A. Edited by LL. J. M. BEBB, M.A. In 3 Volumes, 1s. 6d. or 1s. 9d. each.

ENGLISH.

- A Primer of Historical English Grammar.** By HENRY SWEET, M.A., Ph.D. 2s.
- Shakespeare.** Edited by W. G. CLARK and W. ALDIS WRIGHT. *Macbeth*, 1s. 6d. *Henry the Fifth*, 2s. *The Tempest*, 1s. 6d.
- Spenser's Faery Queene.** Book I. With Introduction and Notes by G. W. KITCHIN, and Glossary by A. L. MAYHEW. 2s. 6d.
- Sir Thomas More's Utopia.** Edited, with Introduction, Notes, and Glossary, by J. CHURTON COLLINS. 3s. 6d.
- Burke.—Thoughts on the Present Discontents:** the two Speeches on America. Edited by the late E. J. PAYNE. 4s. 6d.
- Keats's Odes.** Edited by A. C. DOWNER. With 4 Illustrations. 3s. 6d. net.
- Scott.—Lay of the Last Minstrel.** Edited by W. MINTO. 1s. 6d. Separately, Introduction and Canto I., 6d.
- Shelley's Adonais.** Edited by W. M. ROSSETTI and A. O. PRICKARD. Second Edition. 3s. 6d. and 5s.
- Poems of English Country Life.** Selected and edited by H. B. GEORGE and W. H. HADOW. 2s.

FRENCH.

- Concise French Grammar,** including Phonology, Accidence, and Syntax. For use in Upper and Middle Forms. By A. H. WALL. 4s. 6d.
- French Primer,** For use in Middle and Lower Forms. By the same. 2s.
- Bug-Jargal.** By VICTOR HUGO. Edited by LOUIS SERS. (*Oxford Modern French Series*.) 2s.

GERMAN.

- Kinderfreuden,** von A. E. C., being an Illustrated German Reading Book for Young Children. 1s. 6d.
- Short German Plays,** for Reading and Acting. With Notes and Vocabulary by EMMA S. BUCHHEIM. 3s.
- Passages for Unprepared Translation into German.** Selected by EDUARD BURKE. 3s.

LATIN AND GREEK.

By J. B. ALLEN.

- An Elementary Latin Grammar.** New and Enlarged Edition. 2s. 6d.
- A First Latin Exercise Book.** 2s. 6d.
- A Second Latin Exercise Book.** 3s. 6d.
- An Elementary Greek Grammar.** Containing Accidence and Elementary Syntax. 3s.
- Lives from Cornelius Nepos.** Edited by J. B. ALLEN. 1s. 6d.
- Reddenda Minora;** or, Easy Passages, Latin and Greek, for Unseen Translation. By C. S. JERRAM. Revised and Enlarged. 1s. 6d.

LATIN AND GREEK—(continued).

- Anglice Reddenda;** or, Extracts, Latin and Greek, for Unseen Translation. By the same Editor. 2s. 6d. Second Series, 3s. Third Series, 3s.
- Easy Greek Reader.** By EVELYN ABBOTT. 2s.
- An Elementary Latin Dictionary.** By C. T. LEWIS. 7s. 6d.
- A School Latin Dictionary.** By C. T. LEWIS. 12s. 6d.
- An Abridged Greek Lexicon for Schools.** By LIDDELL and SCOTT. 7s. 6d.
- An Intermediate Greek Lexicon.** By LIDDELL and SCOTT. 12s. 6d.
- Caesar.—The Gallic War.** Edited by C. E. MOBERLY. With Maps. *Books I and II*, cloth, 2s. *Books I-III*, stiff covers, 2s.
- Cicero.—Philippic Orations, I-III, V, VII.** By J. R. KING. 3s. 6d.
- Horace.—Odes, Book I.** Edited by E. C. WICKHAM. 2s.
- Virgil.—Aeneid, Book I.** Edited by C. S. JERRAM. 1s. 6d.
- Aeschylus.—Persae.** Edited by ARTHUR SIDGWICK. 3s.
- Demosthenes.—Philippic I, Olynthiacs I-III.** Edited by E. ABBOTT and P. E. MATHESON. 3s.
- Euripides.—Alcestis.** Edited by C. S. JERRAM. 2s. 6d.
- Xenophon.—Anabasis, Book I.** By J. MARSHALL. 1s. 6d. *Book II.* By C. S. JERRAM. 1s. 6d. *Book III*, 1s. 6d. *Book IV*, 1s. 6d. *Books II and IV* together, 3s.
- Each volume has the full Vocabulary bound up with it. The Vocabulary can also be had separately for 1s.
- Primer of Greek Prose Composition.** By J. Y. SARGENT. 3s. 6d.

HISTORY.

- Companion to English History (Middle Ages).** Edited by F. P. BARNARD. With 97 Illustrations. 8s. 6d. net.
- A School History of England.** By O. M. EDWARDS, A. J. CARLYLE, R. S. RAIT, and others. With numerous Maps. 3s. 6d.
- Historical Geography of the British Colonies.** By C. P. LUCAS. Introduction: Origin and Growth of English Colonies. With 8 Maps. By H. E. EGERTON. Vol. II. The West Indian Colonies. With 12 Maps. 7s. 6d.

MUSIC.

- A Chart of the Rules of Harmony.** By A. SOMERVELL. 1s. net.
- A Chart of the Rules of Counterpoint.** By the same. 1s. net.

NATURAL SCIENCE.

- An Elementary Treatise on Heat.** By BALFOUR STEWART. 8s. 6d.
- Woolcombe.—Practical Work in General Physics.** By W. G. WOOLCOMBE. 2s. each Part.
- PART I. General Physics. PART II. Heat. Second Edition, Revised.
- PART III. Light and Sound. PART IV. Magnetism and Electricity.
- A Class-Book of Chemistry.** By W. W. FISHER, M.A. 4s. 6d.

GEOMETRY.

- Geometry for Beginners.** An Easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. 1s. 6d.
- Experimental and Theoretical Geometry.** By A. T. WARREN. Second Edition. 2s. (Following the plan recommended by the Mathematical Association.)
- Elementary Plane Trigonometry.** By R. C. J. NIXON. 7s. 6d.
- Euclid Revised.** Edited by R. C. J. NIXON. 6s. *Book I*, 1s. *Books I, II*, 1s. 6d. *Books I-IV*, 3s. *Books V, VI*, 3s. 6d.
- Geometrical Exercises from "Euclid Revised."** By A. LARMOR. 3s. 6d.
- The "Junior" Euclid.** By S. W. FINN. *Books I and II*, 1s. 6d. *Books III and IV*, 2s.

MISCELLANEOUS.

- Arithmetic.** By R. HARGREAVES. 4s. 6d.
- Book-keeping.** New and Enlarged Edition. By Sir R. G. C. HAMILTON and J. Ball. 2s.
- Ruled Exercise Book to the above, 1s. 6d.; to Preliminary Course only, 4d.
- Elementary Political Economy.** By E. CANNAN. 1s.
- Cornewall-Lewis's Remarks on the Use and Abuse of some Political Terms.** New Edition, with Introduction, by T. RALEIGH. Paper, 3s. 6d.; cloth, 4s. 6d.

Crown 8vo, cloth, 3s.

SCHOOL TEACHING AND SCHOOL REFORM.

A Course of Four Lectures on SCHOOL CURRICULA AND METHODS delivered to Secondary Teachers and Teachers in Training at Birmingham, during February 1905.

BY

SIR OLIVER LODGE,

Principal of the University of Birmingham.

WILLIAMS & NORGATE,

14 Henrietta Street, Covent Garden, London, W.C.

MATHEMATICS.

15686. (G. H. HARDY, M.A.)—The area Δ and semi-perimeter s of a triangle are fixed. Show that the maximum and minimum values of one of the sides are roots of the equation $sx^2(x-s) + 4\Delta^2 = 0$. Discuss the existence of real maximum and minimum values.

Solution by the Proposer.

If a is stationary, and $a + b + c = 2s = \text{const.}$ (i.),

$s(s-a)(s-b)(s-c) = \Delta^2 = \text{const.}$ (ii.),

then $da = 0$, $db + dc = 0$ and $(s-c)db + (s-b)dc = 0$,

or $b = c$, $s - b = \frac{1}{2}(a + c - b) = \frac{1}{2}a$,

and so (ii.) takes the form $sa^2(a-s) + 4\Delta^2 = 0$. It is worth while to note the fact that a and R attain stationary values simultaneously; hence we cannot satisfy $da/dR = 0$. For R is stationary if abc is so, and this gives

$$bc da + ca db + ab dc = 0, \quad da + db + dc = 0,$$

$$(s-b)(s-c)da + (s-c)(s-a)db + (s-a)(s-b)dc = 0;$$

so that

$$\begin{vmatrix} (s-b)(s-c) & bc & 1 \\ (s-c)(s-a) & ca & 1 \\ (s-a)(s-b) & ab & 1 \end{vmatrix} = 0,$$

or $(b-c)(c-a)(a-b)s = 0$. If $b = c$, we have the case already discussed. If $a = b$ (say), then $s - c = 2a - s$, and so (ii.) gives

$$s(s-2a)(s-a)^2 + \Delta^2 = 0.$$

Let us consider the equation $sx^3 - s^2x^2 + 4\Delta^2 = 0$. If $x = 1/y$,

$$y^3 - s^2y/(4\Delta^2) + s/(4\Delta^2) = 0.$$

The condition that all the roots should be real is that

$$s^2/(16\Delta^4) - s^6/(432\Delta^6) < 0, \quad s^4 > 27\Delta^2.$$

If this condition is not satisfied, the values of s and Δ are impossible for a real triangle. If it is satisfied, two roots of $sx^2(x-s) + 4\Delta^2 = 0$ are positive, and there is one real maximum and one real minimum, as is geometrically obvious.

10114. (Professor DÉPREZ.)—On considère toutes les coniques inscrites au triangle ABC et dont les axes ont des directions données. (1) Les foyers et les sommets décrivent des cubiques; (2) le lieu d'un point situé sur un axe de l'une des coniques à une distance constante du centre est une conique.

Solution by J. A. H. JOHNSTON, M.A.

This Question is well adapted for solution in oblique co-ordinates. Let the variable conic touch the axes and the line $ax + by + 1 = 0$. Its equation is then

$$(px + qy + 1)^2 + 2\lambda xy = 0 \dots\dots\dots(i.),$$

and, if $ax + by + 1 = 0$ be a tangent, then $-\lambda = 2(a-p)(b-q)$, and

$$(2pq + \lambda) = 2bp + 2aq - 2ab \dots\dots\dots(ii.).$$

Let $lx + my = 0$ give the assigned direction for a principal axis. Such directions are the bisectors of the line pair $p^2x^2 + q^2y^2 + 2(pq + \lambda)xy = 0$, and therefore $lx + my$ is a factor of

$$(pq + \lambda - p^2 \cos \omega) x^2 - (p^2 - q^2) xy - (pq + \lambda - q^2 \cos \omega) y^2.$$

It follows that

$$(pq + \lambda - p^2 \cos \omega) m^2 + (p^2 - q^2) lm - (pq + \lambda - q^2 \cos \omega) l^2 = 0 \dots\dots\dots(iii.).$$

Equations (i.), with (ii.) and (iii.), completely define the conic and reduce its constants to one arbitrary constant.

The required loci are best investigated by the aid of the locus of the centres. If (x', y') be the centre,

$$\left. \begin{aligned} x' &= \frac{-q}{2pq + \lambda} = \frac{-q}{2(bp + aq - ab)}, & y' &= \frac{-p}{2pq + \lambda} = \frac{-p}{2(bp + aq - ab)} \\ \text{and therefore } p &= \frac{2aby'}{2ax' + 2by' + 1}, & q &= \frac{2abx'}{2ax' + 2by' + 1} \end{aligned} \right\} \dots\dots\dots(iv.).$$

If these values for p and q in (iv.) be substituted in (iii.), the locus of the centres appears as a conic, viz.,

$$2ab(l^2 \cos \omega - lm)x'^2 - 2ab(m^2 \cos \omega - lm)y'^2 + 2(l^2 - m^2)abx'y' + (l^2 - m^2)(2ax' + 2by' + 1) = 0 \dots\dots\dots(v.).$$

(a) *Locus of a Point on a Principal Axis at a Constant Distance from the Centre.*—Let (x, y) be the point. Then

$$\left. \begin{aligned} l(x-x') + m(y-y') &= 0 \\ (x-x')^2 + (y-y')^2 + 2(x-x')(y-y') \cos \omega &= k^2 \end{aligned} \right\} \dots\dots\dots(vi.).$$

Equations (vi.) show that both $(x-x')$ and $(y-y')$ have constant values, and, if $x = x' + a'$ and $y = y' + b'$, since (x', y') lies on a conic, it follows that (x, y) also describes a conic.

(b) *Locus of a Focus.*—If x, y be a focus, by well-known equations, (x, y) lies on the conic $4(a-b)\phi = \phi_x^2 - \phi_y^2$, or, in our case, $(p^2 - q^2)[p^2x^2 + q^2y^2 + 2(pq + \lambda)xy + 2px + 2qy + 1] = [p^2x + (pq + \lambda)y + p]^2 - [(pq + \lambda)x + q^2y + q]^2,$

and, if this be reduced, it assumes the following simple form:—

$$0 = -(2pq\lambda + \lambda^2)x^2 + (2pq\lambda + \lambda^2)y^2 - 2q\lambda x + 2p\lambda y$$

or $x^2 - y^2 - 2x'x + 2y'y = 0 \dots\dots\dots(vii.);$

therefore (x, y) satisfies

$$l(x-x') + m(y-y') = 0 \quad \text{and} \quad x^2 - y^2 - 2x'x + 2y'y = 0.$$

Solving for x' and y' , we find that

$$x' = \frac{m(x^2 + y^2) + 2lxy}{2(mx + ly)}, \quad y' = \frac{l(x^2 + y^2) + 2mxy}{2(mx + ly)} \dots\dots\dots(viii.).$$

If these values of x' and y' be now substituted in (v.), we shall find that

$$2ab(l^2 - m^2) \{ lm(x^4 + y^4) + 2[(l^2 + m^2) \cos \omega + lm]x^2y^2 + (l^2 + m^2 + 2lm \cos \omega)(x^3y + xy^3) \} + 2a(l^2 - m^2)(mx + ly)(mx^2 + my^2 + 2lxy) + 2b(l^2 - m^2)(mx + ly)(lx^2 + ly^2 + 2mxy) + 2(l^2 - m^2)(mx + ly)^2 = 0.$$

By testing the terms of the fourth degree, it is easily seen that $mx + ly$ is an irrelevant factor, and the locus appears as

$$ab[lx^3 + my^3 + (m + 2l \cos \omega)x^2y + (l + 2m \cos \omega)xy^2] + (am + bl)(x^2 + y^2) + 2(al + bm)xy + mx + ly = 0,$$

i.e., a cubic which may easily be shown to pass through the vertices of the given triangle of tangents, through the circular points at infinity, and to have a real asymptote parallel to $lx + my = 0$.

[Rest in Reprint.]

15734. (S. C. GOULD.)—Give all the different square numbers that can be formed by all the ten digits, each taken once and once only. The Proposer has developed eighty-seven such numbers. Are there any more?

Solution by the Proposer.

[Complete article in Reprint.]

15695. (H. A. WEBB, B.A.)—A spider and a fly are a feet apart. The fly starts moving in a direction at right angles to the line joining the animals, and continues moving with uniform velocity v feet per second in a straight line. At the same moment the spider starts moving towards the fly, and continues moving with uniform speed u feet per

second ($u > v$), along the "curve of pursuit," i.e., at any moment the spider is moving directly towards the fly. Show that the spider will catch the fly after $au/(u^2 - v^2)$ seconds.

Solutions (I.) by J. BLAICKIE, M.A.; (II.) by C. SEARLE;
(III.) by E. F. TITTLE and C. BICKERDIKE.

[Solutions too numerous to allow of nearly all being published.—Ed.]

(I.) Tait and Steele, p. 26, give $x = ae/(1 - c^2)$ where $c = v/u$. Thus $x = auv/(u^2 - v^2)$. But $v = x/t$; therefore time $= x/v = au/(u^2 - v^2)$.

(II.) Let P, Q be the positions of the spider at times t and $(t + \delta t)$ respectively. Draw PM, QN tangents to the "curve of pursuit." M, N are positions of fly at times t and $(t + \delta t)$. Distance of spider from fly $= PM = l$. Rejecting negligible small quantities, we have

$$\delta l = QN - PM$$

$$= (QN + QR) - (PM + QR)$$

$$= SN - (PR + RQ)$$

$$= SN - \delta s = v \delta t \cos \theta - \delta s = v \delta t \frac{dx}{ds} - \delta s / \delta t \frac{dt}{dt} = v/u \frac{dx}{dt} - u \frac{dt}{dt};$$

therefore $l = v/u x - ut + C$. When $t = 0$, $x = 0$, $l = a$; therefore $l = v/u x - ut + a$. When the spider catches the fly $l = 0$, $t = T$, $x = vT$; therefore $0 = v/u vT - uT + a$; therefore $T = ua/(u^2 - v^2)$.

(III.) Taking the initial directions of motion as axes, we have

$$u^2 = \left(\frac{dx}{dt}\right)^2 \left\{1 + \left(\frac{dy}{dx}\right)^2\right\}; \quad -\frac{v}{x} = \frac{d}{dt} \left(\frac{dy}{dx}\right) = \frac{dx}{dt} \frac{d^2y}{dx^2}$$

whence path traversed by spider is given by

$$(d^2y/dx^2)/[1 + (dy/dx)^2]^{\frac{3}{2}} = v/(ux);$$

therefore, if $z = dy/dx$, $[z + \sqrt{z^2 + 1}]^u a^v = x^v$ or $2z = (x/a)^k - (a/x)^k$, where $k = v/u$ and is < 1 ; therefore

$$2y = (x/a)^k x/(k+1) - (a/x)^k x/(1-k) - a/(k+1) + a/(1-k).$$

Thus, when $x = 0$, $y = ak/(1 - k^2)$, and time taken by fly to arrive at this point $= au/(u^2 - v^2)$. Time taken by spider to reach same point

$$= \int \frac{ds}{u} = \frac{1}{2u} \left\{ \left(\frac{x}{a}\right)^k \frac{x}{1+k} + \left(\frac{a}{x}\right)^k \frac{x}{1-k} \right\}_0^a = \frac{au}{u^2 - v^2}.$$

15075. (II. L. TRACHTENBERG.)—The straight line joining the centres of the two rectangular hyperbolas that touch four fixed straight lines is bisected at right angles by the directrix of the parabola which touches these straight lines.

Solutions (I.) by the PROPOSER, (II.) by Professor SANJANA, M.A.,
(III.) by W. H. BLYTHE, M.A.

(I.) The director circles of all the conics touching the four fixed straight lines form a coaxial system. But the centres of the two rectangular hyperbolas are their director circles and are therefore the limiting points of the system. Also the directrix of the parabola is its director circle and is therefore the radical axis of the system, and, since the join of the limiting points is bisected at right angles by the radical axis, it follows that the join of the centres of the two rectangular hyperbolas is bisected at right angles by the directrix of the parabola.

(II.) Of the four triangles formed by the fixed straight lines taken three and three, two must be obtuse-angled. Draw the two circles for which these two triangles are severally self-conjugate: then either point of intersection of the circles is the centre of a rectangular hyperbola touching the given lines. Thus the line of centres of the hyperbolas is bisected at right angles by the line of centres of the circles, i.e., by the line joining the orthocentres of the two triangles. But, since the parabola touches the four given lines, the orthocentres of the four triangles lie all on its directrix; hence this directrix bisects at right angles the line of centres of the hyperbolas.

(III.) The following may be interesting, as it gives the analytical solution of the problem. A geometrical proof based on Cremona, *Projective Geometry*, 2nd ed., pp. 271 et seq., is intrinsically superior, however. It is shown in Salmon's *Conic Sections*, p. 254, that the conic

$$ua^2 + b\beta^2 + c\gamma^2 = 0$$

touches the four straight lines $la \pm m\beta \pm n\gamma = 0$ if $l^2/a + m^2/b + n^2/c = 0$, and that the locus of the centres of the conics is $l^2a + m^2\beta + n^2\gamma = 0$. Taking areal co-ordinates and expressing the condition that the conic may be a rectangular hyperbola, we have $a + b + c = 0$. If x, y, z are the co-ordinates of the centre, then $ax = by = cz$, for it is the pole of the line at infinity. Using these equations with those given above to find the co-ordinates of the centre, we find, in addition to the fact that x, y, z lies on the line of centres, that $xy + yz + zx = 0$. Therefore there are but two rectangular hyperbolas the centres of which lie at the intersection of the line of centres with the circle circumscribing the triangle of reference. Taking the condition that the conic should be a parabola, namely,

$ab + bc + ca = 0$, the two tangents drawn from the centre of the circle circumscribing circle $a = \beta = \gamma$ and given by the equation

$$(aa^2 + b\beta^2 + c\gamma^2)(a + b + c) = (ua + b\beta + c\gamma)^2$$

prove to be at right angles when the above condition is satisfied. Therefore the directrix of the parabola passes through the centre of the circle, and, being evidently at right angles to the line of centres, it bisects the chord of the circle made by this line, that is, the line joining the centres of the rectangular hyperbolas.

15736. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—(i.) Factorize into prime factors $N = (70,600,734^2 + 1)$. Here $N = q \cdot p^2$, where p is a large prime. (ii.) Show how to find very large numbers ($> 10^{50}$) of form

$$N = y^2 + 1 = q \cdot m^2,$$

wherein m is very large ($> 10^{25}$). Give examples.

Solution by the PROPOSER.

The published solutions of the Pellian equation $y^2 - Dx^2 = -1$ give the minimum integer solution (x, y) for all values of D , which admit of solution in integers, up to $D = 1500$. Each of these gives a factorization of $N = y^2 + 1 = D \cdot x^2$. In many of the cases the values of x, y given are very large. Thus Bickmore's table (*Brit. Assoc. Report*, 1893, pp. 73-120) gives

$$D = 1213; \quad N = 70600734^2 + 1 = 1213 \cdot 2027117^2,$$

$$D = 1381; \quad y > 2 \cdot 10^{32}, \quad x > 5 \cdot 10^{30},$$

$$D = 1453; \quad y > 2 \cdot 10^{38}, \quad x > 3 \cdot 10^{26}.$$

Again, taking any such solution of $y^2 - Dx^2 = -1$, this gives

$$(y^2 + Dx^2)^2 - D(2xy)^2 \equiv +1.$$

Multiplying these together by conformal multiplication gives a new solution $y^2 - Dx^2 = -1$; whence the new number $N_1 = y^2 + 1 = Dx_1^2$, where $y_1 = y(y^2 + 3Dx^2)$, $x_1 = x(3y^2 + Dx^2)$: here the new numbers N_1, y_1, x_1 are much higher than the previous N, x, y . And, by repeated conformal multiplication by the above unit form, the numbers can be raised indefinitely.

12952. (W. BOOTH.)—If Q stands for

$$ax^2 + 2hxy + by^2 + 2gzx + 2fyz + cz^2 + 2lxw + 2myw + 2nzw + dw^2,$$

then the determinant $\begin{vmatrix} aQ - L^2 & hQ - LM & gQ - LN \\ hQ - ML & bQ - M^2 & fQ - MN \\ gQ - LN & fQ - MN & cQ - N^2 \end{vmatrix}$ is equal to

$\Delta Q^2 \omega^2$, where $L = \frac{1}{2}(dQ/dx)$, $M = \frac{1}{2}(dQ/dy)$, $N = \frac{1}{2}(dQ/dz)$. Give a geometrical interpretation.

Solution by Professor NANSON.

The condition that the tangent cone from the point x to the conicoid

$$u \equiv \sum a_{pq} x_p x_q = 0 \quad (p, q = 1, 2, 3, 4)$$

may intersect the plane $a \equiv \sum a_p x_p = 0$

in a line pair is, if $u_p = \frac{1}{2}(du/dx_p)$,

$$\begin{vmatrix} (ua_{pq} - u_p u_q) & a_p \\ (a_q) & 0 \end{vmatrix} = 0 \quad \text{or} \quad \begin{vmatrix} (ua_{pq} - u_p u_q) & (a_p) & (0) \\ (a_q) & 0 & 0 \\ (u_q) & 0 & 1 \end{vmatrix} = 0,$$

and by simple combinations of rows and columns this reduces to

$$\frac{1}{u^2} \begin{vmatrix} (ua_{pq}) & (a_p) & (0) \\ (a_q) & 0 & -a \\ (0) & -a & 0 \end{vmatrix} = 0 \quad \text{or} \quad \Delta u^2 a^2 = 0,$$

i.e., either the conicoid is a cone or the vertex of the tangent cone lies on u or on a . By taking $a \equiv x_4$, we get the result in the Question.

[N.B.—The notation of the Question has not been entirely followed.]

15720. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Find the coefficient of n^6 in the product of the two series

$$1^7 + 2^7 + 3^7 + 4^7 + \dots + (n-1)^7 + n^7, \quad 1^8 + 2^8 + 3^8 + 4^8 + \dots + (n-1)^8 + n^8.$$

Solution by C. M. ROSS.

$$\begin{aligned} 1^7 + 2^7 + 3^7 + \dots + n^7 &= \frac{1}{8}n^8 + \frac{1}{2}n^7 + B_1 \frac{7}{2!} n^6 - B_3 \frac{7 \cdot 6 \cdot 5}{4!} n^4 + B_5 \frac{7 \cdot 6 \cdot 5 \cdot 4 \cdot 3}{6!} n^2 + C \\ &= \frac{1}{8}n^8 + \frac{1}{2}n^7 + \frac{7}{24}n^6 - \frac{7}{24}n^4 + \frac{1}{12}n^2, \end{aligned}$$

the constant being zero. Also

$$\begin{aligned} 1^8 + 2^8 + 3^8 + \dots + n^8 &= \frac{1}{9}n^9 + \frac{1}{2}n^8 + B_1 \frac{8}{2!} n^7 - B_3 \frac{8 \cdot 7 \cdot 6}{4!} n^5 + B_5 \frac{8 \cdot 7 \cdot 6 \cdot 5 \cdot 4}{6!} n^3 \\ &\quad - B_7 \frac{8 \cdot 7 \cdot 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2}{8!} n + C \\ &= \frac{1}{9}n^9 + \frac{1}{2}n^8 + \frac{2}{3}n^7 - \frac{7}{15}n^5 + \frac{2}{9}n^3 - \frac{1}{15}n, \end{aligned}$$

the constant being zero. Therefore the coefficient of n^6 in the product of the two series is zero.

N.B.— B_1, B_3, B_5 , and B_7 are Bernoulli's numbers.

15741. (R. CHARTRES.)—From a point within a triangle straight

lines parallel to the sides are drawn to the base. Find the mean value of the n -th power of the area of the triangle thus formed. (Elementary proof wanted.)

Solution by the Proposer.

$$a^{2n} = (p + q + r)^{2n},$$

having $(n + 1)(2n + 1)$ terms; therefore

$$M(q^{2n}) = \frac{a^{2n}}{(n + 1)(2n + 1)},$$

or
$$M(x^n) = \frac{\Delta^n}{(n + 1)(2n + 1)}.$$

If $n = 1$, then $M(x) = \frac{1}{6}\Delta$.

15704. (R. F. WHITEHEAD, B.A.)—Expand $\theta/\sin \theta$ in ascending powers of $\cos \theta$.

Solutions (I.) by Professor SANJANA, M.A.; (II.) by R. F. DAVIS, M.A.

It is well known that $\frac{\sin^{-1} x}{\sqrt{1-x^2}} = x + \frac{2}{3}x^3 + \frac{2.4}{3.5}x^5 + \dots$

Putting $x = \cos \theta$, $\frac{\frac{1}{2}\pi - \theta}{\sin \theta} = \cos \theta + \frac{2}{3}\cos^3 \theta + \frac{2.4}{3.5}\cos^5 \theta \dots$; also

$$\frac{\frac{1}{2}\pi}{\sin \theta} = \frac{1}{2}\pi(1-x^2)^{-\frac{1}{2}} = \frac{1}{2}\pi \left(1 + \frac{1}{2}\cos^2 \theta + \frac{1.3}{2.4}\cos^4 \theta \dots \right).$$

Hence, by subtraction,

$$\frac{\theta}{\sin \theta} = \frac{1}{2}\pi - \cos \theta + \frac{1}{2}\pi \frac{1}{2}\cos^2 \theta - \frac{2}{3}\cos^3 \theta + \frac{1}{2}\pi \frac{1.3}{2.4}\cos^4 \theta - \frac{2.4}{3.5}\cos^5 \theta \dots$$

(II.) Assume $\theta/\sin \theta = A_0 + A_1 \cos \theta + A_2 \cos^2 \theta + \dots$. Then, if θ and ϕ be complementary, $\frac{1}{2}\pi - \phi = \cos \phi (A_0 + A_1 \sin \phi + A_2 \sin^2 \phi + \dots)$ and $A_0 = \frac{1}{2}\pi$. Differentiating,

$$-1 = -\sin \phi (A_0 + A_1 \sin \phi + A_2 \sin^2 \phi + \dots) + (1 - \sin^2 \phi) (A_1 + 2A_2 \sin \phi + 3A_3 \sin^2 \phi + \dots).$$

Equating coefficient of $\sin^{n-1} \phi$ to zero, $-\Lambda_{n-2} + n\Lambda_n - (n-2)\Lambda_{n-2} = 0$, or $n\Lambda_n = (n-1)\Lambda_{n-2}$. Thus

$$\theta/\sin \theta = \frac{1}{2}\pi \left(1 + \frac{1}{2}\cos^2 \theta + \frac{1.3}{2.4}\cos^4 \theta + \dots \right) - \left(\cos \theta + \frac{2}{3}\cos^3 \theta + \frac{2.4}{3.5}\cos^5 \theta + \dots \right).$$

2361. (Rev. R. TOWNSEND, F.R.S.)—(1) Show that the three chords of intersection of the circumscribed with the three escribed circles of a plane triangle intersect collinearly with the three corresponding sides of the triangle. (2) Prove the corresponding property for a spherical triangle.

Solution by Professor SANJANA, M.A.

(1) Let the common chord with the A-escribed circle meet BC in X, and let D be the point of contact in that side. Then, as X is on the radical axis,

$$XB \cdot XC = XD^2;$$

therefore

$$\begin{aligned} XC/XD &= XD/XB \\ &= (XC - XD)/(XD - XB) \\ &= CD/DB, \end{aligned}$$

and hence

$$CD^2/DB^2 = XC/XB.$$

Similar results hold for the other sides. Therefore

$$\frac{XC}{XB} \frac{YA}{YC} \frac{ZB}{ZA} = \frac{CD^2}{DB^2} \frac{AE^2}{EC^2} \frac{BF^2}{FA^2} = \frac{(s-b)^2 (s-c)^2 (s-a)^2}{(s-c)^2 (s-a)^2 (s-b)^2} = 1;$$

so that X, Y, Z are collinear.

(2) If the triangle is spherical, X is the intersection with BC of the great circle through K_1 and K_2 , and $\tan^2 \frac{1}{2}XD = \tan \frac{1}{2}XB \tan \frac{1}{2}XC$; therefore

$$\frac{\tan \frac{1}{2}XC}{\tan \frac{1}{2}XD} = \frac{\tan \frac{1}{2}XD}{\tan \frac{1}{2}XB} = \frac{\tan \frac{1}{2}XC - \tan \frac{1}{2}XD}{\tan \frac{1}{2}XD - \tan \frac{1}{2}XB} = \frac{\sin \frac{1}{2}CD \cos \frac{1}{2}XB}{\sin \frac{1}{2}BD \cos \frac{1}{2}XC'}$$

and hence
$$\frac{\sin^2 \frac{1}{2}CD \cos^2 \frac{1}{2}XB}{\sin^2 \frac{1}{2}BD \cos^2 \frac{1}{2}XC} = \frac{\sin \frac{1}{2}XC \cos \frac{1}{2}XB}{\sin \frac{1}{2}XB \cos \frac{1}{2}XC'}$$

i.e.,
$$\frac{\sin^2 \frac{1}{2}CD}{\sin^2 \frac{1}{2}BD} = \frac{\sin XC}{\sin XB};$$

and similar results hold for the other sides. Therefore

$$\frac{\sin XC}{\sin XB} \frac{\sin YA}{\sin YC} \frac{\sin ZB}{\sin ZA} = \frac{\sin^2 \frac{1}{2}(s-b)}{\sin^2 \frac{1}{2}(s-c)} \frac{\sin^2 \frac{1}{2}(s-c)}{\sin^2 \frac{1}{2}(s-a)} \frac{\sin^2 \frac{1}{2}(s-a)}{\sin^2 \frac{1}{2}(s-b)} = 1;$$

so that X, Y, Z lie on a great circle.

QUESTIONS FOR SOLUTION.

15751. *Erratum.*—In Question 15751 (v. *Educational Times* for April, 1905) interchange l and l' in the expression for the reaction at P.

15768. (S. C. BAGCHI, B.A.)—The rate of change of the Massieu-characteristic of a homogeneous mixture due to a small amount of one of its constituents being allowed to diffuse in it is invariative with regard to the proportional increase in the molecular weight of each constituent. (Massieu-characteristic is called by Duhem the “thermodynamic potential at constant pressure.”)

15769. (R. CHARTRES.)—A random point being taken in each side of the triangle ABC, find the mean value of $p^h q^k r^l$, x^n , and $\log x$. Elementary proof required.

15770. (C. E. YOUNGMAN, M.A.)—A sum of money is made up of ordinary coins of the realm, each of as large value and as little frequency as may be consistent with the money being shared as follows by A., B., and C.:—first A. takes a penny and one-third of the rest, then B. a penny and one-third of the rest, then C. likewise, and the remainder they share equally. Then one of them discovers that his coins are worth a shilling each on the average. Find (without algebra) who this is.

15771. (A. HOLM, M.A.)—Find r rational numbers such that, if a given number is added to their sum or to the sum of any $r-1$ of them the results may all be squares.

15772. (R. W. D. CHRISTIE.)—Prove $A^2 = B^2 + C^2$ (integers) when $A = \sum_0^n \{ (m+n)! / [2n!(m-n)!] \} (m \nabla n)$.

E.g., $m = 5, n = 5, 4, 3, 2, 1, 0$; then

$$A = \sum_0^5 (1 + 9 + 28 + 35 + 15 + 1) = 8^2 + 5^2.$$

15773. (Rev. F. H. JACKSON.)—Show that

$$\begin{aligned} \left(1 - \frac{x}{1^3} + \frac{x^2}{1^3 \cdot 2^3} - \frac{x^3}{1^3 \cdot 2^3 \cdot 3^3} + \dots \right) \left(1 + \frac{x}{1^3} + \frac{x^2}{1^3 \cdot 2^3 \cdot 3^3} + \dots \right) \\ = 1 - \frac{3!}{1^3 \cdot 2^3 \cdot 1^3} x^2 + \frac{6!}{1^3 \cdot 2^3 \cdot 3^3 \cdot 4^3 \cdot 1^3 \cdot 2^3} x^4 - \dots \end{aligned}$$

15774. (Professor NANSON.)—If

$$a/(bc - a^2) + b/(ca - b^2) + c/(ab - c^2) = 0,$$

then

$$a/(bc - a^2)^2 + b/(ca - b^2)^2 + c/(ab - c^2)^2 = 0.$$

15775. (J. J. BARNIVILLE, B.A., I.C.S.)—Having

$$u_n + 2u_{n+2} = u_{n+1} + u_{n+3},$$

prove that

$$\begin{aligned} \frac{1 \cdot 2 \cdot 5}{1 \cdot 2 \cdot 3 \cdot 4} - \frac{2 \cdot 4 \cdot 8}{1 \cdot 3 \cdot 5 \cdot 7} + \frac{3 \cdot 7 \cdot 14}{2 \cdot 5 \cdot 9 \cdot 12} - \frac{5 \cdot 12 \cdot 25}{4 \cdot 9 \cdot 16 \cdot 21} + \dots = 0; \\ \frac{1 \cdot 3 \cdot 6}{1 \cdot 2 \cdot 4 \cdot 5} - \frac{2 \cdot 5 \cdot 11}{2 \cdot 4 \cdot 7 \cdot 9} + \frac{4 \cdot 9 \cdot 19}{3 \cdot 7 \cdot 12 \cdot 16} - \frac{7 \cdot 16 \cdot 33}{5 \cdot 12 \cdot 21 \cdot 28} + \dots = \frac{1}{3}. \end{aligned}$$

15776. (Professor HUDSON, M.A.)—Prove that the cusps of the evolute of the focus-roulette of a hyperbola on a straight line are at the same distance from that line.

15777. (Professor COCHEZ.)—On donne $y^2 = z^3$. On demande le lieu des sommets des angles droits circonscrits à cet cubique.

15778. (The late R. TUCKER, M.A.)—AP, AQ are vertical vectors of a parabola. Find the envelope of the circle APQ (1) when AP, AQ are at right angles, (2) when AP, AQ contain any given angle; and find the locus of the centre of the circle in each case.

15779. (Professor SANJANA, M.A.)—Prove, by the elementary geometry of the conic sections, that the sum of the reciprocals of two perpendicular focal chords of a conic is of constant magnitude.

15780. (D. BIDDLE.)—PQ is a chord of a given circle; LOM is an intercept of the ellipse which, having P, Q as its foci, passes through O, the centre of the circle, L, M being on the circumference. (1) Find the position of PQ when the equal triangles PQL, PQM are maxima; and their area, as such. (2) Consider similarly the cases in which the ellipse cuts the circumference in S, T as well, on the opposite side of P, Q, and in which (for the limited range) PQS, PQT exceed in area PQL, PQM, the corresponding triangles previously considered.

15781. (Professor NEUBERG.)—Soit A le sommet d'une parabole. En un point quelconque M de cette courbe on mène une corde MN perpendiculaire à MA. Trouver le lieu du milieu de cette courbe.

15782. (A. M. NESBITT, M.A.)—The inscribed circle of a triangle ABC touches the sides AC, AB in E and F, and an escribed circle touches the same sides produced in E' and F'. If the median AK cut EF in G and E'F' in G', prove that BGCG' is a parallelogram.

15783. (Professor LAUVERNAY.)—Démontrer qu'il existe un triangle

et un seul de forme déterminée, tel que l'orthocentre et le centre de gravité de ce triangle soient sur la circonférence inscrite à celui-ci.

15784. (R. F. DAVIS, M.A. Suggested by Question 15748.)—If ABCD be a quadrilateral whose opposite sides BA, CD meet in E, and any variable transversal EPQ meet AD, BC in P, Q respectively, then $AP \cdot PD/EP^2 : BQ \cdot QC/EQ^2$ is constant.

15785. (Professor NANSON.)—Given the quadric equation of a pair of planes or points, determine the six co-ordinates of their meet or join.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10341. (Professor WOLSTENHOLME, M.A., Sc.D.)—The curve

$$(y^2 + 4ax - 4a^2)^2 = 64a(x + 2a)(x^2 + y^2)$$

is of the fourth degree and sixth class, and has three nodes ($x = -a, y = 0$; $x = -6a, y^2 + 100a^2 = 0$); hence Plucker's equations give us six inflexions and four bitangents (no cusp). Investigate the position and nature of these. [$x \pm iy = 0$ gives $(x - 2a)^4 = 0$, or meets the curve in four coincident points; such a point is equivalent to two inflexions and one bitangent; $a = 0$ gives a similar point at infinity, and $x + 2a = 0$ has real double contact when $y^2 = 12a^2$.]

10423. (D. BIDDLE.)—As a wheel, of radius r , proceeds in a straight line on a level road, at a uniform velocity v , on a still day, a particle of mud is detached from the tire by centrifugal force, and again impinges upon it under the influence of gravity. Disregarding the resistance of the air, find (1) the arc of revolution within which the said particle leaves the wheel in the first instance, (2) the maximum time occupied in the flight, (3) the maximum distance actually traversed (in a terrestrial sense).

10573. (H. W. SEGAR.)—If $z = f_1(y + a_1x) + f_2(y + a_2x)$, prove that the equation $f(c) \cdot r + c \cdot s + t = 0$ cannot have a tac-locus.

10596. (Professor DÉPREZ.)—Soient a, b, c les côtés d'un triangle sphérique ABC; r le rayon du cercle inscrit; x, y, z les distances d'un point de ce cercle aux côtés de ABC. Démontrer la formule

$$\cos \frac{1}{2}A (\sin y \sin z)^{\frac{1}{2}} + \dots = 2hgr \cos \frac{1}{2}A \cos \frac{1}{2}B \cos \frac{1}{2}C.$$

10825. (W. J. C. SHARP, M.A.)—Prove (1), (2), and therefrom deduce (3), (4), where

$$(-1)^m (2 \sin A)^m \sin(mA + B + \frac{1}{2}m\pi) = \sin B - \frac{m}{1} \sin(2A + B) + \frac{m(m-1)}{1 \cdot 2} \sin(4A + B) - \dots \dots (1);$$

$$(-1)^m (2 \sin A)^m \cos(mA + B + \frac{1}{2}m\pi) = \cos B - \frac{m}{1} \cos(2A + B) + \frac{m(m-1)}{1 \cdot 2} \cos(4A + B) - \dots \dots (2);$$

$$\int \sin^m x \sin(m+n)x \cdot dx, \int \sin^m x \cos(m+n)x \cdot dx \dots \dots (3, 4).$$

11843. (J. GRIFFITHS, M.A.)—Let O denote the centre of gravity of a triangle ABC (obtuse-angled, suppose); P_1, P_2 the points of intersection of its circumscribing and nine-point circles; C', C'', C''' the conics which pass through the points $GBCP_1P_2, GCAP_1P_2, GABP_1P_2$; and C'_s, C''_s, C'''_s those which pass through P_1, P_2 and are self-conjugate with respect to the triangles GBC, GCA, GAB respectively. It is required to prove that the nine-point circle in question passes through the other points of intersection of (C', C'_s) ; (C'', C''_s) ; (C''', C'''_s) .

NOTICES TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Rd., West Kensington, W.

Vol. VI. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price to Subscribers, 5s.; Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, April 13th, 1905.—Dr. E. W. Hobson in the Chair.

The following papers were communicated:—

"On Irreducible Jacobians of Degree Six," by Mr. P. W. Wood.

"Ordinary Inner Limiting Sets in the Plane or Higher Space," by Dr. W. H. Young.

"Note on a Case of $F(\alpha, \beta, \gamma, \delta, \epsilon, 1)$," by Rev. F. H. Jackson.

Informal communications were made as follows:—

"Fermat's Numbers and the Converse of Fermat's Theorem," by Mr. A. E. Western.

"On the Strains that accompany Bending," by Prof. A. E. H. Love.

THE PENCILS WITH THE UNBREAKABLE POINTS
Hardtmuth's
KOH-I-NOOR
Pencils

Are First and Best wherever

Pencils are used.

It is nearly a Century since the firm built its reputation on Pencils. To-day all that is known about Pencils goes into the making of HARDTMUTH'S. They are uniform in Economical Working Quality, and are Standard makes in the trade.

LONDON : LONGMANS & CO.

NELSON'S LITERATURE READERS

Edited by Dr. Richard Garnett, C.B.

WITH NUMEROUS ILLUSTRATIONS.

No. I.—296 pages, price 1s. 6d. No. II.—464 pages, price 2s.

For Secondary Schools these books will be found suitable for Intermediate Forms, as they afford an easy and pleasant introduction to the study of special work by the advanced pupils.

The name of Dr. Garnett as Editor is a guarantee that the best authors have been laid under contribution. His unique acquaintance with the treasures of our literature has enabled him to select the best extracts from the best writers, and the result is a school anthology of prose and verse more rich and varied than any hitherto available.

Brief Biographical Notes have been added, giving the essential facts regarding each author represented, and Explanatory Notes dealing with obscure allusions or other difficulties in the selections.

The Appendix contains the principles of English word structure, and lists of the most common English and foreign roots with derivatives.

SOME RECENT PRESS NOTICES.

"A substantial repertory of excellent literary passages of widely varied character."—*Educational Times.*

"The selections are of a much higher class, though not less interesting, than those found in some other modern Readers."—*Secondary Education.*

"Made up of well-chosen extracts from the best English and American authors, from Chaucer to Carlyle . . . The print and format are excellent."—*The Guardian.*

"A wonderful storehouse of selected extracts from standard writers."—*Head Teacher.*

A HEAD MASTER writes:—

"I have had No. I. of Dr. Garnett's 'Literature Readers' in use in my school and am delighted, and have ordered the second book."

A HEAD MISTRESS writes:—

"It is a delightful collection of literary excerpts. I spent a very pleasant couple of hours over its perusal."

Nelson's Royal Geographical Text-Books

These Text-Books aim at being really Geographical. Special attention is given to the physical features and conditions of each country, as explaining the industrial and other facts. For this purpose **Relief Maps** are freely used, as well as **Coloured Maps** and Sectional Maps. They are eminently **helpful** and **teacher-like**, and are intended as companions to the well-known and highly popular **Royal Wall Atlases.**

COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

The next Monthly Meeting of the Members will take place on **Friday**, the 16th of June, at 7.30 p.m., when Professor J. J. FINDLAY, M.A., Ph.D., will read a Paper on "Sir Joshua Reynolds: some account of his contribution to Principles of Method."

A Discussion will follow the reading of the Paper. Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., *Secretary*.

COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

At the Certificate Examinations to be held in June and December, 1905, alternative First Class papers will be set on Theoretical and Practical Geometry, in accordance with the Syllabus for the Cambridge Local Senior Examinations.

C. R. HODGSON, B.A., *Secretary*.

COLLEGE OF PRECEPTORS.— EXAMINATIONS, 1905.

1. **DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the **29th of August, 1905**.

2. **PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.**—The next Practical Examination will be held in **October, 1905**.

3. **CERTIFICATE EXAMINATIONS.**—The Midsummer Examination for Certificates will commence on the 27th of June.

4. **LOWER FORMS EXAMINATIONS.**—The Midsummer Examination will commence on the 27th of June.

5. **PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The Autumn Examination in 1905 will commence on the 5th of September.

6. **INSPECTION AND EXAMINATION OF SCHOOLS.**—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

PRIZES.

Diploma Examination.—The following Prizes will be offered for competition:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5. The Doreck Scholarship of £20 will be awarded on the results of the Christmas Examination.

Certificate Examination.—Prizes will be awarded as follows, subject to the conditions stated in the Regulations:—

First Class.—Four Prizes for General Proficiency; two each for Classics, Mathematics, Modern Languages, Natural Sciences, and English subjects; one for Scripture History.

Second Class.—Four Prizes for General Proficiency.

Third Class.—Four Prizes for General Proficiency. Two Medals will also be awarded to the best Candidates in Shorthand.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary*.

PROFESSIONAL PRELIMINARY EXAMINATIONS.—

The COLLEGE OF PRECEPTORS will hold an Examination for Certificates recognized by the Board of Education, the Incorporated Law Society, the General Medical Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, and other bodies, on the 5th, 6th, and 7th of September, 1905.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool, Manchester.

Examination Fee, 25s. Regulations and Entry Forms may be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary*.

COLLEGE OF PRECEPTORS.— (BLOOMSBURY SQUARE, W.C.)

The following persons who have passed the College of Preceptors Examinations for Diplomas are requested to communicate with the Secretary of the College:—

Licentiatees:—Miss M. R. B. Allnutt, Messrs C. E. Beer, W. E. Bond, W. Cormack, H. W. H. Dobbins, C. G. J. Hill, F. Simmons, M. H. Wild.

Associates:—Messrs. J. F. Alder, J. H. Armitage, E. W. Ash, G. T. Aston, A. H. Baker, J. Benbow, T. A. W. Blower, A. F. Bryan, J. Buckley, L. J. Calway, C. E. Carpenter, R. D. Chalke, A. H. Cook, A. J. Coy, J. Deacon, A. Eady, B. E. Elderkin, S. C. Evans, H. T. Farmer, G. W. Gentleman, J. George, W. H. Goble, T. Gordon, B. Greaves, J. Griffiths, H. Hansford, H. Harris, G. H. Haslam, W. G. Haughton, W. D. Henderson, S. A. Hildage, J. Holford, D. C. James, G. H. Job, G. H. Johnson, C. W. C. Jupe, D. Lindow, J. A. Ludlow, J. Marley, G. Matthews, D. L. Norris, G. Newburn, A. J. Pascoe, J. C. Poole, F. E. Poulton, W. H. Pye, R. Rage, G. W. Raper, A. B. Riley, J. Robinson, H. T. Saturley, T. F. Shearer, G. F. Smith, G. H. Southern, A. W. Stace, J. H. Thornhill, H. Tilbury, J. B. Tomlinson, T. H. Turner, G. T. Vine, E. Webster, J. J. Willetts, J. W. Wood; Misses A. S. Booth, A. B. Collingwood, I. M. Gaylard, E. Gray, A. Greentree, A. G. Hansford, E. Hebblethwaite, A. Hotham, F. E. Hubbard, L. Littlewood, S. Mare, M. M. Neal, E. B. Nowell, H. N. Rees, A. E. Rickaby, H. Smith, A. B. Ugalde.

C. R. HODGSON, B.A., *Secretary*.

UNIVERSITY OF ST. ANDREWS.

REGISTRATION OF TEACHERS.

The Board of Education have made the following addition to Appendix B of the Teachers' Registration Regulations:—"A Certificate of the University of St. Andrews, granted under the conditions regulating the L.L.A. Diploma Examinations, and bearing either that the holder has obtained Honours in at least two of the subjects classed under Departments A, B, C of the L.L.A. Diploma Scheme of Examination; or, that the holder has obtained at least a pass in each of two Languages (other than English) and in Logic or Mathematics."

ST. GEORGE'S TRAINING COLLEGE FOR WOMEN TEACHERS

provides a Course of Professional Training in preparation for Work in Secondary Schools or in Families.

The Students attend the University Lectures on the Theory, History, and Methods of Education, and have systematic practice in Class Teaching in Schools.

Two Bursaries of £30 are offered to Graduates entering in October.

Apply for further particulars to the Principal, Miss M. R. WALKER, 5 Melville Street, Edinburgh.

LONDON COLLEGE OF MUSIC. (Incorporated.)

GREAT MARLBOROUGH STREET, LONDON, W.

Patron: HIS GRACE THE DUKE OF LEEDS.

Dr. F. J. KARN, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATIONS in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 350 Provincial Centres in JULY (JUNE for Scotland and Ireland), when certificates will be granted to all successful candidates.

The Higher Examinations in Practical and Theoretical Music for Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma, L.C.M., and Fellowship (F.L.C.M.) take place in JUNE, JULY, and DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.

Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1905 may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best professors at moderate fees. Day and Evening Classes are held.

A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEEKES HOLMES, *Secretary*.

THE ASSOCIATED BOARD OF THE

ROYAL ACADEMY OF MUSIC AND THE ROYAL COLLEGE OF MUSIC

FOR LOCAL EXAMINATIONS IN MUSIC.

Patron—HIS MAJESTY THE KING.

President—H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS held in Theory subjects at all Centres in March and November; in practical subjects at all Centres in March and April, and in London and District in November and December also. (See Syllabus A.)

SCHOOL EXAMINATIONS, held three times a year—viz., March and April, June and July, and October and November. (See Syllabus B.)

Specimen Theory Papers for past years (Local Centre and School) can be obtained on application to the Central Office. Price 3d. per set, per year, post free.

The Board gives annually Six Exhibitions tenable for two or three years.

Copies of Syllabuses A and B, and all information, will be sent on application to

JAMES MUIR, *Secretary*.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A., LL.D.

The Session began October 4th, 1904. The College Courses are arranged with reference to the Degrees of the University of Wales, and include most of the subjects for the B.A. and B.Sc. Degrees of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional Fee for Ordinary Arts Course, £11. 1s.; Ditto for Intermediate Science Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students in Upper Bangor. Fee, Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than Twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses, apply to

JOHN EDWARD LLOYD, M.A.,
Secretary and Registrar.

ROYAL HOLLOWAY COLLEGE FOR WOMEN.

(UNIVERSITY OF LONDON.)

ENTRANCE SCHOLARSHIPS.—Ten Entrance Scholarships from £50 to £60, and several Bursaries of £30, tenable for three years at the College, will be awarded on the results of an Examination to be held from July 3rd to July 8th, 1905. Names must be entered before June 1st. The College prepares Students for London Degrees and also for Oxford Honour Examinations. Inclusive fee, £90 a year.

For forms of entry and further particulars apply to the SECRETARY, Royal Holloway College, Englefield Green, Surrey.

CHERWELL HALL, OXFORD.

A TRAINING COLLEGE FOR WOMEN TEACHERS.

A RESIDENTIAL COLLEGE providing a year's Professional Training for Secondary Teachers.

The Course includes preparation for the Oxford Teachers' Diploma and the Cambridge Teachers' Certificate, and the Teachers' Diploma of the University of London.

For instruction in the Theory and History of Education, the Students attend the Lectures of the University Reader in Education. The practical work in Teaching in Schools and Demonstration Lessons, &c., is under the supervision of the Principal and Staff of the Hall.

Particulars as to qualifications for admission, Scholarships, &c., may be obtained by application to the Principal, Miss MACKENZIE-SMITH, Cherwell Hall, Oxford, or the Hon. Sec., Miss MARGARET BERNARD, Birchy Hill, Sivy, Hants.

THE CARNEGIE DUNFERMLINE TRUST.

COLLEGE OF HYGIENE AND PHYSICAL TRAINING.

A COLLEGE for the Training of Teachers of HYGIENE and PHYSICAL TRAINING will be OPENED on the 26TH SEPTEMBER next, under the auspices of the Carnegie Dunfermline Trust.

The course of study will extend over two years, and will include Hygiene, Anatomy, Physiology, Educational and Remedial Gymnastics on the Swedish system, Games, Swimming, Dancing, &c.

A Residence for Women Students will be opened at the same time under the superintendence of Miss E. ADAIR ROBERTS.

A specially qualified Medical Man will devote his whole time to the work of the College.

TERMS, for Residence and Tuition, £80 per annum. For particulars, apply to the Principal, Miss OGSTON, Physical Training College, Dunfermline, Scotland.

HARTLEY UNIVERSITY COLLEGE, SOUTHAMPTON.

Principal—S. W. RICHARDSON, D.Sc., B.A.

A SUMMER COURSE OF BOTANY, for Teachers and others, will be held at the above College, July 31st to August 13th, 1905. This Course, which will consist chiefly of practical work in the Botanical Laboratory of the College, with field excursions, will be conducted by Professor CAVERS, D.Sc. (Lond.), F.L.S.

Fee for the Course, 15s., payable in advance to the Registrar of the College, Mr. D. KIDDLE, from whom full particulars may be obtained on application.

BEDFORD COLLEGE FOR WOMEN

(UNIVERSITY OF LONDON.)

YORK PLACE, BAKER STREET, W.

A Reid Scholarship in Arts, annual value £51. 10s. first year, £28. 7s. second and third years, and an Arnott Scholarship in Science, annual value £48, both tenable for three years, will be awarded on the results of an Examination to be held at the College on June 28th and 29th. For further information apply to the PRINCIPAL.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Students are admitted to the Training Course in October and January.

Two SCHOLARSHIPS, each of the value of £10, will be awarded for the course of Secondary Training beginning in October, 1905.

Applications should reach the HEAD OF THE TRAINING DEPARTMENT not later than July 7th, 1905.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss H. L. POWELL,

late Scholar of Newnham College (Hist. Tripos, Class I.), late Head Mistress of the Leeds Girls' High School.

A residential College providing a year's professional training for Secondary Teachers.

The course includes preparation for the Cambridge Teacher's Certificate (Theory and Practice), and for the Teachers' Diploma of the London University. The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers. Ample opportunity is given for practice in teaching science, languages, mathematics, and other subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

DATCHELOR TRAINING COLLEGE FOR TEACHERS.

CAMBERWELL GROVE, S.E.

Principal—Miss RIGG.

Mistress of Method—Miss CARPENTER.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, Private Schools' Association, and Welsh County Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss ALICE M. FOUNTAIN.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Head Mistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 5.30 p.m.

Hours for interviews—10.30 a.m. to 1 p.m., and 2 p.m. to 5 p.m. Saturdays until 3 p.m.

JOINT AGENCY FOR ASSISTANT MASTERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

Telegrams—"Educatorio, London."

Low Commissions. Liberal Discount.

Head Masters having vacancies on their staffs, and Assistant Masters seeking appointments, are asked to communicate with the REGISTRAR.

Office Hours—10 a.m. to 5 p.m.; Saturdays, 10 a.m. to 1 p.m. Interviews generally between these hours or by special appointment.

UNIVERSITY OF LONDON.

GOLDSMITHS' COLLEGE, NEW CROSS.

DEPARTMENT FOR THE TRAINING OF TEACHERS.

In view of the opening of the above Department in the latter part of September next, Teachers (Men and Women) of the various subjects included in the Scheme of Studies will shortly be appointed.

The Scheme includes both General Education and Professional Instruction.

The majority of the salaries will be between £150 and £250 a year, but higher or lower salaries may be paid in exceptional cases.

Applications must be received not later than Saturday, June 17th, 1905.

Particulars may be obtained from the WARDEN, Goldsmiths' College, New Cross, S.E.

BANGOR NORMAL COLLEGE FOR THE TRAINING OF SCHOOLMASTERS FOR ELEMENTARY SCHOOLS IN WALES.

(Conducted on the principles of the British and Foreign School Society.)

APPOINTMENT OF PRINCIPAL.

The Committee of Management will shortly proceed to appoint a PRINCIPAL to the above Institution. Candidates must be University Graduates, and must be qualified to take part in the professional training of the students. They are also requested to state what other subjects included in a Training College curriculum they would be prepared to teach.

Salary £350 per annum, rising by increments of £25 every two years until it reaches £500.

Applications, with 50 copies of not more than five recent testimonials, should be sent not later than June 7th, 1905, to the SECRETARY, to whom also all inquiries for further information should be addressed.

Canvassing among the members of the Committee will be regarded as a disqualification.

REV. DANIEL ROWLANDS, M.A.,

Normal College, Bangor.

Secretary.

GEORGE GILL & SONS, LTD.,
WARWICK LANE, LONDON, E.C.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

[FOUNDED 1829.]

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice-President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

THE WHOLE OF THE PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, **£4,194,485.** Annual Income, **£398,982.**

Bonuses Distributed, **£3,723,720.**

The ANNUAL PREMIUMS are LOWER THAN THOSE USUALLY CHARGED.

Under the "REDUCED PREMIUM" system—applicable to Whole-Life and Endowment Assurances—only FOUR-FIFTHS of the ordinary Annual Premium is payable, the other one-fifth remaining a debt to be repaid out of Bonus.

Notwithstanding the LOWNESS of the Premiums charged, the BONUSES are on an EXCEEDINGLY HIGH SCALE. For the twenty years ending May, 1901, the Bonuses distributed were equal to an average Cash Return of no less than 45 per cent. of the Premiums paid.

The CONDITIONS OF ASSURANCE are most favourable, and SURRENDER VALUES, PAID-UP POLICIES, and LOANS ON DEPOSIT OF POLICIES are all on an exceedingly liberal scale.

IMPORTANT NOTICE.

No Agents employed and No Commission paid for the introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office.

PERSONS QUALIFIED FOR MEMBERSHIP:—

1. Any Clergyman of the respective Churches of England and Ireland, or of the Episcopal Church in Scotland.

2. The Wife, Widow, Child, Grandchild, Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, Niece, Grandnephew, Grandniece, or First Cousin of any such Clergyman.

3. The Father, Mother, Brother, Sister, Uncle, Aunt, Nephew, or Niece of the Wife or Widow of any such Clergyman.

4. The Wife or Widow of any Son, Grandson, Brother, or Nephew, or the Husband or Widower of any Daughter, Grand-daughter, Sister, or Niece of any such Clergyman.

5. Any Person holding any permanent appointment under the Society.

Any person qualified as above may effect an Assurance on his or her own Life, and also for his or her own benefit on the Life of any other person, provided he or she has an interest in such Life to the extent of the sum to be assured.

Any person not thus qualified may effect Assurances on the lives of persons who are themselves qualified.

The Rules of the Society also empower the Directors to grant Assurances on the lives of certain persons not qualified as above. (*See Prospectus.*)

MR. TRUMAN'S EDUCATIONAL AGENCY,

6 HOLLES STREET, CAVENDISH SQUARE, LONDON, W.

TELEGRAMS: "TUTORESS, LONDON."

TELEPHONE No.: 1167 MAYFAIR.

A.—EMPLOYMENT DEPARTMENT.

Mr. TRUMAN introduces (1) University, Trained, and other qualified English and Foreign Lady Teachers to Public and Private Schools (Girls' and Boys'); (2) English and Foreign Governesses to Private Families; and (3) Lady Matrons and Housekeepers to Boys' and Girls' Schools.

No charge is made to Principals, and the terms to Teachers and other ladies seeking appointments are reasonable, no charge being made unless an engagement be secured through this Agency.

B.—SCHOOL TRANSFER DEPARTMENT.

Mr. TRUMAN undertakes the negotiation of School Transfers and Partnerships, and assists ladies seeking School Premises. No charge is made to Purchasers.

C.—PUPILS' DEPARTMENT.

Mr. TRUMAN has organized a special Department for the introduction of Pupils to Schools and other educational establishments. No charge for registration.

Any negotiations entrusted to Mr. TRUMAN will receive his prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

The Educational Times.

The Grooves of Change.

THE bewilderment of educational opinion depicted by Dr. Hayward in his lecture at the College of Preceptors, which we print

elsewhere in our present issue, can scarcely be regarded with surprise. After a period of somnolence or listlessness, one is apt to find things in arrear and in confusion, and the educational slumber in this country has been both prolonged and deep. Even when one excludes opinions that have no substantial claim to serious consideration, opinions formed on an inadequate basis or under patent bias, opinions expressed in lax or misleading terms, there will still remain contradictions and divergences of fundamental import. Indeed, Prof. Sadler tells us frankly that "there is no single educational formula in which at present we can implicitly believe." This cannot but be somewhat disquieting, however natural it may be as a penalty for long neglect, or, let us say, for easy acquiescence in the traditions of the elders. The only course is to set about recovering lost ground. The bounds of knowledge have been made wider and wider yet; the extension of human knowledge has deeply impressed the habits of mind of the people and the social interrelations of the community; and educational methods and traditions accordingly call for readjustment to the new conditions. The new order, material and intellectual, demands a suitable educational response. The movement is a continuing one; and so it is useless to look for finality in the educational system. "It is impossible," says Prof. Sadler, "to foresee what will be a generation hence the normal course of secondary education in our English schools." Unquestionably so. And, after all, is an absolute unification of educational theory either possible or probable? The facts of life and society do not encourage a favourable anticipation. Granting the claims of Herbart on Dr. Hayward's fullest statement, one cannot hope that even then the last word has been said. Education is of the nature of an inexact science, and there will always be room for honest and substantial differences. The practical man will utilize the current agreements in relation to the current materials and surroundings.

The foregoing quotations from Prof. Sadler are taken from his "Report on Secondary and Higher Education in

Derbyshire," a very thorough-going document—or rather volume—just issued by the Education Committee of the county of Derby, and fully rivalling his great Liverpool report. On a detailed inquiry at a couple of dozen centres, he sets forth "the best mode of developing a complete and satisfactory system" for the particular county. So far as local matters are concerned, we leave the Report to the wisdom of the Education Committee, congratulating them on its painstaking, penetrating, lucid, and suggestive character. But Prof. Sadler always works on principle, and his references of details to principles throughout the investigation ought to be extremely instructive to other educational bodies and interesting to educationists generally. We have just seen how uncertain in his view are the bases and the lines of educational advance, and how little disposed he is to legislate out of hand for any but the nearest years. He follows the wise practical course of "retaining every educational instrument of tested value," while watching for the time when we shall "reach the point at which we can say that the courses of study in secondary schools have successfully adjusted themselves to the new needs of modern life." The practical inference he draws from the situation is this:

That, instead of hurriedly multiplying secondary schools with more regard to the number of pupils to be attracted to them than to the quality of the training and instruction which modern needs make it expedient to devise and provide, the more prudent course will be to concentrate effort on getting a sufficient number of secondary schools into a high state of efficiency (developing existing schools where circumstances allow, but establishing new ones when necessity requires), on staffing these schools with very competent teachers, and on encouraging them to make various experiments in curricula and in methods of teaching.

Prof. Sadler expressly says that he has "endeavoured to bear constantly in mind the importance of bringing education into close touch with the real needs of life"—a modern view that colours deeply the whole of his statement and recommendations, and peremptorily bars the possibility of finality. Needs differ in different places, even in the same county; and the educational arrangements must be adjusted to them in the ways most suitable in the several cases at the particular time. All this points to the urgent necessity of variety and flexibility of system. The same idea is involved in the stress laid upon the making of "various experiments in curricula and in methods of teaching." But, Prof. Sadler insists, "the essential thing in all educa-

tion is not the quickening of the wits, but the strengthening of the character; its benefits depend on the quality of its moral and intellectual influence, not simply on the quantity of its provision"; and, accordingly, "the most indispensable factor in it is the personality of the teacher." While a complete, consistent, and universally accepted theory of education is being worked out, "we are bound to act"; and, given able, instructed, trained, and sensible teachers, the practical results will not be amiss, and very probably experience will aid the formation and acceptance of the theory of the future.

In brief, Prof. Sadler advises a great improvement of the elementary schools in the industrial districts, a liberal provision of higher-grade schools of a new type, and an adequate supply of secondary education at a limited number of centres, accessible (by means of scholarships) to boys and girls of exceptional promise throughout the county. Here, in the very nature of the circumstances, emerges an unfortunate limitation on secondary education: the children must go to a centre. In the north-eastern counties of Scotland, under the old parish school system, it used to be the pride of the schoolmaster to send his best boys direct to the University; and, even under the more exacting conditions prevalent during the past generation, many a schoolmaster does so still. But then the achievement depends upon the exceptional ability and the professional pride of the schoolmasters specially encouraged by the Dick and Milne Bequests. This is a striking testimony to the richness of the returns from a fairly liberal treatment of teachers. However, Prof. Sadler goes across the Border for one important suggestion. For certain districts of Derbyshire—as well as for "many other parts of England"—he recommends strongly "a new type of higher-grade school, organized on lines not unlike those which have proved successful in Scotland," and providing a course extending over the three years from twelve to fifteen. The details of the course are very well worth study. In the first two years it would be general; in the third year it would be divided into two, three, or four branches, according to the needs of the district—a general course, an industrial course (for boys only), a commercial course, and a domestic course (for girls only)—all the courses, however, including hygiene, class singing, and physical training. The general course of the first two years has for its central factor "thoroughly good teaching in English," with a view to develop clear thought and expression, and "to give the children a love of good literature, and to encourage private reading, and, through the teaching of history, to develop in them a sense of civic and national duty." With the usual subjects are included handicraft exercises, Nature study, and French "taught on the best modern methods, e.g., as far as possible in the language itself, though with careful regard to grammatical accuracy." The education would not be cheap indeed: "from £8 to £10 a head," apart from interest on expenditure on sites and building; and "towards this outlay the Government grants offer but a meagre contribution"—"wholly insufficient to provide instruction of the quality required in good schools of the higher-grade type." But Prof. Sadler reasonably hopes "that the Board of Education may see its way to extend its present Higher Elementary

School Minute on the more liberal lines already adopted in Scotland." Meantime, the thing is for Local Education Committees to find out exactly what their real needs in different districts are, and to work in these directions as best they may. The Board of Education must move cautiously; but it does move. The particulars of the suggested type of school will reward study in the Report itself: what we are more specially concerned to note is the effort to adapt the education to the conditions of the locality, to secure excellence of quality, and to give a large freedom both to Authorities and to teachers.

One other point. "In the spring term, 1904, nearly one-third of the pupils receiving secondary education within the area of the Administrative County of Derby were in schools under private management." More than half the girls were in private schools. Hence, obviously, "it seems desirable that the County Education Committee should consider how far it is in their power to encourage and recognize efficiency in the private schools." Prof. Sadler suggests the formation of a county directory of secondary schools of recognized efficiency, guaranteed by inspection (two-thirds or three-quarters of the cost to be paid by the Education Committee); full details of the organization, equipment, &c., of each school being set forth. He thinks that county scholarships should be open to pupils from recognized private schools; and that "in some cases county scholarships might be tenable at suitable private schools." Moreover, "it would be advisable for the County Education Committee to make loans of small reference libraries, of educational apparatus, and of maps and pictures for school use, to recognized private schools."

The general aim would be to help all the deserving schools in the county to rise to a high level of educational efficiency. Competent private effort is a valuable supplementary factor in national education. It can give much which parents rightly value. It is a safeguard against undue uniformity in educational organization. It gives scope to many excellent teachers, who work better on their own responsibility than within the framework of an organized system. It provides an opportunity for educational experiment—an opportunity which, though by no means always used, is taken advantage of by many teachers to whom we owe salutary innovations in educational methods.

"It is desirable," of course, "to take steps to differentiate efficient private schools from the inefficient, and to enable parents to discriminate between them." Here, then, is a weighty testimony to the value of well conducted private schools, to which not only the Derbyshire but all other Education Committees will do wisely to give heed.

NOTES.

PROF. CHURTON COLLINS, in the most elaborate and energetic article in the new *University Review*, is also concerned that educational matters are cut of joint. "We want now direction, consolidation, system." But "we shall not get them from Academic legislators"—"from the upholders of a narrow esotericism": of that he is thoroughly persuaded. "With our Academic legislators, the chief aim is to impart knowledge, to cram the mind with facts, without reference either to the practical value of the information acquired, or the educational value of the system and methods employed in imparting it." What could be "more ridiculous," for

example, than the present regulations of London University for instruction on the side of Literature? "If they had been drawn up with the special intention of reducing cramming to a science, they could not have attained their object more effectually." What then? This:

What we want now is a clear conception of what ought to constitute civil liberal education, of the ends at which we should aim, of the means by which those ends may be best attained. And can there be any doubt about either? That the ends are æsthetic, moral, and political instruction and culture, the means Literature, Philosophy, and History, rationally and intelligently defined and interpreted? That by Literature should be understood the best poetry, the best rhetoric, the best criticism, the best of what is comprised in *belles lettres*, to be found in the world; by Philosophy, not those departments of it which are polemical or esoteric and abstrusely technical, but where it bears directly on conduct and life; by History, neither mere antiquities nor mere chronicles, but philosophy, as Dionysius has so finely described it, teaching by example:

In a word, a glorified, but limited, Extension Lecture system; or, in other words, "education in the sense in which it was understood by Plato, by More, by Matthew Arnold, and by Jowett." We should not be surprised if this solution, too, were set down as "Academic legislation," and "narrow esotericism." How many of Dr. Hayward's difficulties will it remove or relieve?

THE rise of salaries in "the London Service" will be very welcome to the large number of elementary teachers under the London County Council. Very properly the conditions are to apply equally in all the schools, provided and non-provided. The encouragement of academic qualifications is a wise inspiration: an additional £10 a year for every teacher entering the service with a University degree or obtaining one within four years. The rise may not be very great in detail, but on a narrow margin every little helps, and helps considerably. The aggregate looks sufficiently formidable to the ratepayer, but the individual burden is insignificant, and it will not be grudged by any intelligent person. How far the movement is due to appreciation of the work of the teachers, and how far to the increased competition of country places, need not be particularly examined. Better salary means better work, and that is the essential matter. The pecuniary distinction between men and women doing substantially the same service is naturally a sore point with the women, or with some of them, and with champions of women's interests. It is a complex question, which does not seem to be squarely faced on grounds of principle, but to be decided on a more or less liberal treatment of traditional opinion.

No doubt the town of Bradford, under the enlightened guidance of the Mayor, Mr. Alderman Priestley, will give the other Yorkshire towns an excellent example in supporting the University of Leeds. The Conference at Bradford, attended by Lord Ripon, Mr. A. G. Lupton (Pro-Vice-Chancellor), and other representatives of Leeds University, was of the most harmonious, and even enthusiastic, character. If not numerically large, it was widely representative and influential. Yorkshire cannot fail to be moved, not only by the solid merits of the case, but also by the splendid challenge of the neighbouring county of Lancaster; and Bradford, which gave valuable support to the Yorkshire College in its early days, may be counted on to stand by the institution in

its new development. "One thing," said Lord Ripon, "would be fatal to the objects of higher education, to the interests of this great district, and to the honour of Yorkshire: that you should be contented with having a starved institution calling itself the Yorkshire University." The cordial response of the Mayor indicates that such a fatality is not likely to be in store for Yorkshire. Mr. Lupton stated that less than one-fourth of the 842 registered day students of the university belong to Leeds—a fact that should appeal with decisive effect to the people of the university area, and first and foremost to Bradford.

ALTHOUGH the Provost scouts his figures as "absolutely inaccurate," Mr. Swift MacNeill, M.P., persists in declaring that "a full and searching investigation into the administration and distribution of the revenues of Trinity College, Dublin, is urgently required." He thinks that such an investigation should lead to legislation providing that the revenues of the College, "one-third of which is absorbed by eight individuals"—the Provost and Senior Fellows—"should no longer remain a State prize for a small exclusive class of the community, but should be made available for the higher education of the nation at large, and more especially for the education of youths from districts that for three hundred years have been paying away enormous sums to Trinity College, Dublin, without any return whatever." The language seems somewhat loose: the Senior Fellowships, we believe, are open to Irish intellect without restriction, and the return is not so blank as stated. Still, it is a very serious point that one-third of the revenues of the College—say £18,000 a year—should be "absorbed by eight individuals," however accomplished, unless their scholarship, or other academic activity, be signally productive—which, notwithstanding the conspicuous distinction of certain of the Senior Fellows, it can hardly be said to be. The calculation, indeed, includes in the £18,000 "the cost of administration." The Registrar and the Bursar, at any rate, must be so far worthy of their hire, and probably the Provost exercises some not unimportant functions. But, even so, the figures do seem to invite criticism and inquiry. They may be to some extent inaccurate, but "absolutely" is a strong word; and an average of at least £2,000 a year to each of the fortunate Eight is big enough to call for justification, or else (if possible) rectification.

In his Review of General Legislation in the United States for 1904 (published by the New York State Education Department), Dr. Andrew S. Draper, Commissioner of Education of the State of New York, remarks that "nearly all—perhaps all"—of the 126 different enactments of the year "manifest a disposition to bring to the people the advantages of the educational system where it has reached its best development, and many show popular determination and legislative grasp which are breaking out the highways of educational progress." "One can hardly examine the subject without being surprised and gratified at the extent of legislation which proves a decisive and a widening advance of educational purpose and confidence in the Southern

States." Appropriations made to education elsewhere than in Bills with educational titles "were large beyond precedent."

Casting a glance over the general field, one may safely say that the legislation of the year indicates not only a new measure of quickened and intelligent popular interest in education, but also a determination to exercise the political power of the masses for educational upbuilding. This is relating education to the industries, and, happily, it is being done with a better recognition of the telling influence of the higher learning upon the mechanical and agricultural vocations. There is clearly a universal movement in the country towards a comprehensive educational system which shall recognize every condition in life, every form of intellectual activity, every phase of labour depending upon skill, which shall assure every one his fair chance, and which shall perceive that the true greatness of the nation depends upon public policies which make all that can be made, industrially, intellectually, and so morally, of every individual unit.

MR. CARNEGIE is still labouring to avoid the calamity of dying a rich man. His £100,000 to the University of Virginia is but an incidental mite. He has established a fund of the princely amount of two millions sterling to provide retiring allowances for professors overtaken by old age or other physical disability incapacitating them for work. The benefits of the fund are open to all universities, colleges, and technical schools in the United States, Canada, and Newfoundland, without distinction of race, colour, or creed, except that State, Colonial, and purely sectarian institutions are on principle excluded. This seems to us one of the wisest of all Mr. Carnegie's educational endowments. The project has, of course, been subjected to genial criticism. "Is it altogether wise, in this money-grubbing age," asks a contemporary, "to dangle such rewards before the eyes of men who, to do them justice, have hitherto shown remarkable indifference to money, and have worked with infinite devotion in the cause of science and scholarship for honour and distinction only?" Our contemporary should have figured out the probable amount of the dangled rewards, and reflected whether men that have spent their strength, not in money-grubbing, but in single-minded devotion to science and scholarship, we will not say for "honour and distinction," but for the cause of truth and progress, should be left in their disablement to the generosity of friends or to public charity. What of the whole system of official pensions on the top of "honours and distinctions"?

SUMMARY OF THE MONTH.

THE East Ham "revolt" is at an end, the Council having rescinded the refractory resolution. There was no discussion, out of respect for Mr. Effingham, who died suddenly in the corridor of the Council Chamber immediately after moving the rescission. An amendment that a town's meeting should be called on the subject was lost by 17 votes to 4, and the motion was carried by 12 votes to 7.

THE education motion at the Newcastle meeting of the National Liberal Federation was submitted by Dr. John Massie:

That this Council, reaffirming its previous declarations on the education question, declares that no settlement can be permanent or satisfactory which does not secure a national system of education based on effective popular control and management, and freed from religious tests and sectarian influences.

Dr. Massie said he did not think a policy of secular education could be carried at the present time, though he was in sympathy with it. He doubted too, whether secular education, though it was just, would become a final settlement: it was not final in

the colonies, nor in the United States. The objection to simple Bible teaching was begotten out of the schismatic contention that there was no common religious ground between the Church of England and the Nonconformists. Sir Henry Campbell-Bannerman said the Liberal party would never rest until the country had an education system that deserved to be called national, and that would have no exclusive effect upon those engaged in the noble profession of teaching.

THE London County Council is raising the salaries of teachers in "the London Service." The head teachers in schools of the first grade, containing accommodation up to 200 scholars, are to receive salaries not exceeding £210 (men) and £160 (women). In the second grade, with accommodation ranging from 201 to 400, the salaries of the male head teachers begin at £200 and increase by £10 instalments to £300. The women start at £150, and increase by £8 a year to £225. In schools of the third grade, where the accommodation is above 400, the commencing salary is £300, and the maximum £400 for men, while for women it is £225 and £300. Where there is a combined or mixed school under one head the salary may go up to £500. Additional sums will be given in certain specified cases. In the case of the non-provided schools there will be an additional expenditure in the year 1905-6 of £19,000, and in 1909-10 of £69,000. In the London County Council schools the increase this year will be £39,500, and five years hence £146,000.

Much discontent exists among the teachers. It is recognized that the commencing salaries are considerably in advance of those paid under the School Board régime, but they are not to come into full operation until August 1, 1907, and the increments are considered unreasonably small. The women teachers have held a conference, and were unanimous in protesting against their salaries being based on a lower scale than those of men of the same qualifications.

WRITING to the *Times* (April 25) to endorse, and to a certain extent to supplement, a letter from Sir G. Bartley, Sir H. Kimber, and other public men, Mr. H. W. Eve remarked:

Not only do their objections to the policy of giving secondary education to all comers below cost price appear convincing, but such a policy is economically unsound. A few figures will show this. The minimum cost of efficient secondary education is estimated at about £15 per head per annum. If the fee charged is £10, there remains £5 to be made up from some other source. If there be a small endowment of, say, £500 a year net, this will suffice for 100 pupils. Every additional pupil will involve a loss or a reduction of efficiency in the shape of inadequate staff or underpaid teachers. If the deficiency is made up out of the rates, it will be difficult to convince the public that a thriving school involves a greater drain on their purse than a stagnant one. It would be interesting to investigate the experience of some of the revived grammar schools, in which the Charity Commission has fixed an unremunerative fee—often, no doubt, in place of an infinitesimal one or of no fee at all.

Again, the policy against which your correspondents protest involves the grave question whether the continued existence of private schools for day scholars should be possible or not. Boarding schools stand on another footing. The recent Regulations of the Board of Education exclude private schools, as has always been the case, from participation in any grant, and it is at least likely that Local Authorities will follow suit. If, therefore, they are also to be undersold by municipal schools, their case is a hard one. They have long formed a useful part of our educational machinery, and it does not seem to be beyond the reach of statesmanship to find a place for them in a reorganized system. Judicious inspection and control can secure efficiency, unsectarianism, and the adequate payment of assistants as easily in a private school as in one under public management, at least if it has the power of the purse behind it, and the head masters of private schools welcome inspection and are mostly glad to learn.

The Council of the College of Preceptors has lately been making inquiries about the local working of the Education Acts and their probable effects on private schools. They find at present but little complaint of injury suffered, but a good deal of apprehension as to the future. Local Authorities, it seems, do not in all cases make a "preliminary survey" of the educational resources of their district, nor do they, except in a very few cases, show much disposition to look upon private schools as forming part of those resources. One Borough Council, in its scheme, makes a point of not underselling existing schools, but this appears to be quite an exception.

THE Scotch Education Department has issued the following Memorandum:—In view of the probable early conclusion of an arrangement with Prussia similar to that now subsisting with

France, the assistant secretary, Scotch Education Department, will be glad to receive before June 15, applications from suitable candidates for employment in schools in Prussia, and, before July 15, applications from managers for duly qualified German-speaking assistants on the footing described in their lordships' circular letter dated February 1, 1905, with reference to the employment of French-speaking assistants.

THE *Morning Post's* special correspondent, discussing (May 19) the Treasury grants for university education, would like to see the Board of Education (and not a permanent advisory body, as proposed by the University Colleges Committee) entrusted with the allocation, "because the Board of Education would in the nature of things regard university education as part of the whole national system."

The country will never get intelligent and effective national control over its expenditure on university education until the Board of Education is entrusted with powers to determine the conditions of these grants in aid. What other body is competent to determine the minimum age of admission to a university course? It is mainly upon that point that the control exercised over the £100,000, whether by an *ad hoc* advisory body or by the Board of Education, should be concentrated. Moreover, we believe that the older universities will before long find it necessary to appeal to the nation for funds in aid. Some of those who were most disappointed by the recent decision of the Senate at Cambridge to maintain compulsory Greek feel that their only remedy against the forces of obstruction which are periodically recruited from the whole country to defeat reforms which many of them are not capable of understanding lies in some measure of Government interference to be purchased by financial aid. It is an obvious anomaly that the two most important universities in the country should get no portion of the £100,000 a year which the nation will probably devote to the assistance of university education, and equally, if less obviously, an anomaly that national control should direct the education system as far as the higher technical or higher secondary school, but no farther. Control over the standards of matriculation at Oxford and at Cambridge would be purchased cheaply by the Government at a price of £20,000 a year to each of them. For what is needed for the development of university education in this country is a standard of admission to that grade of education which shall be at once uniform and elastic. Only a central authority like the Board of Education can determine and enforce such a standard.

The *Morning Post* editorially agrees that the State contribution should be largely increased, and that Oxford and Cambridge should share; but it "doubts the wisdom of putting the universities under State control, whatever be the Department that might be authorized to deal with them."

SIR J. RANKIN asked the Secretary of State for the Colonies (May 18) whether, with a view to facilitate the interchange of students between the universities in the United Kingdom and in the colonies, he would take into his consideration the desirability of issuing from time to time a circular letter to the British colonies somewhat after the manner of the letter of December 27, 1902, sent out by Lord Onslow, enclosing memoranda from any of the universities in the United Kingdom, stating their rules and regulations for the reception of colonial students, and inviting the colonies, on their part, to inform the universities of the United Kingdom and the Colonial Office what rules and regulations were laid down by their universities and technical schools for the reception of students from the universities of the United Kingdom. Mr. Lyttelton replied that the circular despatch of December 27, 1902, was sent in consequence of a communication received from the Vice-Chancellor of the University of Oxford, followed by a conference between the representatives of the universities and representatives of the colonies. He will be glad to give all possible assistance in the direction indicated to any university the authorities of which may express a desire for such action.

At the conference of the Parents' National Educational Union (May 19), Mrs. Husband, speaking on "Right and Wrong Kinds of Play," said the fault in children's play to-day was its lack of naturalness. This lack was taught them by their elders. The little ones in the "smart set" were made to be frankly artificial. They should be taught how best to amuse themselves for the development of good character. Dr. Blake Odgers, K.C., LL.D., who presided, was of opinion that when children returned home for their holidays they should be allowed to amuse themselves free from all restraint or guidance by adults. Speaking on "The Education of Citizens," Mr. W. Temple, Fellow of Queen's

College, Oxford, said that we were in a day of class warfare. There was hatred between worker and employer (in large combinations at least), and the duty of the teacher and the publicist was to educate this hatred out of existence. The Chairman dealt with the great political ignorance of the day. He did not believe that one man or woman in each thousand could give any idea of the difference between a Parish, a District, and a County Council. The same might be said about local government generally and about Great Britain's relations with her Colonies.

At the annual meeting of the Childhood Society for the Scientific Study of the Mental and Physical Conditions of Children (May 10), Prof. Armstrong, speaking on "Teaching Common Sense in the School of the Future," delivered another diatribe against the school of the present. Common sense, he said, was in reality, uncommon. More often than not school and college were destructive of common sense. The cry of the suffering child was only beginning to make itself heard. The worship of the academic had existed too long. Teaching had had no connexion with things outside the school. It was the games, rather than the lessons, which promoted alertness, individuality, and common sense under the present unfortunate system of education. He strongly approved Sir John Fisher's scheme of education for cadets—one-third of the time being given to literary study, one to scientific, and one to practical work.

LORD LONDONDERRY, speaking at the annual dinner of the Institution of Mining and Metallurgy (May 10), announced that the Government, with certain provisos, were willing to entrust to a committee the management of the Royal College of Science and School of Mines and other centres of higher technical education. This would have the effect of bringing the various colleges into very close connexion with each other, and would bring about much greater efficiency in this department of national education. He was further able to state that the Treasury would be willing to contribute some of the necessary funds in the shape of a substantial annual grant. It was the opinion of his lordship that pecuniary assistance should also be given by the various mining and metallurgical societies which would benefit so largely from the better training of the men on whom they depended for their expert work.

ARRANGEMENTS are approaching completion for an interesting orchestral performance at the Crystal Palace on the 10th of next month. Over seven hundred girls and boys, drawn exclusively from elementary schools within the metropolitan area—a large majority being under the jurisdiction of the Education Committee of the London County Council—have been chosen and are being organized in several centres with a view to presenting at the Crystal Palace on June 10 a programme of nearly a dozen pieces representing some of the best known composers, and requiring considerable technical skill for anything like acceptable execution. The undertaking is the outcome of a movement commenced about three years ago in a boys' school in Maidstone for teaching the violin. The progress achieved is sufficiently demonstrated by the fact that there are now over two thousand similar classes at work throughout the kingdom, and of that number the London schools are credited with some four hundred. The juveniles will be backed up by some thirty instruments of the Crystal Palace orchestra and the great organ, and Mr. W. W. Hedgcock has consented to conduct.

THE German colony in London, led by the London branch of the German Language Association, under the direction of its founder, Dr. Aloys Weiss, held festival at the Holborn Viaduct Hotel in commemoration of the centenary of Schiller. Prof. Günther Saalfeld, of Berlin, delivered an oration, emphasizing the debt the cause of freedom owes to Schiller, as well as the love and honour borne by his compatriots to his memory. He compared Schiller's fame to Shakespeare's and Goethe's, commented in cordial terms on English appreciation of Schiller, paid a graceful testimony to English friendship for Germany, and concluded with a spirited declamation of Freiligrath's poem on Schiller. There was a varied programme of music and recitations, including part-songs by the Forest Hill Choir, under the direction of Herr Otto Sondermann, German ballads by Frä. Magda Böttcher, dramatic recitations by Frä. von Driller and Herr Paul Wind, and brilliant pianoforte solos by Mlle. Janotha.

The "Hymn to Joy," sung by the whole assembly, concluded the proceedings.

THE jubilee of the Cheltenham Ladies' College was celebrated (May 12 and 13) by a concert, a commemoration service (conducted by the Bishop of Bristol), the presentation to the College of a marble bust of Miss Beale, and the opening (by Lord Londonderry) of a new wing of the buildings for science teaching. A few striking figures (says the *Cheltenham Examiner*) will assist the imagination to grasp how phenomenal has been the success of the Ladies' College. It began with a capital of £2,000. It now owns property which has cost upwards of £160,000, of which £100,000 is represented by College buildings and £60,000 by boarding houses, sanatorium, and playground. The annual income from tuition and boarding fees and from rents of property is £60,000, or nearly double that of twenty years ago, the great increase being chiefly under the head of rents. In contrast with the 100 pupils who assembled on that February morning 51 years since, the last annual report records an average of 390 boarders in the 12 college boarding houses, 200 in non-college houses, and, including kindergarten and by-students, a total under instruction of 1,000. There were in all 65 English teachers; 9 foreign teachers for French, German, and Italian, besides those engaged for the boarding houses; 840 pupils and 30 teachers in the musical department; 302 pupils and 9 teachers in the art and technical department; teachers for dancing, 2 for physical education, and many pupils for special gymnastics, swimming, and dancing. Of the educational results of the College system it is unnecessary to speak. Brilliant successes are obtained yearly in London University and other examinations. Among old pupils are noted names in literature and medicine; while a large number are scattered over the world as teachers and missionaries. Some twenty-five have become head mistresses of important schools.

PROF. RIDGEWAY writes to the *Times* (April 27) on "some points of paramount importance in the relations of the two old universities to secondary education which have not been touched in the recent discussion" on the Greek question. It is plain, he says, "that neither the abolition of compulsory Greek nor the introduction of the principle of bifurcation in studies would of itself effect any genuine improvement in the schools." He sums up thus:
